

目录

1 Financial Institutions 考点:Banks	3
题号 1 考察: Economic capital 的定义和特点。(区分四种资本: equity capital、financial capital、economic capital 和 regulatory capital)	3
题号 2 考察: 道德风险问题的解决措施。(基于风险的保费)	4
题号 3 考察: 道德风险问题的解决措施。(银行本身的道德风险)	4
题号 4 考察: 商业银行和投资银行的业务范围和监管框架。(关注一下投资银行和商业银行的业务隔离问题)	5
题号 5 考察: 银行市场风险。(银行市场风险主要来自于交易操作)	5
题号 6 考察: 银行衍生品交易中的信用风险。(银行衍生品交易中的信用风险主要来自于交易对手的违约风险)	6
题号 7 考察: 银行操作风险的特征。(银行操作风险主要来自于内部流程、人员、系统和外部事件)	7
题号 8 考察: 银行资本类型和作用。(债务资本和经济资本的特点)	7
题号 9 考察: 巴塞尔协议的演变和影响。(熟悉每个版本的巴塞尔协议)	8
题号 10 考察: 标准化模型和内部模型在巴塞尔协议中的应用。(了解两种模型的基本特征和应用范围)	9
题号 11 考察: 银行账簿和交易账簿的区别。(了解两者的基本特征和风险管理要求)	9
题号 12 考察: 银行与证券化。(OTD 模式确实将风险从原始贷款机构转移到了最终投资者身上)	10
题号 13 考察: 投行 offerings(了解 Best efforts 和 Firm commitment 的特点)	10
题号 14 考察: 证券承销方式及其收入来源。(包销承诺提供直接交易利润机会)	11
题号 15 考察: 理解荷兰拍卖的清算价格和分配机制。(价格从高到低)	12
题号 16 考察: 银行内部控制措施。(监管要求部门间的适当分离以防止利益冲突)	13
题号 17 考察: originate-to-distribute banking model 的后果。(信贷标准变得宽松)	13
题号 18 考察: investment bank 和 commercial bank 的利益冲突。(有四类冲突)	14
2 Financial Institutions 考点:Insurance banking	14
题号 1 考察: 保险公司的保费计算。(解方程的思维)	15
题号 2 考察: life insurance 的 expected claim 计算。(理解公式就好做了)	16
题号 3 考察: 保险合同的主要特征 (养老金计划和人寿保险确实有很多共同点)	16
题号 4 考察: 保险公司主要风险类型 (资金充足性风险、市场风险、信用风险、运营风险)	17
题号 5 考察: 年金合同特征 (定期支付、税收递延、流动性限制、价值保证)	17
题号 6 考察: 人寿保险类型。(终身寿险、定期寿险、终结寿险、团体寿险的特点与区别)	18
题号 7 考察: 保险公司风险类型 (长寿风险、死亡风险、不同类型保险的风险特征)	19
题号 8 考察: 保险公司比率分析 (运营比率计算、综合比率计算、股息影响评估)	19
题号 9 考察: 保险中的逆向选择。(体检是缓解逆向选择的有效手段)	20
题号 10 考察: CAT 债券特征。(低相关性)	21
题号 11 考察: 道德风险分析。(人寿保险中的道德风险相对较小)	21
题号 12 考察: 控制道德风险。(别与逆向选择混了)	22
题号 13 考察: 银行体系道德风险控制 (基于风险的保费)	22
题号 14 考察: 道德风险识别和逆向选择分析 (失业保险风险: 道德风险和逆向选择)	23
题号 15 考察: Solvency II 框架 (SCR 和 MCR 的资本要求比例关系)	24
题号 16 考察: 养老金计划中的风险分配和账户结构。(对比 DB 和 DC 的特点)	24
题号 17 考察: 银行和保险公司资本要求和风险管理实践的比较。(信息披露要求的差异)	25
题号 18 考察: 养老金计划中的风险分配和账户结构。(这题简单熟悉一下即可)	25
题号 19 考察: Solvency II 框架 (资本要求和资本计划制定)	26
3 Financial Institutions 考点:Mutual funds and Hedge Funds	26
题号 1 考察: mutual fund 的 NAV 计算。	27
题号 2 考察: 计算对冲基金的总回报以满足净回报目标。(扣除管理费后计算)	27
题号 3 考察: 共同基金的特点。(监管要求和信息披露)	28
题号 4 考察: 三类基金的特点。(封闭式基金可以使用止损订单)	29
题号 5 考察: 开放式和封闭式基金的特点。(对比这两者的交易机制和定价特点)	29
题号 6 考察: 不良交易行为。(不是每个都非法)	30
题号 7 考察: 对冲基金和共同基金的特点。(对冲基金通常面向合格投资者, 以规避某些监管要求。)	31

题号 8 考察: 对冲基金的锁定期（不用马上平仓）	31
题号 9 考察: 对冲基金的费用结构。（比例调整条款是高水位线条款的一部分）	32
题号 10 考察: 共同基金和对冲基金的区别（共同基金通常不能使用杠杆）	33
题号 11 考察: 对冲基金的绩效报告。（measurement bias 和 backfill bias）	33
题号 12 考察: 对冲基金的策略。（合并套利对冲基金依赖公开信息进行交易）	34
4 Financial Institutions 考点:Central Counterparties	34
题号 1 考察: 交易所交易系统的特点及优势。（交易所交易特点：标准化合约、中央清算、匿名撮合、电子化执行）	34
题号 2 考察: 双边清算市场的特点。（双边 OTC 衍生品面临流动性风险）	35
题号 3 考察: 交易所的基本功能和特征。（交易所强调标准化、集中撮合、严格准入、信息透明）	36
题号 4 考察: 中央清算机制中的风险管理概念。（道德风险和逆向选择）	36
题号 5 考察: 清算所成员的资金贡献类型。（清算所资金要求：维持保证金、初始保证金、会员费、担保基金）	37
题号 6 考察: 期货市场实物交割中清算所的作用。（期货交割流程：清算所角色、交割协调、交易对手管理）	37
题号 7 考察: CCPs 的特点。（CCPs 可能增加顺周期性）	38
题号 8 考察: 模型风险的来源。（区别正向风险和错向风险）	38
题号 9 考察: 清算所违约处理的首选方法。（优先清算未满足保证金要求的头寸）	39
题号 10 考察: 自动净差的计算过程。（需要理解 netting 的原理）	40

1 Financial Institutions 考点:Banks

1. A risk manager at a major bank is tasked with determining the capital levels necessary to protect against unexpected financial losses. This involves using the bank’s proprietary risk models and internal assessments, often resulting in a capital figure lower than regulatory requirements. What is this type of capital called?

- A. Equity capital.
- B. Financial capital.
- C. Economic capital.
- D. Regulatory capital.

答案:C

解析:

A 选项错误。

- 股本资本是股东投资于银行的资金，用于支持银行的长期增长和稳定，但不专注于风险管理。

B 选项错误。

- 财务资本通常指银行用于日常运营和投资的资金，而不是专门用于覆盖意外损失的资本。

C 选项正确。

- 经济资本是银行内部评估的最低资本水平，用于覆盖意外损失。它基于银行自身的风险模型和评估，通常低于监管资本。

D 选项错误。

- 监管资本是外部监管机构要求银行维持的最低资本水平，以确保合规性和资本充足性。

考察: Economic capital 的定义和特点。(区分四种资本：equity capital、financial capital、economic capital 和 regulatory capital)

2. A central bank is concerned about moral hazard in the banking system, where banks might take excessive risks due to the safety net provided by deposit insurance. To mitigate this issue, the central bank is considering several policy actions. Which of the following actions is most likely intended to address the problem of moral hazard?

- A. Implementing risk-based premiums for deposit insurance.
- B. Encouraging banks to increase loans to higher-risk borrowers.
- C. Expanding government-backed deposit insurance programs.
- D. Allowing banks to offer higher interest rates to attract more deposits.

答案:A

解析:

A 选项正确。

- 实施基于风险的存款保险费率是解决道德风险问题的有效措施。通过要求风险较高的银行支付更高的保险费，这种方法将保险成本与风险水平对齐，从而抑制过度冒险行为。

B 选项错误。

- 鼓励银行向高风险借款人增加贷款可能加剧道德风险，因为这会增加银行的风险暴露。

C 选项错误。

- 扩大政府支持的存款保险计划可能会增加道德风险，因为这可能会进一步降低银行对风险管理的重视。

D 选项错误。

- 允许银行提供更高的利率以吸引更多存款可能会导致银行承担更高的风险以支付这些利率，从而加剧道德风险。

考察: 道德风险问题的解决措施。(基于风险的保费)

3. A national bank has introduced a new policy to fully insure all depositor funds, regardless of the bank’s risk profile, to boost public confidence. However, this policy might lead to unintended consequences. Which of the following scenarios best illustrates the potential moral hazard problem arising from this policy?

- A. A bank tightens its lending criteria to reduce exposure to high-risk loans.
- B. A bank pays higher insurance premiums due to its increased risk-taking activities.
- C. A bank increases its capital reserves to cover potential losses from risky investments.
- D. A bank aggressively expands into high-risk markets, knowing depositors are fully protected.

