

目录

1 考点 1: 各类风险教训	2
题号 1 考察: Metallgesellschaft 和 Long-Term Capital Management (LTCM) 崩溃的共同属性 (不要先入为主选高杠杆)	2
题号 2 考察: 雷曼兄弟的案例。(巴克莱银行和美国银行最后并没有收购雷曼兄弟)	3
题号 3 考察: 北岩银行风险案例。(北岩银行的主要问题在于其资产与负债的期限不匹配)	3
题号 4 考察: 长期资本管理公司的模型风险。(并不涉及财务)	4
题号 5 考察: 伦敦鲸案例。(the garbage in made garbage out)	5
题号 6 考察: 长期资本管理公司和德国金属公司案例比较。(现金流危机是德国金属公司和长期资本管理公司共同的失败因素)	5
题号 7 考察: 巴林银行案例。(可以熟悉一下里森的失败策略)	6
题号 8 考察: 储蓄贷款危机、德国金属公司、长期资本管理公司和安然公司的案例。(综合考察)	6
题号 9 考察: LTCM 案例启示 (杠杆风险、保证金制度、市场流动性、相关性假设)	7
题号 10 考察: 安然案例对现代风险管理的启示。(公司治理和风险文化是风险管理的根本)	8
题号 11 考察: 德国金属公司案例。(MGRM 危机的核心问题: 流动性风险管理的失败。)	8
题号 12 考察: 巴林银行失败的原因。(尼克里森的流氓交易没有采用套利策略, 而是采取了更为激进的投机交易。)	9
题号 13 考察: 长期资本管理公司案例。(VaR 模型在极端市场条件下的局限性)	10
题号 14 考察: 复杂衍生品的风险及其对金融市场的影响。(出题太细了)	10
2 考点 2:07-09 金融危机	10
题号 1 考察: 对金融危机相关事件的理解。(CDO 的投资者无法保证没有信用风险)	11
题号 2 考察: 金融危机中房地产泡沫的成因。(评级机构提供了不切实际的高评级)	12
题号 3 考察: 2007 年金融危机期间短期批发融资市场冻结的后果及其对金融机构融资能力的影响。(Repo haircuts、OIS-Libor spread、Credit spreads on all credit assets)	12
题号 4 考察: 次贷危机中次级贷款违约率上升的根本原因。(补偿结构的系统性缺陷是核心问题)	13
题号 5 考察: 次贷危机的触发因素 (房价下跌效应、利率上升影响、OTD 模型问题、期限错配)	14
题号 6 考察: 次贷危机中证券化市场的结构性问题和信息不对称。(发起人直接接触借款人, 掌握第一手信息, 这种信息优势被用于协助伪造贷款材料, 导致大量不合格贷款进入证券化池。)	14
题号 7 考察: 评级机构在次贷危机中的问题 (存在数据依赖)	15
题号 8 考察: 信用衍生品和证券化产品在金融危机中的作用。(SIVs 的资产和负债到期日不匹配, 增加了融资风险)	15
题号 9 考察: 金融危机期间美联储和美国政府采取的稳定市场措施。(政府对金融机构的援助是关键措施之一)	16
题号 10 考察: 金融危机的流动性风险。(银行使用资产支持商业票据和回购协议的流动性风险。)	17
题号 11 考察: 理解金融危机期间各类证券化产品的表现特征。(次级抵押贷款支持证券收益率在 2007 年出现没有显著上升)	17
题号 12 考察: 流动性危机对金融市场的影响及其相关机制。(在危机期间, 回购市场的 haircut (折扣) 实际上是迅速增加的)	18
题号 13 考察: 对 CDO 结构和次级抵押贷款特征的理解。(不止政府债券可以当作抵押品)	18
题号 14 考察: 利率上升的原因及其对金融市场的影响。(贷款数量的增加并不必然导致利率上升)	19
题号 15 考察: 金融危机的主要原因及其影响。(注意使用和滥用)	19
3 考点 3:Securitization	20
题号 1 考察: 对 CDO 在信用风险转移中的优势和劣势的理解。(留意一下 CDO 平方这个概念)	20
题号 2 考察: 对传统信用风险缓解方法的理解。(教材提及了 6 个以及银团)	21
题号 3 考察: 银团贷款的特征及其风险管理功能。(银团贷款方式本身并不改变贷款的信用风险本质)	21
题号 4 考察: 对证券化优劣势的理解。(证券化过程不透明)	22
题号 5 考察: 对 OTD 模式的理解。(OTD 模式降低了银行监控借款人风险的动力)	23
题号 6 考察: 评级机构的问题。(“发行人付费”模式)	23
题号 7 考察: OTD 模式的优势和风险。(OTD 模式下, 风险实际上转移给了证券化产品的最终投资者, 而不是中间的投资银行, 投资银行主要作为证券化产品的承销商和做市商, 而非风险的最终承担者。)	24
题号 8 考察: CDS 特征 (CDS 不会产生基差风险)	25
题号 9 考察: 资产负债错配的定义和影响。(资产负债错配是指通过短期融资方式购买长期资产, 而不是通过短期融资购买短期资产。)	25

题号 10 考察: 信用风险转移的工具及其局限性。(净额结算、抵押品、第三方保险) 26

题号 11 考察: 抵押贷款证券化的特征及其复杂性。(证券化产品的分层结构具有不同的风险水平) 27

题号 12 考察: 商业票据及其相关风险和机制。(回购协议在破产程序中是被排除的。) 27

题号 13 考察: CDO 的特征和不同层级的特性。(权益分层在偿付顺序中处于最次级位置) 28

题号 14 考察: 资产证券化的收益分配。(优先级分层、夹层分层、权益分层) 28

1 考点 1：各类风险教训

1. In the late 1990s, both Metallgesellschaft and Long-Term Capital Management (LTCM) experienced significant financial difficulties that led to their collapse. Which of the following is a common attribute of the collapse at both Metallgesellschaft and LTCM?
- A. High leverage leading to increased financial risk exposure.
 - B. Employing relative value strategies to capture price discrepancies.
 - C. Using rolling short-term futures and OTC swaps to hedge risks.
 - D. Liquidity risk resulting in significant market value losses.

答案:D

解析:

A 选项错误。

- 高杠杆确实是 Long-Term Capital Management (LTCM) 的一个显著特点，但并不是 Metallgesellschaft 崩溃的共同属性。LTCM 在 1990 年代后期拥有 48 亿美元的股本和 1250 亿美元的资产，这转化为 25:1 的杠杆率。虽然 Metallgesellschaft 面临资金流动性风险，但其崩溃并不直接 with 高杠杆相关。因此，高杠杆并不是两者共同面临的问题之一。

B 选项错误。

- 采用相对价值策略虽然是 LTCM 的投资策略之一，但 Metallgesellschaft 的策略主要是使用滚动短期期货和场外掉期合约。

C 选项错误。

- 使用滚动短期期货和场外掉期合约是 Metallgesellschaft 的策略，但 LTCM 的崩溃主要是由于流动性危机和模型错误。文档中提到，LTCM 的失败是由于模型错误，管理层没有正确预测到在全球危机情况下相关性的增加。这表明，LTCM 的崩溃与特定的对冲策略关系不大，而是与模型风险和流动性危机相关。

D 选项正确。

- 流动性风险导致了 Metallgesellschaft 和 LTCM 的显著市场价值损失。LTCM 的资产价值在一个月内下跌了 40% 多，而 Metallgesellschaft 也面临了资金流动性风险。两者都因缺乏短期流动性而面临危机，最终导致了它们的崩溃。

考察: Metallgesellschaft 和 Long-Term Capital Management (LTCM) 崩溃的共同属性（不要先入为主选高杠杆）

2. A financial historian is examining the collapse of Lehman Brothers, which filed for bankruptcy on September 15, 2008. At the time, Lehman was the fourth-largest investment bank in the United States and became a symbol of the excesses of the 2007-08 Financial Crisis, resulting in an estimated \$10 trillion in lost economic output. Which of the following is not a description about the Lehman Brothers case?
- A. Lehman Brothers’ subsidiaries invested heavily in the securitized U.S. real estate market during the housing bubble.
 - B. Lehman Brothers’ large portfolio of mortgage-backed securities made it vulnerable to worsening market conditions.
 - C. Market liquidity dried up, preventing Lehman Brothers from rolling over its massive debt with short-term financing.
 - D. The acquisition of Lehman Brothers was completed by Barclays and Bank of America in the end.

答案:D

解析:

A 选项正确，不选。

- 在美国房地产泡沫形成期间，雷曼兄弟的子公司积极投资于证券化的房地产市场产品。这些投资包括大量的抵押贷款支持证券（MBS），这些证券在市场繁荣时提供了高回报，但在市场下滑时风险极大。

B 选项正确，不选。

- 雷曼兄弟持有的大量抵押贷款支持证券使其在市场条件恶化时极为脆弱。随着次贷危机的爆发，这些证券的价值大幅下跌，导致雷曼的资产负债表迅速恶化，财务状况不堪重负。

C 选项正确，不选。

- 在金融危机期间，市场流动性迅速枯竭，雷曼兄弟无法通过短期融资市场来展期其巨额债务。由于无法获得必要的流动性支持，雷曼兄弟面临严重的现金流危机，最终导致其无法继续运营。

D 选项错误。

- 尽管巴克莱银行和美国银行曾试图收购雷曼兄弟，但由于面临巨大的财务和法律风险，最终未能达成协议。雷曼兄弟的资产负债表复杂且不稳定，尤其是其持有的次级抵押贷款相关资产的价值极不稳定，导致收购谈判失败，雷曼兄弟最终破产。

考察: 雷曼兄弟的案例。(巴克莱银行和美国银行最后并没有收购雷曼兄弟)

3. A financial consultant is analyzing the collapse of Northern Rock, which relied heavily on an originate-to-distribute model, raising funds through securitizing mortgages, selling covered bonds, and utilizing wholesale interbank funding markets. After studying this case, which of the following lessons cannot be directly drawn from Northern Rock's failure?

- A. Banks can identify potential risk points in advance by simulating different liquidity stress tests, optimizing their asset-liability structure, and enhancing their ability to cope with crises.
- B. Banks should limit the increase of derivative positions to avoid raising leverage and liquidity risk.
- C. Banks need to establish comprehensive emergency liquidity plans to ensure quick access to funds when market liquidity dries up.
- D. Banks can reduce liquidity risk by shortening asset maturities and increasing the proportion of liquid assets.