答案:D

解析:

A 选项错误。

- 收紧贷款标准以减少高风险贷款的风险暴露，这种做法实际上有助于降低道德风险。

B 选项错误。

- 因风险增加而支付更高的保险费，实际上是为了抑制道德风险，因为这会促使银行更好地管理风险以避免更高的成本。

C 选项错误。

- 增加资本储备以覆盖高风险投资的潜在损失，这种做法有助于降低道德风险，因为它提高了银行的风险承受能力。

D 选项正确。

- 当银行知道存款人资金完全受到保护时，可能会倾向于在高风险市场中进行激进扩张。这种行为是道德风险的典型表现，因为银行在承担更高风险时，感受到的压力较小。
- 存款保险提供的安全网可能导致银行在风险管理上不够谨慎，因为即使出现损失，存款人也不会受到影响。

考察: 道德风险问题的解决措施。(银行本身的道德风险)

4. A financial regulator is reviewing the historical development and regulatory framework of commercial and investment banking sectors. Which of the following statements is CORRECT regarding the business scope and supervision of commercial banks and investment banks?

- A. Commercial banks’ retail business primarily focuses on large corporate clients, with transaction amounts comparable to wholesale banking operations.
- B. Wholesale banks maintain high administrative costs due to their specialized transaction processing requirements and complex risk management systems.
- C. The role of investment banks in ipos is more about providing professional services and using their network resources, rather than focusing on pricing through market mechanisms like the Dutch auction.
- D. Prior to the 2007-2008 financial crisis, U.S. investment banks and commercial banks were free to engage in each other’s business activities.

答案:C

解析:

A 选项错误。

- 商业银行的零售业务实际上主要面向个人和小型企业客户，交易金额通常较小。这种说法混淆了零售银行业务和批发银行业务的基本特征。

B 选项错误。

- 批发银行实际上因为规模经济效应，其单位管理成本相对较低。虽然交易金额大，但标准化程度高，使得管理成本得到有效控制。

C 选项正确。

- 使用投资银行处理首次公开募股（IPO）的优势在于他们拥有必要的专业知识以及与潜在投资者的关系。投资银行在 IPO 过程中扮演着策划、定价、承销、市场营销、法律合规等多个重要角色，为公司顺利进行首次公开募股提供重要支持。
- 一些发行人认为他们更希望市场为其公司决定合适的价格。他们可以通过荷兰拍卖来实现这一点。这是一种程序，所有投资者（不仅仅是投资银行的客户）都被邀请提交出价，表明他们希望购买多少股份以及以什么价格。

D 选项错误。

- 在 1999 年《格拉斯-斯蒂格尔法案》被废除之前，美国的投资银行和商业银行是严格分离的。投资银行不允许接受存款和发放贷款，而商业银行不允许安排其他公司的股权融资。这种分离是为了防止利益冲突和降低金融风险。

考察: 商业银行和投资银行的业务范围和监管框架。（关注一下投资银行和商业银行的业务隔离问题）

5. A risk management team at a major international bank is reviewing their market risk management practices. Which of the following statements about bank market risk management is CORRECT?

- A. Market variables primarily respond to domestic economic indicators, with limited influence from international political events.
- B. Due to the prohibition of proprietary trading in the US, banks' market risk does not primarily stem from their trading operations.
- C. Banks' bid-ask spread mechanisms serve as a comprehensive risk management tool, effectively eliminating market risks in trading operations.
- D. Banks provide clients with various financial products related to market variable prices, including spot, forward, and option transactions.

答案:D

解析:

A 选项错误。

- 市场变量实际上受到多种国际事件的显著影响，不仅限于国内经济指标。例如，英国脱欧公投影响了英镑汇率，对伊朗的制裁影响了全球油价，这些国际事件都会对市场变量产生重要影响。

B 选项错误。

- 尽管美国的银行自营交易受到限制，但银行的市场风险仍然主要来自于其交易操作，包括为客户提供的金融产品，如即期、远期和期权交易。这些交易的价值依赖于市场变量的价格，因此银行仍然面临市场风险。

C 选项错误。

- 虽然银行通过买卖价差机制可以管理部分市场风险，但这只是风险管理工具之一，并不能完全消除市场风险。银行仍需要采用其他风险管理措施来综合管理市场风险。

D 选项正确。

- 银行确实为客户提供与市场变量价格相关的多种金融产品，包括即期、远期和期权交易。这些产品的多样性使客户能够根据自身需求选择合适的交易工具，同时也反映了银行在市场风险管理方面的专业能力。

考察: 银行市场风险。（银行市场风险主要来自于交易操作）

6. A derivatives trader at a major bank is preparing a risk assessment report focusing on credit risk in derivatives trading. Which of the following statements about credit risk in bank derivatives trading is CORRECT?

- A. Derivatives trading market risk primarily stems from operational factors, with underlying market variables playing a secondary role in value determination.

- B. Derivatives trading credit risk management focuses on collateral collection, with counterparty creditworthiness assessment being a supplementary consideration.
- C. The credit risk in derivatives arises from the possibility that counterparties may default when the trade has a positive value to the bank (and thus a negative value to the counterparty).
- D. Credit risk exposure in derivatives remains constant throughout the life of the contract due to the initial pricing mechanisms.

答案:C

解析:

A 选项错误。

- 衍生品交易的市场风险主要来源于基础资产的市场价格变动，而不是运营因素。基础资产的价格变化是决定衍生品价值的主要因素，这种关系是直接的而非次要的。

B 选项错误。

- 在衍生品交易的信用风险管理中，交易对手的信用评估是核心要素，而不是补充考虑因素。虽然抵押品收集很重要，但它是风险管理的辅助手段，而不是主要焦点。

C 选项正确。

- 这准确描述了衍生品信用风险的本质：当交易对银行有正值时（即对手方有负值），对手方违约会导致银行损失。这种风险特别重要，因为它直接关系到银行可能遭受的实际损失。

D 选项错误。

- 衍生品的信用风险暴露实际上会随着时间和市场条件的变化而变化。初始定价机制并不能固定信用风险暴露，风险水平会随着合约价值的变化而波动。

考察: 银行衍生品交易中的信用风险。（银行衍生品交易中的信用风险主要来自于交易对手的违约风险）

7. An internal auditor at a commercial bank is training new staff about operational risk management. During the training session, several common misconceptions about operational risk emerge from the discussion. Which of the following statements represents a misconception about the nature and management of operational risk in banking?

- A. Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events.
- B. Operational risk includes all risks that are not market or credit risks, but excludes strategic and reputational risks.
- C. The quantification of operational risk in banks is simpler than that of market or credit risk.
- D. Important sources of bank operational risk include cyber risk, legal risk, and compliance risk.

答案:C

解析:

A 选项正确，不选。

- 这是操作风险的标准定义，准确描述了操作风险的四个主要来源：内部流程、人员、系统和外部事件。这个定义被广泛接受并使用，反映了操作风险的全面性质。

B 选项正确，不选。

- 操作风险确实包含了除市场风险和信用风险之外的多数风险。但需要特别注意的是，战略风险和声誉风险虽然重要，但不属于操作风险范畴。

C 选项错误，不选。

- 操作风险的量化实际上比市场风险或信用风险更加复杂和困难。这是因为操作风险涉及的因素更多，很多是定性的，难以用数据准确衡量。操作风险事件往往是低频高损失的事件，这增加了量化的难度。

D 选项正确。

- 网络风险、法律风险和合规风险确实是银行操作风险的重要组成部分。这些风险在当今银行业务中越来越重要，需要特别关注和管理。

考察: 银行操作风险的特征。(银行操作风险主要来自于内部流程、人员、系统和外部事件)

8. A bank examiner is evaluating different types of capital requirements and their roles in maintaining bank stability. Which of the following statements about bank capital types and their functions is CORRECT?

- A. Equity capital primarily serves as a buffer against systematic market risks, while debt capital actively absorbs operational losses during normal business conditions.
- B. Economic capital focuses on meeting external regulatory requirements, while regulatory capital reflects the bank’s internal assessment of risk exposures.
- C. Debt capital provides additional protection for depositors as it faces risk only after equity is depleted, while economic capital is the bank’s own estimate of required capital.
- D. Regulatory capital represents a dynamic measure that automatically adjusts to market conditions, ensuring optimal capital allocation across all risk types.

答案:C

解析:

A 选项错误。

- 这个描述颠倒了股本和债务资本的作用。实际上，股本是在日常经营中吸收损失的资本，而债务资本只有在银行面临破产时才会受到影响，而不是在正常经营条件下主动吸收损失。

B 选项错误。

- 这个描述混淆了经济资本和监管资本的角色。经济资本实际上是银行内部风险评估的结果，用于吸收未预期损失，而监管资本是外部监管机构要求的最低资本要求。

C 选项正确。

- 债务资本确实为存款人提供了额外的保护层，因为只有在股本完全耗尽后才会动用债务资本。
- 经济资本是银行基于自身风险评估而确定的所需资本量，这个描述准确反映了其本质。

D 选项错误。

- 监管资本实际上是一个相对静态的最低要求标准，而不是自动调整的动态指标。它由监管机构设定，需要通过正式的监管程序才能调整，并不会自动适应市场条件的变化。

考察: 银行资本类型和作用。(债务资本和经济资本的特点)

9. A bank compliance officer is conducting a training session for new employees about the Basel Accords. During the discussion, several common misconceptions about the evolution of capital requirements emerge. Which of the following statements represents a misconception about the development and implementation of the Basel Accords?

- A. Basel I required banks to calculate capital requirements in a uniform way, primarily to cover losses from loan and derivative contract defaults.
- B. Basel II allows banks to use internal modeling to determine credit risk capital and operational risk capital. After the subprime crisis, the Basel Committee decided to strengthen banks’ reliance on internal modelling.
- C. Basel II.5 was revised after the 2007-2008 financial crisis to strengthen market risk capital calculation rules.
- D. Basel III decided to increase banks’ equity capital requirements and is expected to be fully implemented by 2027.

答案:B

解析:

A 选项正确。

- Basel I 确实建立了统一的资本计算方法，这是其重要特征。其主要目的是为了覆盖来自贷款和衍生品合约违约可能带来的损失。这种统一的方法帮助建立了全球银行监管的基本框架。

B 选项错误。

- Basel II 则允许银行利用内部模型法来决定信用风险资本和操作风险资本。次贷危机之后，巴塞尔委员会决定减少银行对内部模型法的依赖，因为危机已说明之前银行的自由度过大。

C 选项正确。

- Basel II.5 确实是在 2007-2008 年金融危机后进行修订的。修订的主要目的是加强市场风险资本计算规则，这反映了金融危机期间暴露出的市场风险管理不足问题。

D 选项正确。

- Basel III 确实提高了银行的股本资本要求，这是对金融危机的重要响应。预计在 2027 年全面实施的时间表是准确的。这反映了监管机构对提高银行系统稳定性的长期承诺。

考察: 巴塞尔协议的演变和影响。(熟悉每个版本的巴塞尔协议)

10. A regulatory compliance specialist at a global bank is evaluating the application of standardized and internal models under the Basel II framework. Which of the following statements about the application of standardized and internal models under Basel II is CORRECT?

- A. The standardized models provide banks with flexibility in risk calculation methodologies, allowing them to adapt the models based on their specific business needs and risk profiles.
- B. Internal models serve as supplementary tools to standardized approaches, with their primary function being the validation of standardized model results.
- C. After the financial crisis, the Basel Committee reduced reliance on internal models, believing banks had too much freedom in choosing models that produced minimum capital requirements.
- D. The Basel Committee encourages banks to develop sophisticated internal models for operational risk calculation to better reflect their unique operational environments.

答案:C

解析:

A 选项错误。

- 标准化模型是由巴塞尔委员会统一制定的，具有固定的计算方法和参数，银行不能根据自身需求进行调整。这种统一性是为了确保各银行资本计算的可比性和一致性。

B 选项错误。

- 内部模型是独立的风险计量方法，而不是标准化方法的补充工具。获得监管批准的内部模型可以替代标准化方法用于资本计算，而不是仅作为验证工具。

C 选项正确。

- 金融危机确实暴露出了过度依赖内部模型的问题。巴塞尔委员会认识到银行在选择产生最低资本要求的模型时有过多自由度，因此采取措施减少对内部模型的依赖。这反映了监管机构对风险管理标准化的重视。

D 选项错误。

- 巴塞尔委员会实际上要求操作风险资本必须使用标准化模型计算，而不是鼓励使用内部模型。这是为了确保操作风险资本计算的一致性和可比性。

考察: 标准化模型和内部模型在巴塞尔协议中的应用。(了解两种模型的基本特征和应用范围)

- 11.** A bank examiner is reviewing the distinction between banking book and trading book classifications at a major financial institution. Which of the following statements about the differences between banking book and trading book is CORRECT?
- A. The banking book primarily focuses on short-term market opportunities, while the trading book emphasizes stable interest income generation through long-term holdings.
 - B. The banking book’s capital requirements are primarily determined by market risk factors, reflecting the dynamic nature of its portfolio management approach.
 - C. Banks tend to exploit the unclear boundaries between books by placing trades in whichever book results in lower capital requirements.
 - D. The Fundamental Review of the Trading Book (FRTB) enhances risk management through flexible capital calculation approaches tailored to each bank’s trading strategies.

答案:C

解析:

A 选项错误。

- 这个描述完全颠倒了银行账簿和交易账簿的基本特征。实际上，银行账簿主要用于长期持有以赚取利息收入，而交易账簿则专注于短期市场机会和价格波动带来的收益。

B 选项错误。

- 这个说法混淆了风险资本要求的基本原则。银行账簿的资本要求主要基于信用风险，而不是市场风险。这反映了银行账簿中资产的长期持有性质和信用风险暴露。

C 选项正确。

- 这准确描述了银行在实践中的行为。由于两种账簿之间的界限有时并不明确，银行确实会利用这种模糊性，选择将交易放在资本要求较低的账簿中，以降低总体资本要求。这种行为反映了监管套利的现实存在。

D 选项错误。

- FRTB 实际上旨在通过更严格和统一的标准来加强风险管理，而不是提供灵活的定制方法。它的目的是减少银行在风险计算方面的自由裁量权，提高风险管理的一致性和可比性。

考察: 银行账簿和交易账簿的区别。(了解两者的基本特征和风险管理要求)

- 12.** A mortgage market analyst is examining the Originate-to-Distribute (OTD) model used by banks in subprime mortgage lending during the pre-2008 period. Which of the following statements about banks’ OTD model in subprime mortgage lending is CORRECT?
- A. Subprime borrowers maintained stable mortgage payments throughout the loan term due to the fixed-rate structure of their initial mortgages.
 - B. Through securitization of subprime mortgages, banks created pools of assets that were primarily rated below investment grade and sold these assets to investors.
 - C. The growth in subprime mortgage lending primarily resulted from improved borrower creditworthiness and enhanced property valuation methods.
 - D. Under the OTD model, losses on subprime mortgages were borne by the ultimate investors rather than the banks that originally made the loans.

答案:D

解析:

A 选项错误。

- 次级贷款借款人的还款并不稳定。实际上，在房价上涨时期，借款人通常会在初始优惠利率期结束时进行再融资，以避免更高的浮动利率支付。这种再融资行为依赖于持续上涨的房价。

B 选项错误。

- 通过证券化过程，银行实际上创建了主要是投资级的资产池，而不是低于投资级的资产池。这是通过结构化设计实现的，将次级抵押贷款重新包装成不同风险等级的证券，其中大部分获得了投资级评级。

C 选项错误。

- 次级抵押贷款市场的增长主要是由 2000 年代初期的低利率环境推动的，而不是借款人信用质量的提升。低利率降低了借贷成本，同时也促使投资者寻求高收益产品，推动了这一市场的发展。

D 选项正确。

- OTD 模式确实将风险从原始贷款机构转移到了最终投资者身上。这种模式改变了传统的”发起并持有”模式，使得银行能够通过证券化将贷款风险转移给投资者，从而减少了自身的风险暴露。

考察: 银行与证券化。(OTD 模式确实将风险从原始贷款机构转移到了最终投资者身上)

13. An investment banking analyst is reviewing different securities issuance methods and the bank’s role in each. Which of the following statements about banks’ roles in securities issuance is CORRECT?

- A. Private placement primarily targets retail investors through extensive marketing campaigns, providing them with direct access to new securities offerings.
- B. Public offerings typically rely on standardized pricing mechanisms, with banks acting mainly as administrative intermediaries in the distribution process.
- C. In a best efforts arrangement, banks provide price support services to maintain the securities’ market value throughout the distribution period.
- D. In an underwriting arrangement, banks guarantee to sell securities above market price to ensure profits for the issuing company.

答案:D

解析:

A 选项错误。

- 私人配售实际上是面向少数大型机构投资者的证券销售方式，而不是零售投资者。这种方式通常避免广泛的营销活动，而是通过直接协商与专业机构投资者（如养老金、保险公司）进行交易。

B 选项错误。

- 公开发行过程中，银行扮演着积极的定价和销售角色，而不仅仅是行政中介。定价过程通常需要考虑市场需求、发行人状况等多个因素，是一个动态的过程而非标准化机制。

C 选项错误。

- 在最佳努力安排中，银行的角色是尽力销售证券，而不提供价格支持服务。银行不承担证券价格维护的责任，也不保证销售结果，这与选项描述的持续性价格支持不符。

D 选项正确。

- 在包销安排中，银行并不保证以高于市场价的价格销售证券。实际上，银行是以约定价格购买全部证券，然后试图以较高价格转售。银行的利润来自于购买价格和销售价格之间的差额，而不是保证发行公司的利润。这种安排对银行来说风险更大，但对发行公司来说风险更小。

考察: 投行 offerings(了解 Best efforts 和 Firm commitment 的特点)

14. An investment bank is evaluating different securities offering methods to determine which approach provides the highest potential for trading revenue. Which of the following methods is most likely to generate direct trading profits for the investment bank?

- A. Acting as an auction agent in a Dutch auction IPO, where the bank’s role is limited to facilitating the bidding process and price discovery.
- B. Conducting a private placement, where the bank’s revenue primarily comes from arrangement fees and advisory services.
- C. Managing a best efforts offering, where the bank acts as a selling agent without taking ownership of the securities.
- D. Executing a firm commitment underwriting, where the bank purchases the securities at a discount and resells them at a markup.