答案:B

解析:

A 选项正确，不选。

- 流动性压力测试是银行管理流动性风险的重要工具。通过模拟不同的压力情景，银行可以提前识别潜在的风险点，优化资产负债结构，从而增强应对危机的能力。这一措施有助于银行在市场条件恶化时保持稳定。

B 选项错误。

- 虽然增加衍生品头寸可能会提高杠杆率和流动性风险，但这并不是北岩银行破产的主要原因。北岩银行的主要问题在于其资产与负债的期限不匹配，导致融资流动性风险。因此，限制衍生品头寸并不是从北岩案例中学到的关键教训。

C 选项正确，不选。

- 银行需要建立全面的紧急流动性计划，以确保在市场流动性枯竭时能够迅速获得资金支持。这样的计划可以帮助银行在面临突发流动性危机时维持运营，避免因资金短缺而陷入困境。

D 选项正确，不选。

- 通过缩短资产期限和增加流动性资产的比例，银行可以有效降低流动性风险。这种策略有助于银行在市场波动时保持更高的流动性，从而更好地应对资金需求的变化。

考察: 北岩银行风险案例。(北岩银行的主要问题在于其资产与负债的期限不匹配)

4. A financial analyst is delving into the Long-Term Capital Management (LTCM) case to understand the model risks that played a role in its collapse. Which of the following statements MOST LIKELY misrepresents the characteristics of model risk in the LTCM case?

- A. The model relies on assumptions that are not reflective of real-world conditions.
- B. The model does not align with the requirements of International Financial Reporting Standards.
- C. The model is unable to anticipate sudden and severe liquidity shortfalls.

D. The model significantly underestimates the correlation between asset classes during economic downturns.

答案:B

解析:

A 选项正确，不选。

- LTCM 的模型依赖于不切实际的假设，这些假设未能准确反映市场的真实情况。这种不合理的假设导致模型在市场条件变化时失效，是模型风险的一个例子。

B 选项错误。

- LTCM 案例中并没有涉及财务报表标准的问题。模型风险主要与模型假设和市场条件有关，而非财务报告标准。因此，选项 B 不是模型风险的例子。

C 选项正确，不选。

- LTCM 的模型未能预测到市场流动性在危机期间的突然枯竭。这种无法预见的流动性风险是模型风险的一个典型例子，因为模型未能考虑到市场条件的快速变化。

D 选项正确，不选。

- 在经济危机期间，LTCM 的模型显著低估了资产类别之间的相关性。这种低估导致风险被严重低估，是模型风险的一个关键因素，因为在危机中资产相关性往往会增加。

考察: 长期资本管理公司的模型风险。(并不涉及财务)

5. VaR modeling determines the potential for loss in the entity being assessed and the probability that the defined loss will occur. However, the misuse of VaR can lead to serious consequences and London whale is a case. Which of the following description is true?

- A. A.JPMorgan Chase 2019s CIO, concluded the VaR model was too conservative and overestimated the risk of its SCP, thus, CIO modified the VaR model by using a higher confidence level.
- B. The bankwide VaR limit of JPMorgan Chase was broken in the aftermath of CIO adopting the modified VaR, since the higher confidence level used in new model lowered the risk and promoted the increase of losses.
- C. In addition to manipulation of VaR model, the error-prone manual data entry, incorporating formula and calculation errors, made the VaR estimation of CIO more unreliable, the garbage in made garbage out.
- D. Financial institutions use VaR models to calculate regulatory capital and for internal risk management. The OCC (Office of the Comptroller of the Currency) allows banks under its supervision to develop their own VaR models used for regulatory purposes and approved the VaR model of CIO.

答案:C

解析:

A 选项错误。

- CIO 认为原先的 VaR 模型过于保守，高估了 SCP 的风险，因此修改了 VaR 模型。然而，选项 A 的描述错误，因为高估风险意味着置信水平较高，CIO 实际上应该采用更低的置信水平，而不是更高的。

B 选项错误。

- 在 CIO 采用修改后的 VaR 模型后，摩根大通的银行范围内 VaR 限额被打破。选项 B 的描述错误，因为新的 VaR 模型采用了更低的置信水平，这降低了风险测度，反而促进了损失的增加，而不是因为更高的置信水平。

C 选项正确。

- 除了操纵 VaR 模型外，CIO 还采用了容易出错的手动数据输入，包括公式和计算错误，这使得其 VaR 估计更加不可靠。错误的数据输入导致了不准确的输出，符合“垃圾输入，垃圾输出”的原则。

D 选项错误。

- 金融机构使用 VaR 模型来计算监管资本和进行内部风险管理。虽然 OCC 允许银行开发自己的 VaR 模型，但 CIO 的 VaR 模型并没有获得 OCC 的批准。选项 D 的描述错误，因为 CIO 的 VaR 模型实际上没有得到监管机构的认可。

考察: 伦敦鲸案例。(the garbage in made garbage out)

6. A financial analyst is comparing the collapses of Metallgesellschaft and Long-Term Capital Management (LTCM) to identify common factors that contributed to their failures. Which of the following is a common attribute of the collapse at both Metallgesellschaft and Long-Term Capital Management (LTCM)?

- A. Both companies encountered severe liquidity challenges due to significant losses in their derivative investment portfolios, necessitating urgent financial interventions to stabilize their operations.
- B. The strategies of both companies involved the use of substantial leverage in an attempt to enhance potential returns, which ultimately contributed to their financial instability.
- C. The collapse of both companies was associated with fraudulent activities, which played a role in undermining their financial integrity and operational trust.
- D. Both companies excessively relied on complex mathematical models, which failed to adequately capture the risks inherent in their financial strategies and market conditions.

答案:A

解析:

A 选项正确。

- 德国金属公司和长期资本管理公司都在衍生品市场进行了大量交易。由于衍生品头寸的亏损，这两家公司都需要追加保证金，导致了严重的现金流问题。这种现金流危机是两家公司共同的失败因素。

B 选项错误。

- 德国金属公司通过衍生品进行对冲，并未显著增加杠杆，而长期资本管理公司为了放大套利策略的收益，采取了高杠杆策略。因此，杠杆的使用在两家公司中并不相同。

C 选项错误。

- 德国金属公司和长期资本管理公司均不涉及欺诈行为。两家公司的失败并不是由于欺骗性行为，而是由于市场策略和风险管理的失败。

D 选项错误。

- 虽然 LTCM 过度依赖复杂的数学模型是其失败的原因之一，但德国金属公司的失败更多是由于复杂的套期保值策略和市场流动性问题。因此，模型依赖并不是两家公司共同的失败因素。

考察: 长期资本管理公司和德国金属公司案例比较。(现金流危机是德国金属公司和长期资本管理公司共同的失败因素)

7. During a risk management training session for new traders, the instructor discusses the collapse of Barings Bank in 1995 as a classic case of operational risk failure. The case highlights the importance of internal controls and supervision. Which of the following statements MOST accurately describes the key factors that led to Barings' bankruptcy?

- A. Nick Leeson is trying to recover from earlier trading losses by adopting a more conservative investment strategy.
- B. Nick Leeson managed to evade management supervision despite the bank's robust internal control systems.
- C. Nick Leeson faced huge losses due to the inversion of the interest rate curve.
- D. Nick Leeson's dual role at Barings allowed him to conceal trading losses from the management.

答案:D

解析:

A 选项错误。

- 为了弥补前期的亏损，尼克·里森采取了更为激进的投资策略，希望通过高风险交易来快速恢复损失。然而，这些策略在市场出现非预期状况时导致了更大的亏损，进一步加剧了巴林银行的财务危机。

B 选项错误。

- 巴林银行的管理层未能有效监督尼克·里森的交易活动，主要是由于公司内部控制系统的不足。这种缺乏监督的环境使得里森能够进行未经授权的投机交易，最终导致了巨额损失。

C 选项错误。

- 在巴林银行的案例中，利率曲线的形状并不是导致其失败的因素。选项 C 的描述与实际情况不符。尼克·里森的失败主要源于他在日经 225 指数期货和期权市场上的投机交易。他试图通过大规模的对冲和套利策略来弥补损失，但这些策略在市场波动时未能奏效，导致了巨额亏损。

D 选项正确。

- 尼克·里森在巴林银行同时担任交易员和办公室管理的双重角色，这使他能够掩盖交易损失。他利用这一职位的便利，隐藏了真实的财务状况，直到损失变得无法控制。

考察: 巴林银行案例。（可以熟悉一下里森的失败策略）

8. A financial analyst is reviewing several major financial disasters to understand the underlying causes and the role of corporate governance. Which of the following statements is incorrect?

- A. The Savings and Loan Crisis (S&L) was primarily caused by poor interest rate risk management, not by poor corporate governance.
- B. Metallgesellschaft's failure was not due to the misuse of complex financial instruments, but rather due to its hedging strategy and liquidity issues.
- C. Long-Term Capital Management (LTCM) did not suffer significant damage to its reputation because its failure was primarily due to model risk, not misconduct.
- D. Enron's collapse was primarily due to poor corporate governance and fraud, while Barings' collapse was due to rogue trading and lack of internal controls.

答案:B

解析:

A 选项正确。

- 储蓄贷款危机（S&L）主要是由于储蓄贷款机构未能有效管理利率风险，而非公司治理问题。利率的剧烈波动导致了这些机构的财务困境。

B 选项错误。

- 德国金属公司（Metallgesellschaft）的失败确实与复杂金融工具的使用有关。其复杂的套期保值策略和对冲操作未能如预期般运作，导致了流动性危机和巨额亏损。因此，选项 B 的说法不正确。

C 选项正确。

- 长期资本管理公司（LTCM）的失败主要是由于模型风险和市场极端波动，而非不当行为导致的声誉风险。其使用的金融模型未能准确预测市场变化，导致了巨额损失。

D 选项正确。

- 安然（Enron）的倒闭主要是由于公司治理失败和财务造假，而巴林银行（Barings）的倒闭是由于内部缺乏有效控制和流氓交易行为。这些事件都反映了公司治理和内部控制的重要性。

考察: 储蓄贷款危机、德国金属公司、长期资本管理公司和安然公司的案例。（综合考察）

9. A risk management consultant is giving a presentation to investment bank executives about lessons learned from historical market crises. When discussing the collapse of Long-Term Capital Management (LTCM) in 1998, which of the following lessons is correctly drawn from this case?