答案:D

解析:

A 选项错误。

- 在荷兰式拍卖 IPO 中，投资银行仅作为拍卖代理人，负责组织投标过程和价格发现。银行不参与证券交易，收入主要来自服务费，而不是交易利润。

B 选项错误。

- 私募配售中，投资银行主要作为中介机构，负责寻找合格投资者并安排交易。收入来源是安排费和咨询服务费，不涉及证券买卖差价。

C 选项错误。

- 在尽力承销中，投资银行作为销售代理人，代表发行人销售证券。银行不承担包销风险，也不持有证券，因此无法通过买卖差价获得交易利润。

D 选项正确。

- 在包销承诺中，投资银行以折价购买整个证券发行，承担全部包销风险。银行通过以较高价格向公众转售证券来赚取买卖差价，这是直接的交易利润。
- 这种方式虽然风险较大，但也提供了最直接的交易利润机会。

考察: 证券承销方式及其收入来源。（包销承诺提供直接交易利润机会）

15. In a Dutch auction to sell 20,000 shares, the following bids are received. The auctioneer must determine the clearing price at which all shares will be sold. Consider the bids and determine the price per share at which the shares are sold, ensuring that the total number of shares sold does not exceed 20,000.

Bidder	Number of Shares	Price (USD)
A	3,000	80
B	2,000	73
C	5,000	90
D	6,000	85
E	9,000	70
F	4,000	84
G	8,000	86

At what price are the shares sold, and how many shares does each bidder receive if the auctioneer prioritizes higher bids first?

- A. 90 USD, with C receiving 5,000 shares.
- B. 86 USD, with G receiving 8,000 shares and D receiving 6,000 shares.
- C. 85 USD, with D receiving 6,000 shares, F receiving 4,000 shares, and A receiving 3,000 shares.
- D. 84 USD, with F receiving 4,000 shares, A receiving 3,000 shares, and B receiving 2,000 shares.

答案:B

解析:

在荷兰式拍卖中，目标是找到在不超过可用数量的情况下出售股票总数的最高价格。这个过程包括以下步骤：

步骤 1：按出价降序排列。

- 首先，按价格从高到低排列所有出价。
- 出价顺序为：C (90 USD), G (86 USD), D (85 USD), F (84 USD), A (80 USD), B (73 USD), E (70 USD)。

步骤 2：累积计算总股数。

- 从最高出价开始累积股数，直到达到或超过 20,000 股。
- C 出价 90 USD，5,000 股（累计 5,000 股）。
- G 出价 86 USD，8,000 股（累计 13,000 股）。
- D 出价 85 USD，6,000 股（累计 19,000 股）。
- F 出价 84 USD，4,000 股（累计 23,000 股，超过 20,000 股）。

步骤 3：确定清算价格。

- 在达到或超过 20,000 股的最高价格为清算价格。
- 在此情况下，86 USD 是满足 20,000 股的最高价格。

步骤 4：分配股数。

- G 和 D 在 86 USD 的价格下获得其请求的股数，分别为 8,000 股和 6,000 股。

因此，股票以 86 USD 的价格出售，G 和 D 获得其请求的股数。

考察: 理解荷兰拍卖的清算价格和分配机制。（价格从高到低）

16. An internal auditor working for an investment bank is evaluating the bank’s internal controls to ensure that conflicts of interest and information sharing are effectively prevented when providing commercial banking, investment banking and securities services. He is reviewing the bank’s compliance documents to confirm compliance with regulatory requirements. Which of the following statements is correct?

- A. The integration of commercial banking and investment banking services naturally promotes information transparency and reduces potential conflicts through shared knowledge.
- B. Banks’ internal control systems primarily focus on maximizing synergies between different divisions by encouraging open communication channels across departments.
- C. Regulators require a degree of separation between commercial banking, securities services, and investment banking to prevent conflicts of interest.
- D. The implementation of information barriers in banks serves mainly to streamline decision-making processes and enhance operational efficiency.

答案:C

解析:

A 选项错误。

- 商业银行和投资银行业务的整合实际上增加了利益冲突的风险。不同部门之间的信息共享需要严格控制，而不是鼓励透明度，因为这可能导致内幕交易和其他不当行为。

B 选项错误。

- 银行的内部控制系统主要目的是防止不当的信息共享和利益冲突，而不是最大化部门间的协同效应。过度强调部门间的开放沟通可能违反监管要求。

C 选项正确。

- 监管机构确实要求商业银行、证券服务和投资银行之间保持适当的分离，这是防止利益冲突的关键措施。这种分离确保了各业务部门的独立性和客户利益的保护。

D 选项错误。

- 信息隔离措施（如“中国墙”）的主要目的是防止不当的信息流动和利益冲突，而不是提高运营效率。这些措施可能会降低决策效率，但这是为了确保合规性和保护客户利益的必要代价。

考察: 银行内部控制措施。（监管要求部门间的适当分离以防止利益冲突）

17. A risk analyst at a fixed-income investment firm is evaluating the bank’s lending strategy. He found that banks had adopted an “originate-distribution” model, which was widely discussed in financial markets. He needs to analyse the impact of this model on credit standards.What is a significant consequence of the originate-to-distribute banking model?

- A. Lack of liquidity limits market transactions, but the “originate-distribution” model typically increases liquidity through securitized loans.
- B. Excess liquidity can lead to asset bubbles, but this pattern of increased liquidity does not mean excess.
- C. Credit standards were relaxed in some areas, notably residential mortgages, as banks quickly sold loans, reducing the rigor of credit assessments.
- D. Tighter credit standards may restrict access to loans, but this model does not lead to tighter credit standards and may reduce audit rigor.

答案:C

解析:

A 选项错误。

- “发起-分销”模式实际上增加了市场的流动性。通过将贷款证券化并出售给投资者，银行能够释放资金以发放更多贷款，从而提高了市场的整体流动性。

B 选项错误。

- 尽管“发起-分销”模式确实增加了市场的流动性，但这并不意味着流动性过剩。市场的供需通常会达到新的平衡，避免了流动性过剩的情况。

C 选项正确。

- 该模式的一个显著后果是信贷标准的放松，特别是在住宅抵押贷款领域。由于银行迅速将贷款出售，它们不再持有贷款的长期风险，这可能导致在贷款发放时降低对借款人信用评估的严格性。

D 选项错误。

- 该模式并未导致信贷标准的收紧。相反，由于银行不再持有贷款的长期风险，它们可能会降低信贷审核的严格性，以便更快地发放更多贷款。

考察: originate-to-distribute banking model 的后果。（信贷标准变得宽松）

18. A compliance officer at a universal bank is evaluating potential conflicts of interest between investment banking and commercial banking divisions. Which of the following situations does NOT represent a conflict of interest between investment banking and commercial banking operations?

- A. Investment banks may use commercial bank brokers to recommend securities purchases to clients during new stock issues.
- B. In merger transactions, investment banks may obtain confidential information about target companies from commercial banks.
- C. Investment banks require research analysts to issue “buy” recommendations to please company management.
- D. Commercial banks recommend bond issuance to replace loans to increase profits for the investment banking division.

答案:D

解析:

A 选项正确，不选。

• 这确实是一个常见的利益冲突情况。投资银行利用商业银行的客户关系网络推销新股，可能导致客户利益受损。这种做法可能违背商业银行经纪人对客户的信托责任。

B 选项正确，不选。

• 这描述了一个严重的信息滥用问题。商业银行掌握的客户机密信息被不当用于投资银行业务。这种行为可能违反客户隐私保护和内幕交易相关规定。

C 选项正确，不选。

• 这反映了研究部门独立性受到损害的问题。投资银行为维护与客户公司的关系而影响研究报告的客观性。这种做法损害了投资者对研究报告的信任。

D 选项错误。

• 商业银行建议客户用债券发行替换贷款实际上是为了减少潜在的利益冲突。这种建议应该基于客户的最佳利益，而不是为了增加投资银行部门的利润。将这种行为描述为增加投资银行利润的手段是对其本质的误解。

考察: investment bank 和 commercial bank 的利益冲突。(有四类冲突)

2 Financial Institutions 考点:Insurance banking

1. The relevant interest rate for insurance contracts is 2% per annum (with semiannual compounding), and all premiums are paid annually at the beginning of the year. A \$2,000,000 term insurance contract is being proposed for a 40-year-old male in average health. Assume that payouts occur halfway through the year. Using the mortality rates estimated by the U.S. Social Security Administration, which of the following amounts is closest to the insurance company’s breakeven premium for a two-year term?