- A. During extreme crisis periods, correlations between assets tend to increase, though proper management can help reduce these correlations
- B. LTCM’s strategy involved buying one asset while selling another to profit from relative mispricing, considering scenarios of high market volatility
- C. The risks involved in LTCM’s operations included liquidity risk, model risk, and operational risk, all of which proved critical
- D. LTCM was allowed to refuse margin calls and only settle its profits and losses on a daily basis, enabling theoretically unlimited leverage that created liquidity risk during crisis

答案:D

解析:

A 选项错误。

- 在市场危机时期，资产相关性的突然上升是系统性现象，这种”相关性击穿”现象不是机构层面的风险管理所能控制的，LTCM 的失败恰恰证明了在极端市场条件下分散化策略的失效。

B 选项错误。

- LTCM 的相对价值策略过于依赖正常市场条件下的价格关系，他们的模型没有充分考虑市场流动性枯竭时期的极端情况，这种策略在市场剧烈波动时会导致严重损失。

C 选项错误。

- LTCM 主要面临的是流动性风险、模型风险和尾部风险，操作风险不是 LTCM 失败的主要原因。

D 选项正确。

- Long-Term Capital Management (LTCM) 在危机爆发前的财务杠杆超过 25 倍，并且 LTCM 被容许拒绝交纳保证金，只每日清算盈亏。这使得理论上而言，LTCM 可以使用无限制的杠杆。LTCM 在危机爆发前的财务杠杆超过 25 倍。如果 LTCM 的贷款人始终如一地要求应用杠杆时提交初始保证金，LTCM 可能就不会享受到如此高的杠杆水平，这也会为短期流动性危机提供一个缓冲。

考察: LTCM 案例启示（杠杆风险、保证金制度、市场流动性、相关性假设）

10. As part of a corporate governance training program for new board members, you are discussing historical corporate failures. The case of Enron is presented as a cautionary tale. Which of the following best describes the key risk management lessons learned from the Enron scandal?

- A. Complex financial structures and off-balance-sheet vehicles can be used legitimately for risk management, as long as they are properly disclosed and monitored.
- B. Strong financial performance metrics and innovative business strategies can compensate for weaknesses in corporate governance and internal controls.
- C. The primary responsibility of risk management is to ensure business growth and market expansion, while compliance can be handled by external auditors.
- D. A company’s risk culture and governance framework are more fundamental to risk management than sophisticated financial instruments or trading strategies.

答案:D

解析:

A 选项错误。

- 安然案例恰恰说明复杂的金融结构可能被用来掩盖真实风险，即使有披露，复杂的结构也可能使风险监控变得困难，过度复杂的金融安排往往是风险管理失效的警示信号。

B 选项错误。

- 安然的财务业绩本身就是通过造假产生的，没有良好的公司治理，任何商业策略最终都会失败，不能用表面的成功来掩盖基础控制的缺失。

C 选项错误。

- 风险管理不能仅关注业务增长而忽视合规，外部审计只是控制体系的一部分，不能完全依赖。

D 选项正确。

- 安然的失败根源在于公司治理的缺失和不当的风险文化，再复杂的金融工具也无法替代基础的风险管理框架，良好的风险文化是有效风险管理的基础。

考察: 安然案例对现代风险管理的启示。（公司治理和风险文化是风险管理的根本）

11. You are a risk management consultant reviewing historical commodity hedging failures for a trading firm. The case of Metallgesellschaft (MGRM) in 1993 is presented as a cautionary tale. Which of the following best describes the critical risk management failures that led to MGRM's crisis?

- A. The company's primary mistake was misunderstanding basis risk, as they failed to anticipate how their hedging strategy would perform when the futures curve shifted from backwardation to contango.
- B. The fundamental issue was inadequate liquidity planning, as the company's hedging strategy required substantial cash for margin calls despite the theoretical effectiveness of the hedge.
- C. The crisis occurred because MGRM took short positions in oil futures while maintaining long-term delivery commitments to customers, exposing them to rising oil prices.
- D. The main problem was accounting treatment, as the company recognized gains on long-term customer contracts immediately while deferring losses on their hedging positions.

答案:B

解析:

A 选项错误。

- MGRM 确实面临价格曲线风险，但这与基差风险是不同的概念。基差风险指现货与期货价格之间价差的不确定性。实际情况是价格曲线从 backwardation（现货价格高于期货）转向 contango（期货价格高于现货），这影响了滚动对冲策略的有效性，但不是危机的主要原因。

B 选项正确。

- 这准确描述了 MGRM 危机的核心问题：流动性风险管理的失败。虽然对冲策略在理论上是有效的，但公司低估了维持策略所需的现金流要求，当期货价格变动导致大量保证金追缴时，公司无法筹集足够资金，最终被迫提前平仓，导致巨额损失，这证明了流动性规划对对冲策略的重要性。

C 选项错误。

- 该选项完全误解了 MGRM 的头寸方向。MGRM 实际上是持有期货多头头寸，而不是空头。1993 年现货价格下跌（而不是上涨）导致了保证金追缴。

D 选项错误。

- 这个说法对 MGRM 的会计处理方式存在根本性误解。MGRM 的长期客户合同收益是在实际交付时（5-10 年后）确认，而不是在签订合同时立即确认。对冲头寸的损益也是按照正常会计准则处理，不存在刻意延迟确认损失的情况。

考察: 德国金属公司案例。（MGRM 危机的核心问题：流动性风险管理的失败。）

12. During a risk management training session for new traders, the instructor discusses the collapse of Barings Bank in 1995 as a classic case of operational risk failure. The case highlights the importance of internal controls and supervision. Which of the following statements accurately describes the key factors that led to Barings' bankruptcy?

- A. Leeson implemented an arbitrage strategy by taking long positions in potentially undervalued securities and short positions in potentially overvalued securities.
- B. Barings' management mistakenly believed that the high-level profits reported from Leeson's operations were reasonable given his involvement in high-risk derivatives trading.
- C. Trading performance should be evaluated based on final outcomes rather than isolated periods during the holding duration.
- D. Leeson consistently executed an arbitrage strategy aimed at exploiting price differentials between Nikkei futures contracts listed on SIMEX and other exchanges.

答案:C

解析:

A 选项错误。

- 这描述的是传统的套利交易策略，但 Leeson 的实际操作完全不同，Leeson 实际上进行的是单向的投机交易，主要是建立多头头寸，他没有按照正常的套利策略进行对冲，而是承担了巨大的方向性风险。

B 选项错误。

- 这与事实相反。巴林银行的管理层本应对高利润业务保持警惕性，尤其是当 Leeson 声称这些利润来自低风险的套利交易时，高额利润与低风险套利策略之间的不匹配应该引起管理层的注意和调查，管理层错误地接受了这种不合理的解释，反映了风险监督的严重缺陷。

C 选项正确。

- 这揭示了巴林银行失败的根本原因：缺乏有效的内部控制，特别是前台交易（front office）和后台清算（back office）职责未能有效分离，导致尼克里森同时控制这两个职能，使他能够隐藏损失并继续进行未经授权的交易。

D 选项错误。

- 这是对 Leeson 交易行为的错误描述，他并非在进行真正的套利交易，实际上，他在掩盖早期损失的过程中，逐渐增加了投机性交易的规模，最终，市场的不利变动导致了巨额损失。

考察: 巴林银行失败的原因。（尼克里森的流氓交易没有采用套利策略，而是采取了更为激进的投机交易。）

13. A risk management professor is discussing the lessons learned from LTCM's collapse with a group of graduate students. The professor emphasizes that even sophisticated quantitative models can fail catastrophically under extreme market conditions. Among the following statements about LTCM's risk management practices, which one correctly illustrates this point?

- A. LTCM used VaR models as part of its risk control framework, considering VaR as a measure of worst-case losses for investments that would apply under any market conditions.
- B. LTCM used a 10-day time horizon for determining hedge fund VaR, which proved to be too short for accurately assessing hedge fund risk exposure.
- C. LTCM's high profits in its early years were attributed to its modeling approach that fully accounted for asset correlations and liquidity considerations.
- D. LTCM's stress testing models incorporated illiquid trading scenarios and calculated a worst-case loss estimate of \$3 billion for the portfolio.

答案:B

解析:

A 选项错误。

- VaR 模型仅适用于正常市场条件下，给定置信水平和时间范围内的最大损失估计，在市场剧烈波动时期，VaR 模型的预测能力显著下降，LTCM 的失败恰恰证明了过度依赖 VaR 模型的危险性。

B 选项正确。

- LTCM 采用 10 天作为 VaR 计算期限，这一时间跨度过短，无法准确反映市场在极端条件下的表现。
- 在实际危机中，市场压力往往持续数周或数月，而 LTCM 的模型仅考虑了短期波动，未能预见到危机期间资产相关性会显著上升。

C 选项错误。

- LTCM 的模型在极端市场条件下完全失效，未能预见到危机期间资产相关性会显著上升。市场流动性急剧下降的影响被严重低估。

D 选项错误。

- LTCM 的压力测试存在严重缺陷，仅考虑了 12 笔最大交易，忽视了众多流动性较差的头寸。风险模型未充分考虑流动性风险和主权债券违约风险。使用的历史数据期限过短，导致严重低估了实际风险。

考察: 长期资本管理公司案例。（VaR 模型在极端市场条件下的局限性）

14. In a financial regulatory meeting, officials are reviewing past incidents related to the misuse of complex derivatives and their impact on the financial system. Which of the following cases is NOT caused by the improper use of complex derivatives?

- A. Procter & Gamble and Bankers Trust signed an interest rate swap.
- B. Orange County entered into a risky interest-rate bet embedded in securities bought by the fund.
- C. Sachsen Landesbank opened a unit in Dublin tasked with setting up vehicles to hold large volumes of highly rated U.S. mortgage-backed securities.
- D. Metallgesellschaft used short-term long position futures to hedge long-term contracts.

答案:C

解析:

A 选项错误。

- Procter & Gamble 与 Bankers Trust 签署的利率互换协议在当时引发了争议，主要是由于对复杂衍生品的误用，导致了巨额损失。

B 选项错误。

- Orange County 的投资策略涉及高风险的利率赌注，这种做法与复杂衍生品的误用密切相关，最终导致了该县的破产。

C 选项正确。

- Sachsen Landesbank 在都柏林设立的单位主要负责管理高评级的美国抵押贷款支持证券，这种做法本身并不涉及复杂衍生品的误用。

D 选项错误。

- Metallgesellschaft 使用短期多头期货合约来对冲长期合同，这种策略的实施不当导致了巨大的财务损失，反映了复杂衍生品使用中的风险。

考察: 复杂衍生品的风险及其对金融市场的影响。（出题太细了）

2 考点 2:07-09 金融危机

1. A risk consultant is reviewing the role of securitization in the 2007 credit crisis to better understand the lessons learned as a result of the crisis. Which of the following correctly describes the mortgage securitization market?

- A. The originator’s informational advantage over the arranger primarily led to improved loan quality assessment and more accurate risk evaluation.

- B. Credit default swaps provided complete protection for CDO investors during the crisis by transferring all credit risk to swap counterparties.
- C. Rating agencies maintained strict rating standards for structured products despite competitive pressures in the market.
- D. Securitization replaced the traditional banking model with a "originate-to-distribute" model, fundamentally changing risk transfer mechanisms.

答案:D

解析:

A 选项错误。

- 发起人确实比安排人拥有信息优势，但这种优势实际上导致了不当行为，如协助借款人提交虚假贷款申请。这种信息不对称并没有改善贷款质量评估，反而加剧了风险。

B 选项错误。

- CDS 并不能提供完全的信用风险保护，因为在危机期间，CDS 的交易对手也面临违约风险。这种保护的有效性受到交易对手信用风险的限制，如 AIG 的案例所示。

C 选项错误。

- 评级机构在市场竞争压力下实际上降低了评级标准，为了维持市场份额和收入，它们倾向于给予结构化产品过于乐观的评级。

D 选项正确。

- 证券化确实从根本上改变了银行业务模式，从传统的"持有到期"转变为"发放后分销"模式。这种转变确实改变了风险转移机制，使得发起机构能够将信用风险转移给投资者，这是对证券化市场的准确描述。

考察: 对金融危机相关事件的理解。（CDO 的投资者无法保证没有信用风险）

2. A financial analyst is studying the factors that led to the housing bubble in the pre-crisis period (2004-2006) to better understand the credit crunch of 2007-2008. Which of the following statements about these factors is correct?

- A. The Federal Reserve's contractionary monetary policy combined with reduced global capital inflows led to interest rate elevation, exacerbating borrower default probabilities.
- B. Credit assessment criteria across lending institutions became excessively stringent, creating refinancing liquidity constraints for a substantial portion of borrowers.
- C. Banks maintained their traditional "originate-to-hold" model, ensuring comprehensive risk assessment protocols for mortgage applications.
- D. Rating agencies assigned increasingly higher ratings to structured products, with senior CDO tranches typically receiving AAA ratings despite the deteriorating quality of underlying assets.

答案:D

解析:

A 选项错误。

- 实际上，2004-2006 年期间，国外大量资本流入和美联储的宽松货币政策共同导致了低利率环境，这种环境助长了房地产市场的过热。美联储的政策在当时是明显偏向宽松的。

B 选项错误。

- 在危机前期，贷款机构大幅放宽了信贷标准，对借款人的信用评估程序变得更加宽松，使得大量信用较差的借款人也能获得抵押贷款，这增加了市场的系统性风险。

C 选项错误。

- 这与事实相反。银行实际上从传统的”持有到期”模式转向了”发放后分销”模式，通过证券化将贷款打包、分层并出售给投资者，这种转变显著改变了风险的分布方式。

D 选项正确。

- 这准确描述了危机前期评级机构的行为。在市场竞争压力下，评级机构不断提高对结构化产品的评级，大量质量堪忧的 CDO 获得了 AAA 评级。这种评级通常无法反映底层资产日益恶化的风险状况，最终成为危机的重要诱因之一。

考察: 金融危机中房地产泡沫的成因。(评级机构提供了不切实际的高评级)

3. A risk analyst at a fixed-income investment firm is currently evaluating the impact of the 2007 financial crisis on short-term wholesale funding markets. As the markets began to freeze, the analyst is examining the actual consequences that emerged during this freeze. Which of the following statements MOST LIKELY misrepresents a direct consequence of this market freeze?

- A. Financing through short-term methods like repo haircuts required higher collateral values during the crisis, meaning more valuable assets were needed to secure the same amount of funding compared to normal market conditions.
- B. The spread between the OIS (overnight index swap) rate and Libor widened significantly during the crisis, indicating a substantial increase in credit risk.
- C. Credit spreads on all credit assets widened due to increased credit risk, leading to a decrease in the prices of these assets.
- D. The availability of long-term financing increased as institutions sought to stabilize their funding sources.

答案:D

解析:

A 选项正确，不选。

- 在危机期间，通过回购这种短期融资方式进行融资时，用作抵押品的资产价值折价升高。这意味着，为了获得同样的融资，金融机构需要提供更高价值的抵押品。

B 选项正确，不选。

- OIS 和 Libor 之间的利差在危机期间大幅升高，反映了市场对信用风险的担忧加剧。OIS 利率代表中央银行的基准利率，而 Libor 反映银行间短期无担保贷款的平均利率。

C 选项正确，不选。

- 所有信用资产的信用利差变大，这是由于信用风险增加，导致这些资产的价格下降。投资者要求更高的收益率来补偿增加的风险。

D 选项错误。

- 在危机期间，短期批发融资市场的冻结导致流动性枯竭，实际上减少了长期融资的可用性。金融机构面临更大的融资压力，而不是更稳定的资金来源。

考察: 2007 年金融危机期间短期批发融资市场冻结的后果及其对金融机构融资能力的影响。(Repo haircuts、OIS-Libor spread、Credit spreads on all credit assets)

4. A housing market researcher is analyzing the factors that contributed to the rise in delinquencies on adjustable-rate subprime mortgages in 2007. By August of that year, the rate of serious delinquencies had approached 16%. Which of the following statements MOST DIRECTLY contributed to the increase in subprime mortgage delinquencies?

- A. The borrower’s inherent credit quality was partially weak, and some mortgages were occasionally undercollateralized.
- B. The compensation structure for mortgage origination fundamentally focused on quantity over quality, creating a systematic incentive misalignment throughout the industry.
- C. The high demand for subprime mortgage products indirectly led to some questionable practices in certain cases.
- D. Brokers initiating trades generally had limited incentives to conduct thorough due diligence.

答案:B

解析:

A 选项部分正确，但不是最主要因素。

- 虽然借款人的信用质量和抵押不足确实存在，但这更多是其他因素导致的结果，而非根本原因。银行放宽贷款标准是由于激励机制的问题。

B 选项最准确。

- 这揭示了问题的核心：补偿结构的根本性缺陷直接导致了整个行业的系统性风险。基于数量的补偿机制是驱动其他问题的主要源头，它从根本上扭曲了贷款发放的标准，是次贷危机最直接的推动因素。

C 选项部分正确，但影响较间接。

- 市场需求的增加确实影响了贷款实践，但这种影响是通过激励机制的扭曲而实现的，属于次要因素。

D 选项部分正确，但是结果而非原因。

- 经纪人缺乏进行尽职调查的动机，实际上是补偿结构不当的直接后果，而非独立的主要原因。

考察: 次贷危机中次级贷款违约率上升的根本原因。(补偿结构的系统性缺陷是核心问题)

5. A risk analyst is preparing a presentation on the lessons learned from the 2007-2009 financial crisis. When analyzing the triggers of the crisis that began in the US subprime mortgage market and led to the collapse of Lehman Brothers in September 2008, which of the following statements is NOT correct about the crisis triggers?

- A. When housing prices began to fall in 2006, homeowners' equity diminished or disappeared, encouraging them to refinance for lower monthly payments or cash extraction.
- B. Subprime mortgages typically featured high interest rates and adjustable rates (ARMs), leading to increased defaults when interest rates rose.
- C. The originate-to-distribute (OTD) model reduced banks' incentives to conduct proper due diligence on mortgage applications.
- D. Banks increasingly relied on short-term funding for their long-term assets, creating significant maturity mismatches.

答案:A

解析:

A 选项错误。

- 该选项完全误解了房价下跌对再融资和提前还款的影响。在房价上涨期间，房主可以利用房屋增值的权益进行再融资，以获得更低的利率或提取现金。但当房价下跌时，房主的房屋权益减少或消失，实际上限制而非鼓励了他们的再融资能力，因为他们失去了再融资所需的抵押品价值，这导致提前还款能力显著下降。

B 选项正确。

- 2004-2006 年间美联储连续加息导致 ARM 利率显著上升，次贷的高利率和可调利率特征直接导致借款人还款负担急剧增加，引发大规模违约。

C 选项正确。

- OTD 模型允许贷款发起机构将风险转移给投资者，这显著降低了银行对贷款申请人进行严格审查的动力，最终导致次级贷款质量整体下滑。

D 选项正确。

- 银行大量使用短期融资支持长期资产的做法造成严重的期限错配，当市场压力出现时，这种错配导致流动性风险急剧上升，并在短期融资市场冻结时引发危机。

考察: 次贷危机的触发因素（房价下跌效应、利率上升影响、OTD 模型问题、期限错配）

6. As an analyst for a financial regulator, you are reviewing the problems with asset securitization during the 2008 financial crisis. Which of the following descriptions of the failure of the securitisation market in the subprime crisis is true?

- A. Credit rating agencies were paid by investors to rate securitization products, which created conflicts of interest in the rating process.
- B. The AAA-rated tranches of securitization products remained safe during the crisis due to their senior position in the payment structure.
- C. The teaser rate structure of subprime mortgages, with low initial rates followed by higher rates, effectively prevented borrower defaults.
- D. The originators had informational advantages over arrangers, which enabled them to collaborate with subprime borrowers in submitting false loan applications.