Age	Probability of Death within 1 Year	Survival Probability	Life Expectancy
40	0.002092	0.95908	38.53
41	0.002240	0.95708	37.61

A. \$4,246

B. \$4,287

C. \$4,332

D. \$8,482

答案:B

解析:

步骤 1：计算第一年的预期赔付。

- 赔付金额 = $\$2,000,000 \times 0.002092 = \$4,184$ 。
- 假设赔付发生在年中，现值 = $\frac{\$4,184}{1.01} = \$4,142.57$ 。

步骤 2：计算第二年的预期赔付。

- 第二年死亡概率 = $(1 - 0.002092) \times 0.00224 = 0.0022353$ 。
- 赔付金额 = $0.0022353 \times 2,000,000 = 4,470.63$ 。
- 现值 = $\frac{4,470.63}{(1.01)^2} = 4,339.15$ 。

步骤 3：计算总现值。

- 总现值 = $4,142.57 + 4,339.15 = 8,481.72$ 。

步骤 4：计算保费现值。

- 第一年的保费现值 = Y 。
- 第二年的保费现值 = $Y \times \frac{0.997908}{(1.01)^2}$ 。

步骤 5：求解盈亏平衡保费。

- 设 Y 为盈亏平衡保费，满足 $8,481.72 = Y + \left(Y \times \frac{0.997908}{(1.01)^2}\right)$ 。
- 解得 $Y = 4,287.50$ 。

因此，最接近的盈亏平衡保费为 \$4,287。

考察：保险公司的保费计算。（解方程的思维）

2. An actuary at a life insurance company is validating a newly implemented model used to calculate expected future claims for term life insurance policies. The actuary examines the model’s calculations using an example of a 71-year-old policyholder. The policy stipulates a payment of \$350,000 if the insured dies before age 73, and no payment otherwise. The actuary uses the following mortality data:

Age	One-year Death Probability	Cumulative Survival Probability
71	0.01700	0.81301
72	0.01886	0.79911
73	0.02070	0.78040

Assuming all claims are paid at the end of the year, which of the following values is closest to the expected claim amount for this policy?

- A. USD 5,000
- B. USD 5,500
- C. USD 6,000
- D. USD 6,500

答案:B

解析:

理论公式:

- 第一年预期赔付 = 保险金额 × 一年内死亡概率
- 第二年预期赔付 = 保险金额 × (第二年累计生存概率/第一年累计生存概率) × 第二年死亡概率
- 总预期赔付 = 两年预期赔付的加权平均

步骤 1：计算第一年的预期赔付。

- 71 岁时的一年内死亡概率：0.01700
- 第一年预期赔付 = $\$350,000 \times 0.01700 = \$5,950$

步骤 2：计算第二年的预期赔付。

- 72 岁时的一年内死亡概率：0.01886
- 需要考虑条件概率：(0.79911/0.81301)
- 第二年预期赔付 = $\$350,000 \times (0.79911/0.81301) \times 0.01886 = \$5,500$

步骤 3：确定总预期赔付。

- 总预期赔付约为 \$5,500
- 这个数值最接近选项 B

考察: life insurance 的 expected claim 计算。(理解公式就好做了)

3. An insurance advisor is explaining different types of insurance contracts to a new client who is unfamiliar with insurance products. Which of the following statements MOST LIKELY misrepresents the characteristics of insurance contract?

- A. Life insurance contracts require policyholders to pay periodic premiums during their lifetime to ensure a lump-sum payment to beneficiaries upon death.
- B. Property and casualty insurance typically has a one-year term and provides compensation for losses due to accidents, fire, theft, and similar events.
- C. Life insurance contracts require only a one-time premium payment with no need for annual renewal.
- D. Pension plans share similarities with contracts offered by life insurance companies.

答案:C

解析:

A 选项正确，不选。

- 人寿保险要求投保人在生存期间按照约定（通常是每月、每季度或每年）支付保费。这种定期缴费机制一方面降低了投保人的一次性支付压力，另一方面也确保了保险公司有稳定的现金流来支付各种赔付。当被保险人不幸身故时，受益人将获得事先约定的一次性赔付金额。

B 选项正确，不选。

- 财产保险通常采用一年期限，这样的设计允许保险公司根据上一年的理赔情况和风险变化及时调整下一年的保费和保障条款。保险范围通常包括火灾、盗窃、自然灾害等可能导致财产损失的突发事件，保险公司会根据实际损失金额进行赔付。

C 选项错误。

- 虽然市场上确实存在一些特殊的一次性缴费的人寿保险产品，但这并不是人寿保险的标准特征。大多数人寿保险合同都要求定期缴纳保费，这种设计既符合大多数人的收入特点，也有助于保险公司进行长期的资金管理和风险控制。

D 选项正确，不选。

- 养老金计划和人寿保险确实有很多共同点。两者都是长期性的金融安排，都需要精算技术来确保资金充足性，都涉及到死亡风险的管理。在实际操作中，许多养老金计划也会购买人寿保险产品来管理长寿风险，两者形成了互补关系。

考察: 保险合同的主要特征（养老金计划和人寿保险确实有很多共同点）

4. A risk management consultant is analyzing the major risks faced by insurance companies. During a presentation to the board of directors, which of the following statements about insurance company risks is correct?

- A. Insurance companies maintain stable fund levels through premium income, with actuarial calculations ensuring precise matching of assets and liabilities.
- B. Insurance companies' investment portfolios primarily focus on fixed-income securities to ensure stable cash flows and match their long-term liability structures.
- C. Insurance companies manage counterparty risk through diversified reinsurance arrangements, making default risk minimal in the industry.
- D. Insurance companies face unique operational risks that differ fundamentally from banks, as their business model focuses on long-term risk assessment and claims processing.

答案:B

解析:

A 选项错误。

- 保险公司实际上经常面临资金不足风险。保费收入和资产负债匹配并非总是稳定和精确的，这种风险主要来源于两个方面：一是保费收入可能不足以覆盖潜在的赔付支出；二是资产配置不当可能导致流动性不足。即使有精算计算，也无法完全消除这种风险。

B 选项正确。

- 保险公司的投资组合确实主要以固定收益证券为主，这是因为需要稳定的现金流来满足潜在的赔付需求。固定收益证券能够提供可预测的收入流，这与保险公司的负债结构相匹配，有助于管理流动性风险和利率风险。这种投资策略反映了保险公司对资产负债匹配管理的重视。

C 选项错误。

- 尽管再保险安排可以分散风险，但交易对手信用风险仍然显著存在。特别是在系统性风险事件中，再保险公司的违约风险可能会集中显现，导致原保险公司面临重大损失。

D 选项错误。

- 保险公司的运营风险实际上与银行非常相似，都源于内部系统、流程失效或外部事件。虽然具体业务模式不同，但基本的运营风险类型（如系统故障、人为错误、欺诈等）是相同的。说保险公司面临独特的运营风险是对风险本质的误解。

考察： 保险公司主要风险类型（资金充足性风险、市场风险、信用风险、运营风险）

5. A pension fund manager is reviewing various retirement products for their clients' portfolios. During an assessment of annuity contracts, which of the following statements about annuity contract characteristics and operations is correct?

- A. Annuity contracts primarily serve as short-term investment vehicles, focusing on market-based returns through active portfolio management.
- B. Taxes on annuity contracts are usually paid when annuity payments are received, which helps with tax deferral.
- C. The accumulated value of an annuity contract can be withdrawn at any time without penalties.
- D. Annuity contracts generate returns mainly through high-frequency trading strategies in the secondary market.

答案:B

解析：

A 选项错误。

- 年金合同实际上是长期投资工具，其主要目的是提供稳定的定期收入流，而不是追求短期市场收益。通过将一次性支付转换为长期稳定的收入流，年金特别适合退休规划需求。

B 选项正确。

- 年金合同具有重要的税收递延优势。投保人在获得年金给付时才需要缴纳相应的税款，而不是在投资阶段就缴纳税款。这种设计有助于投保人实现更好的税收筹划。

C 选项错误。

- 年金合同通常对提前支取设有严格限制。如果投保人希望在合同规定期限之前提取累积价值，通常需要支付一定的罚金或退保费用。这种说法忽视了年金合同的流动性限制特征。

D 选项错误。

- 年金合同的收益主要来自于长期稳定的投资策略和精算计算，而不是通过高频交易获取。年金产品通常投资于固定收益类资产，以确保稳定的现金流和合同保证。

考察： 年金合同特征（定期支付、税收递延、流动性限制、价值保证）

6. A life insurance agent is explaining different types of life insurance policies to a family seeking comprehensive coverage. While reviewing various policy options, which of the following statements MOST LIKELY misrepresents the characteristics of different types of life insurance?

- A. Whole life insurance provides lifelong coverage with periodic premium payments and pays the face value to beneficiaries upon death.
- B. Term life insurance provides coverage for a specific period and pays the face value if the insured dies during this period.
- C. Endowment insurance pays out at the end of the contract term regardless of whether the insured is alive.
- D. Group life insurance is typically purchased by companies for their employees, with premiums potentially shared between the company and employees.