答案:D

解析:

A 选项错误。

- 评级费用实际是由证券化产品的发起人支付，而非投资者，这种” 发行人付费” 模式才是导致利益冲突的根本原因。

B 选项错误。

- AAA 级产品在危机中同样遭受重大损失，底层资产质量问题影响了整个证券化结构，优先偿付顺序并不能完全保护高级别证券。

C 选项错误。

- 诱导性低利率实际增加了违约风险，利率上调后借款人还款压力剧增，这种贷款结构反而加剧了违约问题。

D 选项正确。

- 发放贷款的银行和抵押贷款公司（发起人）直接接触贷款申请者，这些机构利用信息优势，帮助信用不佳的借款人伪造收入证明等材料，由于” 发放即出售” 模式，发起人没有动力严格审核，导致大量劣质贷款被证券化。

考察: 次贷危机中证券化市场的结构性问题和信息不对称。（发起人直接接触借款人，掌握第一手信息，这种信息优势被用于协助伪造贷款材料，导致大量不合格贷款进入证券化池。）

7. As a financial regulator investigating the 2008 crisis, you are examining the role of credit rating agencies in the securitization process. Which of the following statements accurately describes the issues with rating agencies during the subprime crisis?

- A. The limited historical data for subprime mortgages was beneficial for rating agencies, as recent data better reflected current market conditions and provided more reliable ratings.
- B. The rating methodologies relied heavily on historical data and failed to capture the significant changes in underlying asset characteristics during the pre-crisis period.
- C. Rating agencies maintained independence by collecting and analyzing their own data, rather than relying on information provided by issuers and arrangers.
- D. Under the issuer-pay model, rating agencies competed by implementing stricter credit enhancement requirements, resulting in fewer AAA-rated securitized products.

答案:B

解析:

A 选项错误。

- 次级抵押贷款数据历史短是重大缺陷，无法进行完整的风险评估，缺乏完整经济周期的数据，导致评级机构低估了违约风险。

B 选项正确。

- 评级方法过度依赖历史数据，未能反映当时房贷市场的重大变化，忽视了放贷标准下降、房价泡沫等新出现的风险因素。

C 选项错误。

- 评级机构主要依赖发行人和安排人提供的数据，缺乏独立验证，没有进行充分的尽职调查，对数据质量缺乏有效监控。

D 选项错误。

- ” 发行人付费” 模式导致评级机构降低标准以争取业务，实际上是通过降低信用增级要求来使更多产品获得 AAA 评级。

考察: 评级机构在次贷危机中的问题（存在数据依赖）

8. A credit manager at a bank is holding a seminar for a group of newly hired credit analysts about the role of credit derivatives in the 2007 - 2009 financial crisis. The manager highlights the role of securitized products such as structured investment vehicles (SIVs) and asset-backed commercial paper conduits in the crisis. Which of the following statements is correct regarding the 2007-2009 financial crisis?

- A. Rating agencies adequately reviewed granular credit data to generate accurate credit ratings for securitizations but were overwhelmed by the total number of securities issued.
- B. Banks issued large volumes of off-balance sheet conduits, which initially increased their regulatory capital requirements but reduced their financial flexibility.
- C. Banks sold off all their inventory of asset-backed loans to investors, but investors exercised put options to sell these securities back to the banks as the volume of defaults increased.
- D. Some SIVs held by banks had a mismatch between the maturities of their assets and liabilities, which increased the banks' funding risk.

答案:D

解析:

A 选项错误。

- 评级机构在评估次级抵押贷款时面临重大挑战，主要是因为缺乏足够的历史数据来进行全面的风险评估。这导致它们低估了潜在的违约风险，未能准确反映市场的真实情况。

B 选项错误。

- 虽然银行确实发行了大量的表外工具，但这并不一定导致监管资本要求的增加。实际上，这些工具通常使银行在资本管理上更具灵活性，能够更好地应对市场变化。

C 选项错误。

- 银行并没有将所有资产支持贷款的库存出售给投资者。相反，随着违约数量的增加，银行在管理这些资产时面临越来越大的挑战，导致流动性问题。

D 选项正确。

- 一些 SIVs 确实存在资产和负债到期日不匹配的情况。这种不匹配增加了银行的融资风险，因为在市场波动时，银行可能无法及时满足其资金需求。

考察: 信用衍生品和证券化产品在金融危机中的作用。（SIVs 的资产和负债到期日不匹配，增加了融资风险）

9. In response to the liquidity issues during the financial crisis, the Federal Reserve and the U.S. government implemented several measures to stabilize the financial markets. Which of the following statements accurately describes a measure implemented during this period?

- A. The Federal Reserve maintained high interest rates to ensure market stability and prevent excessive monetary stimulus.
- B. Providing financial assistance to major financial institutions to prevent their collapse.

- C. The discount window operations were expanded to include all financial institutions under standardized lending criteria.
- D. The Federal Reserve’s asset purchase program primarily focused on high-yield corporate bonds to support market liquidity.

答案:B

解析:

A 选项错误。

- 美联储在危机期间采取了积极的降息政策，将联邦基金利率从 2007 年的 5.25% 逐步降至 2008 年底的 0-0.25% 的历史低位。这种大规模降息政策旨在降低借贷成本，提供充足的市场流动性，并刺激经济增长。

B 选项正确。

- 在金融危机期间，美国政府和美联储实施了多项重要的救助计划，例如通过 7000 亿美元的问题资产救助计划（TARP）向主要金融机构注资，对 AIG 提供 850 亿美元的紧急贷款，接管房利美和房地美以稳定抵押贷款市场，这些措施有效防止了金融体系的系统性崩溃。

C 选项错误。

- 虽然美联储确实扩大了贴现窗口的使用范围，首次允许投资银行通过初级交易商信贷便利（PDCF）获得贴现窗口贷款，但这种扩展是有限的且有严格条件的：
 - 并非所有金融机构都能获得贴现窗口便利
 - 不同类型机构面临不同的贷款标准和条件
 - 需要提供合格抵押品且接受更严格的监管

D 选项错误。

- 美联储的资产购买计划（量化宽松）主要集中在国债（Treasury securities）、机构债券（Agency debt）和机构抵押贷款支持证券（Agency MBS），而不是高收益公司债券。这些购买旨在降低长期利率，支持抵押贷款市场，而非直接干预高风险债券市场。

考察: 金融危机期间美联储和美国政府采取的稳定市场措施。（政府对金融机构的援助是关键措施之一）

10. During a financial stability conference, experts discuss the implications of banks using asset-backed commercial paper (ABCP) and repurchase agreements (repos) for funding. What is the main cause of the issues arising from these practices?

- A. Commercial paper was not secured, increasing credit risk.
- B. Banks faced liquidity risk because short-term funding sources could become unavailable in times of crisis.
- C. The maturity of the debt exceeded the maturity of the assets, leading to maturity mismatches.
- D. Rating agencies provided overly optimistic ratings for these assets, masking the underlying risks.

答案:B

解析:

A 选项错误。

- 虽然商业票据可能没有担保，但这并不是导致问题的主要原因。问题的核心在于流动性风险，而非信用风险。

B 选项正确。

- 银行依赖短期资金来源（如 ABCP 和 repos）来为长期资产提供资金，这使得在危机时，短期资金可能会中断，导致流动性风险的增加。

C 选项错误。

- 尽管期限错配可能是一个问题，但在此情况下，主要问题是流动性风险，而不是期限错配本身。

D 选项错误。

- 虽然评级机构可能提供了不切实际的高评级，但这并不是导致问题的主要原因。问题的根本在于流动性风险。

考察: 金融危机的流动性风险。（银行使用资产支持商业票据和回购协议的流动性风险。）

11. During a financial seminar focused on the causes of the Global Financial Crisis (GFC), experts discuss the role of collateralized debt obligations (CDOs) and subprime mortgage loans. Which of the following statements accurately describes a characteristic of these instruments during the crisis period?

- A. Prior to the Global Financial Crisis (GFC), many collateralized debt obligations (CDOs) were backed by subprime mortgage loans.
- B. In 2007, the yield on subprime mortgage-backed securities remained stable despite market turbulence.
- C. Structured investment vehicles primarily invested in high-quality, short-term assets, which helped maintain market stability during the crisis.
- D. The ABCP market demonstrated resilience throughout the crisis period due to its short-term nature and high-quality underlying assets.

答案:A

解析:

A 选项正确。

- 在金融危机之前，确实有许多次级抵押贷款被打包并证券化为担保债务凭证（CDOs），这使得这些高风险资产在市场上流通。

B 选项错误。

- 2007 年，随着市场对次级抵押贷款的风险认识加深，收益率实际上并没有显著上升，反而在市场不稳定的情况下，许多投资者对这些资产的信心下降，导致收益率波动。

C 选项错误。

- 结构性投资工具实际上投资了大量的长期、复杂和高风险资产，这些资产在危机期间流动性严重不足，加剧了市场的不稳定性。

D 选项错误。

- ABCP 市场在危机期间出现严重的流动性问题，投资者对这些工具失去信心，导致市场几近崩溃，而不是表现出韧性。

考察: 理解金融危机期间各类证券化产品的表现特征。（次级抵押贷款支持证券收益率在 2007 年出现没有显著上升）

12. During the financial crisis, banks faced significant challenges in the short-term wholesale debt market, particularly with repurchase agreements and commercial paper. Which of the following statements about the liquidity crunch is correct?

- A. Credit ratings of ABCP market demonstrated an upward trend during the crisis, enhancing banks' short-term financing capabilities and liquidity management efficiency.
- B. Banks transferred off-balance-sheet assets to Non-SIVs for ABCP issuance to optimize their balance sheet structure.
- C. The haircut rates in the repo market showed a gradual upward trend during the crisis period.
- D. Market credit spreads widened significantly, leading to substantial declines in the market valuation of credit assets.

答案:D

解析:

A 选项错误。

- 在金融危机期间，许多银行发行的资产支持商业票据（ABCP）被降级，导致这些票据无法再用于短期融资，增加了银行的流动性压力。

B 选项错误。

- 银行确实将资产转移到结构性投资工具（SIVs）中，以便通过发行 ABCP 来融资购买长期资产。然而，随着危机的发展，这些 SIV 的信用质量下降，进一步加剧了流动性问题。

C 选项错误。

- 在危机期间，回购市场的 haircut（折扣）实际上是迅速增加的，而不是逐渐增加。这是因为投资者对抵押品的风险评估变得更加谨慎，导致对抵押品的折扣要求上升。

D 选项正确。

- 信用资产的信用利差在危机期间确实显著增加，这导致市场上信用资产的价格下降，反映了市场对风险的重新评估。

考察: 流动性危机对金融市场的影响及其相关机制。（在危机期间，回购市场的 haircut（折扣）实际上是迅速增加的）

13. A financial analyst at a major investment bank is reviewing the characteristics of various financial instruments that played significant roles in the 2008 financial crisis. During their analysis, they encounter several statements about subprime mortgages and repurchase agreements. Which of these statements accurately describes the characteristics of these instruments?

- A. Subprime mortgage structures typically feature low teaser rates combined with high down payments.
- B. Under the OTD model, losses on subprime mortgages are borne by the originating banks due to their guarantees on these loans.
- C. CDO trust partners pay one or more credit rating agencies to rate various tranches of CDO liabilities.
- D. Only government securities are eligible as collateral in repurchase transactions.

答案:C

解析:

A 选项错误。

- 次级抵押贷款虽然提供诱导性低利率，但通常要求较低的首付，有时甚至零首付。这种结构设计旨在降低借款人的入市门槛，但也增加了贷款的违约风险。

B 选项错误。

- 在发放即分销（OTD）模型下，银行将贷款打包并出售给投资者，贷款损失由最终持有者承担，而非发放贷款的银行。这种模式虽然转移了风险，但也可能导致贷款发放标准的松懈。

C 选项正确。

- CDO 信托合作伙伴确实需要支付评级机构对 CDO 各档次进行评级。这些评级为投资者提供了风险评估的重要参考，是 CDO 发行过程中的关键环节。

D 选项错误。

- 回购交易的合格抵押品范围广泛，包括但不限于政府证券、公司债券和资产支持证券等。这种灵活性使回购市场能够满足不同参与者的需求。

考察: 对 CDO 结构和次级抵押贷款特征的理解。（不止政府债券可以当作抵押品）

14. During a financial education seminar, a group of analysts are discussing common misconceptions about interest rate increases during the financial crisis. Which of the following statements represents a misunderstanding about the factors that drove interest rates higher during this period?

- A. Borrowers with weak credit quality lead to subprime mortgage transactions that are not sufficient, increasing the likelihood of defaults.
- B. A reduction in the willingness of homebuyers to purchase homes during a downturn in the housing market lowered financial flexibility, thereby increasing default risks.

- C. Many subprime mortgages included teaser rates, which were lower in the first two years but then increased significantly, potentially leading to defaults.
- D. The borrower's income composition led to increased loan origination volume, which was presumed to have a direct causal relationship with interest rate escalation.

答案:D

解析:

A 选项正确。

- 借款人信用质量弱确实导致了次级抵押贷款交易的风险增加。这种风险的上升直接影响了市场对这些贷款的信心，从而推动了利率的上升。

B 选项正确。

- 首付减少使得购房者在房价下跌时的财务灵活性降低，增加了违约风险。这种风险的增加促使贷款机构提高利率以补偿潜在的损失。

C 选项正确。

- 次级抵押贷款中包含的诱惑性利率在前两年较低，之后大幅上升。这种利率结构使得借款人在后期面临更高的还款压力，增加了违约的可能性，进而影响了市场利率。

D 选项错误。

- 尽管借款人的收入结构可能导致贷款数量增加，但这与利率的直接关系不大。贷款数量的增加并不必然导致利率上升，因此不是导致利率上升的直接原因。

考察: 利率上升的原因及其对金融市场的影响。(贷款数量的增加并不必然导致利率上升)

15. A risk analyst at a fixed-income investment firm is currently evaluating the factors that contributed to the 2007-2009 financial crisis. They are particularly interested in understanding the underlying causes of the crisis and how they relate to the financial instruments used at the time. Which of the following was not a direct cause of the financial crisis of the crisis?

- A. The use of credit derivatives significantly increased systemic risk in the financial system.
- B. Regulatory oversight was insufficient to manage the risks associated with complex financial products.
- C. Excessive speculation in the housing market led to unsustainable price increases.
- D. The resetting of interest rates on adjustable-rate mortgages caused widespread defaults among borrowers.

答案:A

解析:

A 选项正确。

- 信用衍生品的存在并没有直接导致 2007-2009 年的金融危机，但这些产品的滥用确实加剧了危机的严重性。投资者在使用信用衍生品时，往往是出于投机目的，而非有效的风险管理，这使得市场在危机时更加脆弱。因此，虽然信用衍生品增加了系统性风险，但它们的使用本身是中性的，滥用才是导致危机的关键因素。

B 选项错误。

- 监管不力是导致金融危机的一个重要因素。监管机构未能有效监控和管理金融市场中的复杂金融产品，尤其是在次贷市场和证券化产品方面。缺乏适当的监管使得高风险的贷款和投资行为得以蔓延，最终导致了市场的崩溃。

C 选项错误。

- 过度投机是金融危机的一个直接原因，尤其是在房地产市场。投资者和借款人对房价的持续上涨抱有过度乐观的预期，导致了大量高风险贷款的发放和房地产泡沫的形成。这种投机行为直接导致了市场的崩溃。

D 选项错误。

- 可调利率贷款的利率重置确实导致了許多借款人无法偿还贷款，从而加剧了危机。随着利率的上升，许多借款人面临更高的还款压力，导致违约率上升。这一现象是危机中不可忽视的直接因素。

考察: 金融危机的主要原因及其影响。(注意使用和滥用)

3 考点 3:Securitization

1. From the perspective of a bank, which of the following is not an advantage of using a collateralized debt obligation (CDO) to transfer credit risk?

- A. Bank profitability can be improved by increasing loan turnover rates significantly.
- B. Credit risk is effectively transferred to investors, which lowers the bank’s overall exposure.
- C. The added complexity of a CDO-square is raised to make marketing to investors more challenging, enhancing risk mitigation.
- D. A larger pool of potential borrowers will emerge due to relaxed lending and underwriting standards.

答案:C

解析:

A 选项正确，不选。

- CDO 的结构允许银行通过将贷款打包并证券化，从而增加贷款的周转率。这种循环使得银行能够不断发放新贷款，提升整体盈利能力，因此这个选项是一个优势。

B 选项正确，不选。

- CDO 通过证券化过程有效地将信用风险转移给投资者。银行将贷款打包成 CDO 并出售给投资者，从而降低自身的风险敞口，这使得银行能够更好地管理其资本和风险。

C 选项错误。

- CDO 的复杂性并不是为了增强风险缓解的潜力，而是为了使产品更具市场吸引力。通过将高风险贷款与低风险贷款捆绑在一起，CDO-squared 的设计旨在吸引投资者的兴趣。这种复杂性可能掩盖了潜在的风险特征，使得投资者在评估风险时可能出现误判，反而增加了整体风险。

D 选项正确，不选。

- CDO 的设计使得银行能够放宽贷款和承保标准，从而吸引更多的借款人。这种做法可以扩大潜在借款人的池，增加银行的市场份额，但也可能导致风险集中。

考察: 对 CDO 在信用风险转移中的优势和劣势的理解。（留意一下 CDO 平方这个概念）

2. A risk manager at a commercial bank is reviewing various strategies to mitigate credit risk associated with their loan portfolio. Which of the following is not a traditional credit risk mitigation approach commonly used by banks?

- A. Purchasing third-party insurance to cover potential borrower defaults.
- B. Implementing a call feature in loan agreements to manage default risk.
- C. Exposure netting to offset multiple exposures to the same counterparty.
- D. Requiring collateral from borrowers to secure loans and reduce credit risk.

答案:B

解析:

传统的信用风险缓解方法包括购买第三方保险 (Purchasing third-party insurance)、曝露净额 (Exposure netting)、按市值计价 (Marking-to-market)、要求抵押品 (Requiring collateral)、终止条款 (Termination clause) 和再分配 (Reassignment) 等。

A 选项正确，不选。

- 购买第三方保险是银行常用的信用风险缓解方法，可以直接对单个借款人或一组借款人进行保险。

B 选项错误。

- 实施回购条款（call feature）并不是传统的信用风险缓解方法，而是用于管理利率风险的工具。
- 回购条款允许借款人在利率下降时提前偿还贷款，从而降低未来利息支出。这种机制主要用于管理利率风险，而不是直接应对借款人违约的风险。

C 选项正确，不选。

- 曝露净额（exposure netting）是银行在面对同一对手方的多种风险产品时常用的做法，可以有效抵消风险。

D 选项正确，不选。

- 要求借款人提供抵押品是银行常用的信用风险缓解措施，可以降低信用风险暴露。

考察: 对传统信用风险缓解方法的理解。（教材提及了 6 个以及银团）

3. A risk manager at a commercial bank is reviewing their institution’s credit risk management strategies. After observing increased market volatility, they are particularly interested in loan syndication as a potential solution. During their analysis, they encounter several statements about this approach. Which of these statements accurately reflects the characteristics of loan syndication?

- A. The lead bank in syndication maintains primary responsibility for credit monitoring while participating banks focus on administrative duties.
- B. Syndicated lending does not by itself enable the transfer of specific risks, so the bank retains all the associated risks of the portion of the loan it holds.
- C. Syndication arrangements primarily operate through standardized structures, promoting market efficiency through uniformity.
- D. The lead bank’s compensation structure in syndication is primarily based on upfront fees, with minimal ongoing interest income considerations.

答案:B

解析:

A 选项错误。

- 在银团贷款中，所有参与银行都需要承担信用监控责任，而不是主要由牵头银行负责。参与银行需要独立评估和监控信用风险，而不仅仅关注行政职责。

B 选项错误。

- 银团贷款方式本身并不改变贷款的信用风险本质，只是改变了风险的分配方式。银团作为一个整体，仍然面临借款人违约的风险，但这个风险被分散到各个成员银行。
- 尽管风险被分散，但每个银行仍然需要承担它们各自承诺贷款份额的风险。如果借款人违约，每个银行都需要按照它们在银团中的份额来承担损失。

C 选项错误。

- 银团贷款安排通常是根据具体交易需求定制的，可以采用 firm commitment 或 best-efforts basis 等不同结构，而不是主要依赖标准化结构。这种灵活性是银团贷款的重要特征。
- 通常，银团中的牵头银行将保留大约 20% 的贷款，并找到一系列其他银行愿意持有剩下的 80%。

D 选项错误。

- 牵头银行的收入结构是多元化的，包括持续的利息收入（通常来自保留的 20% 贷款份额）和组织银团所得的费用收入。将收入来源简化为主要依赖前期费用是不准确的。

考察: 银团贷款的特征及其风险管理功能。（银团贷款方式本身并不改变贷款的信用风险本质）

4. A mortgage analyst at an investment bank is evaluating the securitization process of residential mortgage-backed securities (RMBS). During their analysis of the originate-to-distribute model, which of the following is not a strength of the securitization process?