答案:C

解析:

A 选项正确，不选。

- 终身寿险是一种基础的人寿保险产品，其特点是只要投保人按时缴纳保费，保障就会持续终身。当被保险人身故时，保险公司将向指定的受益人支付约定的保险金额。这种保险为家庭提供长期的财务保障。

B 选项正确，不选。

- 定期寿险提供特定期限内的保障，比如 10 年、20 年或 30 年。如果被保险人在保险期间内身故，保险公司将支付约定的保险金额。这种保险通常用于特定时期的风险保障，如抵押贷款期间或子女成年之前。

C 选项错误。

- 终结寿险的支付条件描述不准确。实际上，终结寿险有两种支付情况：如果被保险人在保险期间内身故，受益人将获得保险金；如果被保险人活到合同期满，则被保险人本人可获得保险金。而不是无论被保险人是否在世都在合同到期时支付。

D 选项正确，不选。

- 团体寿险是一种常见的员工福利，通常由雇主为员工群体投保。保费可能完全由雇主承担，也可能由雇主和员工共同分担。这种保险能够为员工提供基本的人寿保障，且因为规模效应，保费通常较为优惠。

考察: 人寿保险类型。(终身寿险、定期寿险、终结寿险、团体寿险的特点与区别)

7. An actuary at a life insurance company is analyzing longevity and mortality risks in their insurance portfolio. During the risk assessment presentation, which of the following statements about longevity and mortality risks faced by life insurance companies is INCORRECT?

- A. Improvements in medical conditions and nutrition lead to longer life expectancy, which is favorable for annuity insurance.
- B. Factors such as wars and epidemics may cause earlier-than-expected deaths, which is favorable for whole life insurance.
- C. Annuity insurance faces longevity risk because longer policyholder lifespans result in more annuity payments.
- D. Whole life insurance faces mortality risk because when policyholders die young, insurance companies need to pay higher claims.

答案:D

解析:

A 选项正确。

- 医疗技术进步和生活水平提高导致人均寿命延长，这对提供年金保险的公司是有利的。因为年金保险的保费会在较长时间内持续收取，而且投保人活得越长，公司就能收取更多的保费，从而增加投资收益。

B 选项正确。

- 当发生战争、流行病等导致死亡率上升的事件时，终身寿险公司实际上会获益。因为这意味着公司需要支付的期限会缩短，而已收取的保费可以产生更多的投资收益。这种说法虽然听起来有些不近人情，但从保险公司的风险管理角度来说是正确的。

C 选项正确。

- 年金保险确实面临长寿风险。当投保人寿命延长时，保险公司需要支付更多的年金给付。这种风险需要通过精确的精算计算和适当的定价来管理，以确保公司能够履行长期的支付义务。

D 选项错误。

- 这个说法混淆了终身寿险的风险特征。实际上，终身寿险面临的是长寿风险而不是死亡风险。当投保人过早死亡时，保险公司确实需要支付死亡给付，但由于收取的保费较少，这对保险公司是不利的。相反，如果投保人活得较长，公司可以收取更多保费并获得更多投资收益。

考察: 保险公司风险类型（长寿风险、死亡风险、不同类型保险的风险特征）

8. A risk analyst at a property and casualty (P&C) insurance company is reviewing key performance ratios. The company reports the following metrics:

Component	Ratio
Investment income	6%
Dividends	3%
Loss ratio	71%
Expense ratio	25%

Based on the information provided, what is this company’s operating ratio?

- A. 90%
- B. 93%
- C. 96%
- D. 99%

答案:B

解析:

步骤 1：理解运营比率的计算公式。

- $\text{运营比率} = \text{损失率} + \text{费用率} + \text{股息率} - \text{投资收益率}$

步骤 2：计算运营比率。

- $\text{运营比率} = 71\% + 25\% + 3\% - 6\% = 93\%$

拓展：计算其他关键比率作为参考。

- $\text{综合比率} = \text{损失率} + \text{费用率} = 71\% + 25\% = 96\%$
- $\text{计入股息后的综合比率} = \text{损失率} + \text{费用率} + \text{股息率} = 71\% + 25\% + 3\% = 99\%$

分析比率

- 93% 的运营比率表明公司在考虑投资收益后的整体运营效率
- 96% 的综合比率反映了承保业务的基本盈利能力
- 99% 的计入股息后综合比率显示了包含股东回报在内的总体成本结构

考察: 保险公司比率分析（运营比率计算、综合比率计算、股息影响评估）

9. A chief underwriter at a life insurance company is discussing risk assessment challenges with the actuarial team. During their review of adverse selection issues, which of the following statements about adverse selection in life insurance is correct?

- A. Adverse selection primarily affects insurance companies through their ability to accurately price risk based on comprehensive market data.

- B. Adverse selection in life insurance leads to a balanced distribution of risk profiles among policyholders through natural market mechanisms.
- C. Adverse selection can be mitigated by requiring medical examinations from insurance applicants.
- D. Adverse selection presents similar challenges across all insurance types due to standardized information collection processes.

答案:C

解析:

A 选项错误。

- 逆向选择主要是由于保险公司无法获得完整的个人风险信息，而不是市场数据不足。即使有全面的市场数据，个体层面的信息不对称问题仍然存在，这才是导致逆向选择的根本原因。

B 选项错误。

- 逆向选择实际上导致风险分布的失衡，而不是平衡。高风险个体更倾向于购买保险，而低风险个体可能选择不投保，这种自我选择会导致保险池中高风险个体比例过高。

C 选项正确。

- 要求体检确实是减少信息不对称的有效手段。通过体检，保险公司可以更准确地评估投保人的健康状况，从而更合理地定价，有效缓解逆向选择问题。这种做法直接解决了信息不对称的核心问题。

D 选项错误。

- 不同类型保险面临的逆向选择挑战实际上差异很大。人寿保险中的健康状况信息更难获取和验证，而财产保险的风险评估相对更容易，因为财产状况通常更容易观察和评估。

考察: 保险中的逆向选择。（体检是缓解逆向选择的有效手段）

10. A portfolio manager at an investment firm is analyzing catastrophe (CAT) bonds using the Capital Asset Pricing Model (CAPM). During a client presentation about alternative investments, which of the following statements represents a misconception about CAPM and CAT bonds?

- A. CAT bonds may have risks that are uncorrelated or nearly uncorrelated with risks in other portfolios, thus providing diversification benefits.
- B. CAT bonds, due to their risk characteristics, provide lower returns than suggested by the Capital Asset Pricing Model.
- C. The Capital Asset Pricing Model suggests that when a security’s returns are uncorrelated with market returns, its expected return should be the risk-free rate.
- D. CAT bonds attract investors with their potentially high returns, even though they may involve higher risks.

答案:B

解析:

A 选项正确，不选。

- CAT 债券的风险主要来源于自然灾害，这种风险与股票市场、经济周期等传统金融市场风险因素几乎没有相关性。正是这种低相关性使得 CAT 债券成为投资组合多样化的有效工具。

B 选项错误。

- 这个说法与 CAT 债券的实际特征相反。由于 CAT 债券具有独特的风险特性和低相关性，它们通常提供比 CAPM 模型预测更高的回报，而不是更低的回报。这种额外回报正是对其特殊风险的补偿。

C 选项正确，不选。

- 这符合 CAPM 的基本原理。当一个证券的收益与市场收益完全不相关时（即 $\beta = 0$ ），根据 CAPM，其预期收益率应等于无风险利率。这是因为不相关的风险可以通过多样化完全消除。

D 选项正确，不选。

- CAT 债券确实提供较高的潜在回报，这是为了补偿其独特的巨灾风险。尽管这些债券可能面临突发性的重大损失，但其高回报潜力仍然吸引着寻求多样化和高收益的投资者。

考察: CAT 债券特征。（低相关性）

11. A risk management consultant is discussing moral hazard issues across different insurance products with a group of insurance executives. All of the following statements about moral hazard and its effects are correct EXCEPT:

- A. Banks may tend to adopt riskier strategies when depositors have government insurance, as insurance reduces the likelihood of depositors moving their funds elsewhere.
- B. When house insurance fully protects against theft, policyholders may become less willing to install alarm systems and cameras.
- C. Due to having health insurance, policyholders may visit doctors more frequently.
- D. Moral hazard is a major concern in life insurance because people might pursue risky activities like skydiving after purchasing life insurance.

答案:D

解析:

A 选项正确，不选。

- 这描述了存款保险带来的典型道德风险。当存款人的资金受到政府保险保护时，银行管理层可能会采取更激进的投资策略，因为他们知道存款人不太可能因为担心风险而撤资。这种行为可能导致整个金融系统风险的增加。

B 选项正确，不选。

- 这是财产保险中道德风险的典型表现。当保险完全覆盖盗窃损失时，投保人可能会减少在防盗措施上的投入，因为即使发生盗窃，损失也会得到完全赔偿。这种行为增加了盗窃发生的可能性。

C 选项正确，不选。

- 这反映了健康保险中常见的道德风险。由于医疗费用有保险覆盖，投保人可能会过度使用医疗服务，包括一些非必要的就医，这导致医疗资源的低效使用和保险成本的上升。

D 选项错误。

- 这种说法误解了人寿保险中道德风险的实际情况。实际上，人寿保险中的道德风险相对较小，因为很少有人会因为购买了人寿保险就故意从事危险活动。人们对生命的珍视远超过保险赔付的价值。

考察: 道德风险分析。（人寿保险中的道德风险相对较小）

12. An insurance company’s risk management team is reviewing various methods to reduce moral hazard in their insurance products. Which of the following statements about methods to reduce moral hazard is correct?