- A. Originate-to-distribute model provides investors with new access to credit products, increasing opportunities for low-quality borrowers.

- B. Originate-to-distribute model allows credit and interest rate risks to be distributed among multiple market participants.
- C. Originate-to-distribute model ensures transparency in securitization, enabling investors to accurately understand their risk exposure.
- D. Originate-to-distribute model enables borrowers to access more credit products at lower borrowing costs in the financial market.

答案:C

解析:

A 选项正确，不选。

- 证券化过程确实为投资者提供了新的信贷产品投资渠道，同时也增加了低质量借款人获得贷款的机会。这使得原本可能无法获得贷款的借款人也能进入信贷市场。

B 选项正确，不选。

- 证券化的一个主要优势是能够将信用风险和利率风险分散给多个市场参与者。这种风险分散机制使得单个机构不必承担全部风险。

C 选项错误。

- 证券化过程实际上并不透明，投资者往往难以准确理解所承担的风险。复杂的结构化产品设计和多层次的证券化使得风险评估变得困难。
- 这种不透明性在 2008 年金融危机中起到了推波助澜的作用。

D 选项正确，不选。

- 通过证券化，借款人确实能够以更低的成本获得更多的信贷产品。这是因为风险的分散降低了整体融资成本。

考察: 对证券化优劣势的理解。（证券化过程不透明）

5. A regulatory advisor at a central bank has been studying the evolution of banking practices since the 2008 financial crisis. Their research focuses particularly on the originate-to-distribute (OTD) model. During their analysis, they encounter several evaluations of this model’s impact on financial stability. Which of these evaluations accurately reflects the nature of the OTD model and its effects on the banking system?

- A. The OTD model enhances banks’ risk monitoring capabilities by maintaining long-term relationships with borrowers through continuous asset holding.
- B. The OTD model primarily serves to optimize banks’ balance sheet structure, with risk retention remaining largely unchanged in the financial system.
- C. The OTD model allows originators to benefit from greater capital efficiency and lower short-term earnings volatility because it appears to spread credit risk and interest rate risk across many market participants.
- D. The OTD model promotes market stability through standardized risk assessment procedures and transparent pricing mechanisms.

答案:C

解析:

A 选项错误。

- OTD 模式实际上降低了银行监控借款人风险的动力，因为银行将贷款快速出售，不再保持长期的借贷关系。这种模式使银行对信用风险的敏感度降低，可能导致贷款发放标准的松懈。

B 选项错误。

- OTD 模式不仅改变了银行的资产负债表结构，更重要的是实现了风险的转移。银行通过证券化将风险转移给投资者，显著降低了自身的资本要求，但整个金融系统的风险水平并未降低，只是重新分配。

C 选项正确。

- OTD 模式确实让发起人从两个方面获益：首先是资本效率的提升，因为银行可以通过出售贷款来减少资本占用，提高资本使用效率；其次是短期收益波动性的降低，因为银行通过快速出售贷款获得即时收益，避免了持有期间可能面临的信用损失。
- 选项中使用”appears to spread”（看似分散）这个措辞非常准确，因为虽然信用风险和利率风险表面上被分散给了多个市场参与者，但实际上这些风险并未消失，只是被转移和重新分配。
- 这种模式在 2008 年金融危机中暴露出问题，因为当系统性风险出现时，看似分散的风险实际上产生了集中效应，导致市场大范围违约。

D 选项错误。

- OTD 模式下的结构化产品往往缺乏标准化的风险评估程序，定价机制也并不透明。产品的复杂性和定制化特征使得市场参与者难以准确评估风险，反而可能增加市场的不稳定性。

考察: 对 OTD 模式的理解。（OTD 模式降低了银行监控借款人风险的动力）

6. A financial regulator is reviewing the role of credit rating agencies in the securitization process, especially in light of the issues exposed during the financial crisis. Which of the following statements MOST LIKELY misrepresents the characteristics of the practices of these agencies?

- A. Credit rating agencies use an ”issuer-pays” business model, creating conflicts of interest with bond issuers.
- B. Agencies often rely on issuer-provided data, which may include misleading information to achieve desired ratings.
- C. The assumptions in rating models are flawed, failing to adapt to new financial products.
- D. Agencies were overly sensitive in identifying and warning about systemic risks.

答案:D

解析:

A 选项正确，不选。

- 评级机构采用“发行人付费”的商业模式，这意味着债券发行人支付评级费用。这种安排可能导致利益冲突，因为评级机构可能会受到发行人压力，给出更高的评级以维持业务关系，从而影响评级的客观性和准确性。

B 选项正确，不选。

- 评级机构在进行评级时，通常依赖于发行方提供的数据和资料，而不是进行独立的尽职调查。这种依赖可能导致发行方提供误导性信息，以获得更高的评级，进而影响投资者对产品风险的判断。

C 选项正确，不选。

- 评级模型通常基于历史数据和假设构建，但这些模型未能及时适应市场变化，尤其是在评估新型结构化产品时。旧模型的假设可能不再适用，导致评级结果与实际风险不符，未能准确反映市场的真实风险。

D 选项错误。

- 评级机构在金融危机前未能有效识别和预警系统性风险，表现出对风险的识别和预警不够敏感。相反，它们在危机前对风险的识别和预警不足，未能及时发出警告，导致投资者对市场风险的误判。

考察: 评级机构的问题。（“发行人付费”模式）

7. A financial analyst is evaluating the impact of securitization and the originate-to-distribute (OTD) model on financial markets. During a team discussion about the advantages and risks of these innovations, which of the following conclusions is correct?

- A. The OTD business model of bank loans transfers the risks arising from loans to the investment banks as sellers of securitized products.

- B. Due to the non-standardization and flexibility of the OTC market, it may be easier for borrowers to find investors willing to accept their specific risk characteristics.
- C. Because securitization products are initiated by banks, the risks are not high, especially when investors buy securitization products and then buy CDS, they can completely avoid risks.
- D. The transparency of securitization products is very high, and there are many similar products traded in the market, which provides a benchmark price for securitization products and promotes the active market of it.

答案:B

解析:

A 选项错误。

- OTD 模式下，风险实际上转移给了证券化产品的最终投资者，而不是中间的投资银行，投资银行主要作为证券化产品的承销商和做市商，而非风险的最终承担者。

B 选项正确。

- OTC 市场的灵活性使得证券化产品可以根据借款人和投资者的具体需求进行定制，这种灵活性降低了借款人的融资成本，同时扩大了投资者的投资选择范围。

C 选项错误。

- 银行发起证券化并不能保证产品风险较低，特别是在 OTD 模式下银行缺乏尽职调查的动力。CDS 只能部分对冲风险，且存在交易对手风险，无法实现完全避险。

D 选项错误。

- 证券化产品的底层资产复杂多样，透明度普遍较低，缺乏标准化和可比性，难以形成有效的市场定价基准。

考察: OTD 模式的优势和风险。(OTD 模式下，风险实际上转移给了证券化产品的最终投资者，而不是中间的投资银行，投资银行主要作为证券化产品的承销商和做市商，而非风险的最终承担者。)

8. A portfolio manager at a pension fund is considering using Credit Default Swaps (CDS) to hedge against potential defaults in their corporate bond portfolio. While discussing with the risk committee, they acknowledge that CDS offers better liquidity compared to trading the underlying bonds. However, they need to evaluate potential drawbacks. Which of the following represents a genuine disadvantage of using CDS?

- A. CDS introduces additional counterparty risk, particularly during stress periods when both the reference entity and protection seller might face difficulties.
- B. CDS creates basis risk because the fund needs to hold the exact bonds specified in the CDS contract.
- C. CDS only responds to actual default events and does not adjust in value when there is gradual credit quality deterioration.
- D. Unlike traditional bond markets, CDS markets lack price transparency and investors can only discover true prices when they unwind positions.

答案:A

解析:

A 选项正确。

- CDS 确实引入了新的交易对手风险，尤其在市场压力期间这种风险更显著,2008 年金融危机中 AIG 的例子证明了这一风险的重要性。

B 选项错误。

- CDS 不会产生基差风险,因为其最大优势就是不需要持有底层债券,CDS 合约明确规定了参考债务 (Reference Obligation), 但投资者无需实际持有这些债券。即使在发生信用事件时，现金结算的 CDS 也不要求交割底层债券。

C 选项错误。

- CDS 的市场价格（即 CDS 利差）会持续反映参考实体的信用质量变化。例如，当企业信用评级下调或市场对其信用状况担忧时，CDS 利差会立即扩大。CDS 甚至经常比债券市场更快反映信用风险的变化。

D 选项错误。

- CDS 市场通常提供实时的价格发现功能，标准化的 CDS 合约具有很好的价格透明度。

考察: CDS 特征（CDS 不会产生基差风险）

9. A risk analyst at a fixed-income investment firm is currently evaluating the impact of asset-liability mismatches during the 2007-2008 credit crisis. They are particularly interested in understanding how these mismatches affected financial stability. Which of the following statements correctly describes the phenomenon of asset-liability mismatch during that period?

- A. If the credit quality of the asset side deteriorates during a mismatch, it does not necessarily lead to increased credit risk for investors.
- B. Banks can effectively reduce funding liquidity risk by extending the duration of their assets instead of shortening them.
- C. Using short-term repurchase agreements or commercial paper to finance long-term assets is a common and effective practice.
- D. When the duration of funding liabilities is shorter than that of loan assets, banks face greater interest rate risk and lower liquidity risk.