- A. Insurance companies primarily rely on risk education and awareness programs to address moral hazard concerns in their insurance products.
- B. Insurance companies reduce moral hazard through coinsurance mechanisms, paying only a certain percentage of losses.
- C. Insurance companies focus on comprehensive coverage policies to build trust and reduce moral hazard through enhanced customer relationships.
- D. Insurance companies utilize medical examinations and health disclosures as their primary tools for controlling moral hazard in health insurance products.

答案:B

解析:

A 选项错误。

- 虽然风险教育和意识培养计划有其价值，但这并不是控制道德风险的主要方法。保险公司主要依靠具体的经济激励机制，如免赔额和共同保险等方式来控制道德风险。

B 选项正确。

- 共同保险机制确实是控制道德风险的有效方法。通过要求投保人分担一定比例的损失，可以确保投保人对避免损失保持关注。当投保人需要承担部分损失时，他们更可能采取合理的预防措施。

C 选项错误。

- 提供全面保障反而可能加剧道德风险问题。保险公司通常会设置一定的保障限制和赔付上限，而不是提供完全覆盖，以确保投保人对风险保持警惕。

D 选项错误。

- 体检和健康告知主要用于解决逆向选择问题，而不是控制道德风险。这些措施帮助保险公司在承保前了解投保人的实际健康状况，但对于控制承保后的道德风险效果有限。

考察: 控制道德风险。(别与逆向选择混了)

13. A banking regulator is evaluating different policies to strengthen the stability of the banking system. Which of the following actions in the banking system is most likely intended to address the problem of moral hazard?

- A. Deposit insurers charge risk-based premiums.
- B. Banks increase loans to higher-risk borrowers.
- C. Governments implement deposit insurance programs.
- D. Banks increase the interest rates they offer to depositors.

答案:A

解析:

A 选项正确。

- 基于风险的保费是控制道德风险的有效措施。当存款保险机构根据银行的风险水平收取不同费率的保费时，可以激励银行采取更审慎的经营策略，因为承担更高风险将导致更高的保险成本。

B 选项错误。

- 增加对高风险借款人的贷款实际上会加剧道德风险问题，而不是解决它。这种行为本身就是道德风险的一种表现。

C 选项错误。

- 存款保险计划虽然能够保护存款人，但实际上可能增加道德风险，因为它可能导致银行承担更多风险，知道存款人的资金受到保护。

D 选项错误。

- 提高存款利率主要是为了吸引存款，与控制道德风险没有直接关系。这种做法可能反而会迫使银行寻求更高风险的投资来支付更高的利息。

考察: 银行体系道德风险控制（基于风险的保费）

14. A human resources director at a mid-sized technology company is evaluating unemployment insurance coverage for their employees. Due to recent industry volatility and increasing layoffs in the tech sector, the company is considering implementing a comprehensive unemployment insurance program. When considering this type of insurance, which of the following risks are applicable for the company?

- A. Only Moral hazard
- B. Only Adverse selection

- C. Both Moral hazard and adverse selection
- D. Neither moral hazard nor adverse selection

答案:C

解析:

道德风险的表现:

- 已有工作的员工可能会改变行为, 因为知道失业后有保险赔付, 他们可能不会像没有保险时那样努力工作或担心被解雇
- 这种心理变化会降低员工的工作积极性和责任心, 增加公司的用工风险

逆向选择的表现:

- 失业保险更可能吸引那些工作不稳定或所在行业/岗位风险较高的人
- 这类人更可能申请有失业保险的工作, 导致公司承担更高的保险成本

综合分析:

- 失业保险同时面临道德风险和逆向选择的挑战。这要求公司在设计保险方案时需要同时考虑这两种风险的防范措施, 可能需要设置等待期、部分赔付等机制来平衡保障和风险

考察: 道德风险识别和逆向选择分析 (失业保险风险: 道德风险和逆向选择)

15. A compliance officer at an insurance company is reviewing the capital requirements under the Solvency II framework. During a training session for new employees, which of the following statements about the capital requirements is correct?

- A. Insurance companies maintain flexible capital thresholds under SCR, allowing for temporary capital adjustments based on market conditions.
- B. The MCR serves as a strategic planning tool, providing insurance companies with guidance for optimal capital allocation.
- C. The MCR is typically between 25% and 45% of the SCR, ensuring insurance companies maintain adequate capital buffers.
- D. The Solvency II framework emphasizes market risk management through dynamic capital requirements that adapt to economic cycles.

答案:C

解析:

A 选项错误。

- SCR 是一个严格的资本要求标准, 而不是灵活的阈值。当保险公司的资本低于 SCR 时, 必须立即采取措施增加资本, 而不能根据市场条件进行临时调整。

B 选项错误。

- MCR 是强制性的最低资本要求, 而不是战略规划工具。当资本低于 MCR 时, 保险公司将面临严格的监管限制, 这是为了保护投保人利益的最后防线。

C 选项正确。

- MCR 确实设定在 SCR 的 25% 到 45% 之间, 这个比例设置确保了保险公司维持足够的资本缓冲, 既不会过度占用资本, 也能为突发事件提供基本保障。

D 选项错误。

- Solvency II 框架要求对多种风险进行全面评估, 包括市场风险、承保风险和运营风险等, 而不是仅强调市场风险管理。资本要求的设定是基于综合风险评估, 而不是简单地随经济周期调整。

考察: Solvency II 框架 (SCR 和 MCR 的资本要求比例关系)

16. A pension fund manager at a large investment firm is currently evaluating the differences between defined benefit plans and defined contribution plans for their clients. The manager is particularly focused on understanding the risk allocation and account structures associated with each type of plan. Based on the descriptions provided, which of the following statements is correct?

- A. In defined benefit plans, investment performance directly impacts employee benefits, while in defined contribution plans, the employer guarantees a minimum return regardless of market conditions.
- B. Defined benefit plans maintain separate investment accounts for each participant to ensure personalized risk management, while defined contribution plans pool all assets into a common fund.
- C. Defined contribution plans involve individual accounts associated with each employee, whereas defined benefit plans involve a pooled account for all employees, with all contributions going into this common account.
- D. The risk in defined benefit plans is shared equally between employer and employee through a dynamic allocation mechanism that adjusts based on funding status.

答案:C

解析:

A 选项错误。

- 这个说法完全颠倒了两种计划的特征。在确定福利计划中，投资表现的风险由雇主承担，员工的福利是根据工作年限和工资确定的。而在确定缴费计划中，投资表现直接影响员工的收益，雇主不保证最低回报。

B 选项错误。

- 这个说法与实际情况相反。确定福利计划是采用统一的资金池进行管理，而确定缴费计划才是为每个员工维护单独的账户。这种错误的描述混淆了两种计划的基本账户结构。

C 选项正确。

- 确定缴费计划确实为每个员工设立个人账户，员工的养老金完全取决于其账户中的资金。而确定福利计划采用统一的资金池，所有员工的缴费都进入同一个账户，这种结构有助于实现规模效应和统一管理。

D 选项错误。

- 确定福利计划中的风险并不是平均分配的。实际上，当养老金义务超过资产时，雇主必须承担全部差额，这种风险分配是明确的而不是动态的。这种说法误解了确定福利计划中的风险分配机制。

考察: 养老金计划中的风险分配和账户结构。(对比 DB 和 DC 的特点)

17. A financial analyst at a regulatory agency is comparing the capital requirements, risk management practices, capital calculation methods, regulatory frameworks, and transparency and disclosure between banks and insurance companies. Based on the descriptions provided, which of the following statements is correct?

- A. Insurers are not allowed to use internal models to calculate capital requirements, as banks do, but only standardised models approved by regulators.
- B. The regulatory frameworks for both banks and insurance companies emphasize similar risk categories, with credit risk being the primary focus for both sectors.
- C. Banks are required to disclose more information than insurance companies, including capital status, risk management practices, and financial conditions.
- D. Insurance companies worldwide follow a unified regulatory approach through the International Insurance Standards, providing consistent oversight across all major markets.

答案:C

解析:

A 选项错误。

- 银行和保险公司都可能使用内部模型来计算资本要求，但这些模型必须经过监管机构的批准。这确保了模型的可靠性和准确性。

B 选项错误。

- 银行和保险公司的监管框架关注的风险类别存在显著差异。银行主要关注信用风险、市场风险和操作风险，而保险公司更注重投资风险和承保风险。这反映了两个行业业务模式的本质差异。

C 选项正确。

- 银行确实需要披露比保险公司更多的信息，包括资本状况、风险管理实践和财务状况。这是由于银行在金融系统中的关键角色和其复杂的风险结构所决定的。

D 选项错误。

- 保险公司的监管框架在全球范围内并不统一。虽然欧盟地区采用 Solvency II 框架，但其他地区的监管要求和标准可能存在显著差异，这导致了全球保险监管的分散性。

考察: 银行和保险公司资本要求和风险管理实践的比较。(信息披露要求的差异)

18. Suppose that in a certain defined benefit plan the following simple situation exists. Employees work for 40 years with a salary that increases exactly in line with inflation. The pension is 60% of the final salary and increases exactly in line with inflation. Employees always live for 25 years after retirement. The funds in the pension plan are invested in bonds that earn the inflation rate. Which of the following is the best estimate of the percentage of the employee’s salary that must be contributed to the pension plan? (Hint: You should do all calculations in real rather than nominal terms so that salaries and pensions are constant and the interest earned is zero.)