答案:C

解析:

A 选项错误。

- 资产方信用状况恶化通常会导致信用风险的增加，因为信用质量的下降意味着借款人违约的可能性上升。这会直接影响投资者的收益预期和资产的市场价值，因此该说法不正确。

B 选项错误。

- 实际上，银行通常通过缩短资产期限来降低流动性风险。延长资产期限可能导致银行在市场利率上升时面临更大的利率风险，因为长期资产的价值会受到利率波动的影响。此外，短期负债与长期资产的匹配不当会加剧流动性风险，因此该说法不符合实际情况。

C 选项正确。

- 使用短期回购协议或商业票据融资以购买长期资产是导致资产负债错配的主要原因。这种做法使得银行在短期内获得资金，但长期资产的流动性较低，可能在市场波动时引发流动性危机。因此，C 选项准确描述了这一现象。

D 选项错误。

- 当负债的期限小于资产的期限时，银行面临的利率风险通常较大，因为利率的波动会影响长期资产的价值。同时，融资流动性风险也会增加，因为短期负债可能在到期时无法再融资，导致流动性紧张。因此，该说法不符合实际情况。

考察: 资产负债错配的定义和影响。（资产负债错配是指通过短期融资方式购买长期资产，而不是通过短期融资购买短期资产。）

10. A credit risk manager at a global investment bank is reviewing various credit risk mitigation tools after observing increased counterparty defaults in the market. They need to evaluate the effectiveness of different risk mitigation methods. Which of the following is correct about the methods of mitigation of credit risk?

- A. The safest way to transfer credit risk is to buy insurance from a third party that transfers the bank's credit risk to a counterparty.
- B. Specific agreements need to be established between counterparties to ensure that the risk transfer strategy is effective, but these agreements may not easily meet the special needs of counterparties.
- C. Netting can be a way to reduce credit risk, which can be eliminated by reducing the net exposure of counterparties.

D. Collateral can offset credit losses in the event of default, so if there is enough collateral, credit risk in the trade can be completely avoided.

答案:B

解析:

A 选项错误。

- 从第三方机构购买保险确实是转移信用风险的一种方式，但这实际上是将风险转移给第三方机构而不是交易对手。
- 第三方保险机构本身也可能面临违约风险，特别是在系统性风险事件中。
- 因此，不能将其简单地视为” 最安全的” 风险转移方法。

B 选项正确。

- 风险转移策略的有效性确实依赖于交易对手之间建立具体的协议。这些协议需要明确规定风险转移的条件、范围和执行机制。
- 由于不同交易对手可能有特殊需求（如特定的触发条件、保证金要求等），这些协议可能难以完全满足所有方的需求。这种观点准确反映了信用风险管理中的实际挑战。

C 选项错误。

- 净额结算确实可以降低信用风险，但其实施需要具体的法律文件支持。净额结算协议必须得到法律认可，并在破产情况下可执行。仅仅通过减少净敞口并不能完全消除信用风险，这种说法过于简化了净额结算的复杂性。

D 选项错误。

- 抵押品确实可以降低违约损失，但不能完全消除信用风险。抵押品面临多个潜在问题：
 - 抵押品的价值可能随市场条件变化而波动
 - 在系统性风险事件中，抵押品的价值可能与违约风险呈正相关
 - 例如，石油公司以原油作为抵押品，油价暴跌可能同时导致公司违约风险上升和抵押品价值下跌

考察: 信用风险转移的工具及其局限性。(净额结算、抵押品、第三方保险)

11. At a seminar on the financial crisis, experts discussed the impact of mortgage securitization and its potential risks. Which of the following statements correctly describes the characteristics of mortgage securitization?

- A. The process of mortgage securitization involves repackaging existing assets and their cash flows into different securities, providing investors with diversified investment options.
- B. The credit rating assessment in securitization primarily focuses on the historical performance of similar assets, ensuring accurate risk evaluation for all tranches.
- C. The layered structure in securitization maintains consistent risk levels across all tranches, promoting equal risk sharing among investors.
- D. The standardized nature of mortgage pools leads to uniform pricing mechanisms, making valuation straightforward for all securitized products.

答案:A

解析:

A 选项正确。

- 抵押贷款证券化确实涉及将现有资产及其现金流重新打包成不同的证券，这种结构设计为投资者提供了多样化的投资选择，有助于实现风险分散。

B 选项错误。

- 证券化产品的信用评级不仅需要考虑历史表现，还需要考虑当前市场条件、违约相关性等多个因素。仅依赖历史数据无法确保准确评估所有分层的风险，特别是在市场条件发生重大变化时。

C 选项错误。

- 证券化产品的分层结构实际上是为了创造不同风险水平的证券，从最高级的 AAA 到权益级都具有不同的风险特征。风险并非在各个分层之间平均分配，而是呈现出明显的层级差异。

D 选项错误。

- 抵押贷款池的特征往往是异质的，不同的贷款具有不同的期限、利率和信用质量。这种差异性使得证券化产品的定价变得复杂，需要考虑多个因素，无法简单地通过统一的定价机制进行估值。

考察: 抵押贷款证券化的特征及其复杂性。(证券化产品的分层结构具有不同的风险水平)

12. During a seminar on liquidity risks in financial markets, experts discuss various risks and mechanisms associated with commercial paper. Which of the following statements is incorrect?

- A. In unsecured commercial paper financing, the issued short-term debt does not have any specific asset backing, meaning it relies entirely on the creditworthiness of the issuer.
- B. Repurchase agreements are actually included in bankruptcy proceedings, which means that in the event of a bank's bankruptcy, the assets in the repurchase agreements may be used to pay off other creditors.
- C. In a repurchase agreement, the setting of a haircut is intended to protect the lender in case of default when selling the collateral, potentially leading to a loss of the loan amount.
- D. Asset-backed commercial paper is a special case of issuing commercial paper, where the issuer finances the purchase of assets through bank commercial paper, and these assets serve as collateral for the commercial paper.

答案:B

解析:

A 选项正确。

- 无担保商业票据确实完全依赖于发行人的信用状况，没有特定资产的支持。这使得投资者面临较高的信用风险，因为如果发行人违约，投资者将无法收回投资。

B 选项错误。

- 实际上，回购协议在破产程序中是被排除的。这意味着在银行破产时，回购协议中的资产不会被用于偿还其他债权人，而是优先保护回购协议的参与者，确保他们能够收回抵押品。

C 选项正确。

- 在回购协议中，haircut（折扣）的设置确实是为了保护贷款方，确保在违约后出售抵押品时能够减少潜在的损失。通过设定折扣，贷款方可以降低因市场波动导致的损失风险。

D 选项正确。

- 资产支持商业票据确实是发行商业票据的一种特殊案例，发行人通过银行商业票据融资购买资产，并且这些资产作为抵押品为商业票据提供担保。这种结构有助于降低投资者的风险。

考察: 商业票据及其相关风险和机制。(回购协议在破产程序中是被排除的。)

13. During a discussion on structured finance, experts examine the characteristics of different tranches in a collateralized debt obligation (CDO). Which of the following statements correctly describes the characteristics of an Equity Tranche?

- A. Investors in the equity tranche receive residual cash flows only after other tranches have been paid, and bear the first losses in case of defaults.
- B. The equity tranche provides stable returns through a fixed interest rate mechanism, with moderate exposure to market fluctuations.

- C. The equity tranche maintains consistent credit quality through diversification of underlying assets, leading to predictable cash flows.
- D. The equity tranche offers enhanced structural protection through its senior position in the waterfall payment structure.

答案:A

解析:

A 选项正确。

- 权益分层的投资者确实在其他层级获得支付后才能获得剩余现金流，并且在发生违约时首先承担损失。这准确反映了权益分层的基本特征。

B 选项错误。

- 权益分层实际上不提供固定利率收益，其收益完全依赖于剩余现金流，波动性最大。这种特征使其成为 CDO 结构中风险最高的部分。

C 选项错误。

- 权益分层的信用质量和现金流都具有高度不确定性，底层资产的多样化并不能为权益分层提供稳定的现金流预期，因为它要承担首层损失。

D 选项错误。

- 权益分层在偿付顺序中处于最次级位置，而不是高级位置。它不具有任何结构性保护，相反要为其其他层级提供信用增级。

考察: CDO 的特征和不同层级的特性。(权益分层在偿付顺序中处于最次级位置)

14. In a typical asset securitization transaction, a mortgage pool is divided into three tranches: Senior Tranche, Mezzanine Tranche, and Equity Tranche. The Senior Tranche investors invest \$1,000,000, the Mezzanine Tranche investors invest \$500,000, and the Equity Tranche investors invest \$500,000. If the total income from the mortgage pool is \$1,800,000 and there is a default loss of \$200,000, calculate the net income for investors in each tranche.

- A. Senior Tranche: \$1,000,000; Mezzanine Tranche: \$250,000; Equity Tranche: \$0
- B. Senior Tranche: \$1,000,000; Mezzanine Tranche: \$200,000; Equity Tranche: \$100,000
- C. Senior Tranche: \$1,000,000; Mezzanine Tranche: \$0; Equity Tranche: \$100,000
- D. Senior Tranche: \$900,000; Mezzanine Tranche: \$100,000; Equity Tranche: \$0

答案:A

解析:

优先级分层 (Senior Tranche):

- 首先获得本金和利息。由于总收益为 \$1,800,000，优先级分层的投资者首先获得其本金 \$1,000,000，剩余 \$800,000 用于分配利息。
- 假设优先级分层的投资者获得的利息为 5%，则利息为 $\$1,000,000 \times 5\% = \$50,000$ 。
- 因此，优先级分层的投资者净收益为 $\$1,000,000 + \$50,000 = \$1,050,000$ 。

夹层分层 (Mezzanine Tranche):

- 在优先级分层之后获得支付。优先级分层的投资者已经获得了 \$1,050,000，剩余 \$750,000。
- 夹层分层的投资者承担损失后，损失上限为其投资额，即 \$500,000。
- 因此，夹层分层的投资者获得 \$250,000。

权益分层 (Equity Tranche):

- 在所有层级之后获得支付。由于夹层分层已经获得了 \$250,000，剩余 \$500,000 用于权益分层。
- 但由于项目出现违约损失 \$200,000，权益分层的投资者首先承担损失，最终没有收益。

考察: 资产证券化的收益分配。(优先级分层、夹层分层、权益分层)