- A. 37.5%
- B. 43.75%
- C. 22.5%
- D. 27.5%

答案:A

解析:

步骤 1：设定工资和养老金

- 假设员工的工资为 X ，养老金为最终工资的 60%，即 $0.6X$ 。

步骤 2：计算养老金的现值

- 员工退休后活 25 年，因此养老金的现值为 $25 \times 0.6X = 15X$ 。

步骤 3：设定缴费率

- 假设缴费率为 R ，则养老金计划的缴费总额为 $40XR$ 。

步骤 4：求解缴费率

- 设定方程 $40XR = 15X$ ，解得 $R = \frac{15}{40} = 0.375$ 。

考察: 养老金计划中的风险分配和账户结构。(这题简单熟悉一下即可)

19. A compliance officer at an insurance company is reviewing the capital requirements under the Solvency II framework. During a training session for new employees, which of the following statements about the Solvency II framework is true?

- A. If capital falls below the solvency capital requirement, an insurance company is not allowed to take on further business.
- B. If capital falls below the solvency capital requirement, an insurance company’s policies may be transferred to another insurance company.
- C. Insurance companies are only required to formulate a solvency capital plan if capital falls below the minimum capital requirement.
- D. None of the above

答案:D

解析:

A 选项错误。

- 根据 Solvency II 框架，保险公司在资本低于偿付能力资本要求 (SCR) 时，必须制定计划以恢复资本水平，但并不立即禁止承接新业务。

B 选项错误。

- 保险公司的保单转移通常发生在资本低于最低资本要求 (MCR) 时，而不是 SCR。

C 选项错误。

- 保险公司在资本低于 SCR 时也需要制定资本计划，而不仅仅是在低于 MCR 时。

D 选项正确。

- 如果资本低于 SCR，保险公司必须制定计划以恢复资本水平。如果资本低于 MCR，保险公司可能不被允许承接更多业务，其保单可能会被转移。

考察: Solvency II 框架（资本要求和资本计划制定）

3 Financial Institutions 考点:Mutual funds and Hedge Funds

1. Consider an open-end mutual fund that owns \$900 million in equities, \$400 million in bonds, and \$50 million in cash. They owe \$2 million in management fees payable at this point in the quarter and they have 45 million shares outstanding. What is this fund’s NAV?

- A. \$28.50
- B. \$30.00
- C. \$31.00
- D. \$31.33

答案:D

解析:

公式：计算每股净值（NAV）

$$NAV = \frac{\text{总资产} - \text{负债}}{\text{发行在外的股份数}}$$

步骤 1：计算总资产

- 股票资产：\$900,000,000
- 债券资产：\$400,000,000
- 现金：\$50,000,000
- 总资产 = \$900,000,000 + \$400,000,000 + \$50,000,000 = \$1,350,000,000

步骤 2：扣除负债

- 管理费负债：\$2,000,000
- 净资产 = 总资产 - 管理费负债 = \$1,350,000,000 - \$2,000,000 = \$1,348,000,000

步骤 3：计算每股净值（NAV）

- 发行在外的股份数：45 百万股
- $NAV = \frac{\$1,348,000,000}{45,000,000} = \29.96

步骤 4：投资者交易

- 投资者希望以每股 \$29.96 的价格购买或出售基金。
- 如果投资 \$30,000，则购买的股份数 = $\frac{30,000}{29.96} \approx 1,001.34$ 股。

考察: mutual fund 的 NAV 计算。

2. A hedge fund manager is currently evaluating the performance fees and management fees structure of their fund. The manager is particularly focused on understanding how these fees impact the net returns for investors. During a strategy meeting, the manager poses the following question: If the hedge fund charges a 2% management fee and a 20% performance fee, and an investor desires a net return of 20% after all fees, what gross return must the hedge fund achieve to meet this target? Assume the performance fee is calculated on the net gain after the management fee.

- A. 27%
- B. 15%
- C. 21.6%
- D. 20%

答案:A

解析:

理解对冲基金费用:

- 对冲基金通常收取管理费和业绩费。
- 管理费是总资产的固定百分比，这里为 2%。
- 业绩费是净收益的百分比，这里为 20%，在扣除管理费后计算。

步骤 1：设定方程。

- 设总回报为 X 。
- 投资者要求的净回报为 20%。
- 总费用包括 2% 的管理费和净收益的 20% 业绩费。
- 总费用 = $0.02 + 0.2(X - 0.02)$ 。
- 方程为： $X - 0.02 - 0.2(X - 0.02) = 0.2$ 。

步骤 2：求解方程。

- 解得： $X = \frac{0.216}{0.8} = 0.27$ 。

考察: 计算对冲基金的总回报以满足净回报目标。（扣除管理费后计算）

3. Starbright Investments is a mutual fund based in the United States, with annual returns over the past five years of: +6.5%, +14.0%, +19.0%, +4.5%, +17.5%. Which of the following statements about this mutual fund is correct?

- A. The geometric average return calculation suggests that Starbright’s five-year performance indicates strong market outperformance with returns exceeding 12.5%.

- B. Starbright maintains flexible disclosure requirements and leverage usage policies similar to private equity funds, while providing quarterly NAV calculations for investor reference.
- C. Starbright’s consistent above-market returns suggest potential operational irregularities in its investment process, raising concerns about risk management practices and compliance standards.
- D. Starbright is primarily regulated by the Securities and Exchange Commission (SEC), which prohibits illegal ”late trading” practices while permitting market timing based on public information.

答案:D

解析:

A 选项错误。

- 通过计算 Starbright 的五年几何平均回报率（将 $1.065 \times 1.14 \times 1.19 \times 1.045 \times 1.175$ 开五次方根），实际结果约为 12.1%，低于 12.5%，因此这个说法不准确。

B 选项错误。

- 作为共同基金，Starbright 必须遵循严格的披露要求，包括每日计算 NAV、限制杠杆使用，并允许投资者随时赎回。这些要求是强制性的，而不是灵活的，与私募股权基金的运作方式有本质区别。

C 选项错误。

- 仅仅基于过去的正回报就推断存在运营违规是不恰当的。基金的良好表现可能源于合法的投资策略、专业的风险管理和严格的合规标准。
- 监管机构评估基金合规性时会考虑多个因素，包括投资流程的透明度、风险控制措施和内部治理结构，而不仅仅是回报率。

D 选项正确。

- SEC 作为主要监管机构，对共同基金实施严格监管，包括禁止” 延迟交易” 这种在市场收盘后利用新信息进行交易的非法行为。
- “市场时机交易” 虽然不被禁止，但必须基于公开信息进行，这体现了监管机构在维护市场公平和效率方面的平衡。
- SEC 的监管框架旨在保护投资者利益，同时允许基金管理人在合规前提下进行合理的投资决策。

考察: 共同基金的特点。（监管要求和信息披露）

4. An investment advisor at a financial services firm is discussing different types of investment funds with a group of new clients. During the session, the advisor poses the following question: Which of the following statements is correct regarding investment funds available to all investors?

- A. Open-end mutual funds provide flexible trading options through dynamic pricing mechanisms that allow investors to set specific execution prices.
- B. Stop orders can be used on closed-end funds.
- C. Open-end mutual funds utilize real-time pricing systems that enable continuous trading throughout market hours.
- D. ETFs maintain strict trading limitations that prevent short selling to ensure market stability and protect investor interests.

答案:B

解析:

A 选项错误。

- 开放式共同基金并不提供灵活的交易选项，它们只能在下一个可用的净资产价值 (NAV) 进行交易。这是因为 NAV 是在市场关闭后计算的，投资者无法设定具体的执行价格。

B 选项正确。

- 止损订单确实可以用于封闭式基金，因为它们在证券交易所交易，允许使用各种订单类型，包括止损订单。这种灵活性源于其交易所上市的性质。

C 选项错误。

- 开放式共同基金不使用实时定价系统，它们的交易价格是基于每日收盘后计算的 NAV，投资者无法在交易时段内进行连续交易。

D 选项错误。

- ETF 实际上允许进行卖空交易，这是因为它们在证券交易所交易，具有与普通股票类似的交易特性。ETF 的卖空能力是其灵活性的重要体现。

考察: 三类基金的特点。（封闭式基金可以使用止损订单）

5. A financial advisor at a wealth management firm is conducting a seminar for new investors on the topic of mutual funds. During the presentation, she notices that many participants are confused about the differences between open-end and closed-end funds. To clarify these concepts, she presents several statements about fund characteristics to her audience. Looking at their puzzled expressions, she asks them to identify which of these statements accurately describes the fundamental differences between these two investment vehicles?

- A. Open-end funds maintain a stable share structure through market-based pricing mechanisms, while closed-end funds adjust their shares based on daily investor flows.
- B. Open-end funds trade at market-determined prices that reflect supply and demand dynamics, similar to exchange-traded securities.
- C. Open-end funds can subscribe and redeem at their net asset value (NAV), while closed-end funds trade on exchanges with prices that may differ from their NAV.
- D. Both open-end and closed-end funds are subject to the same regulatory frameworks, such as the Basel Accords or Solvency II framework.

答案:C

解析:

A 选项错误。

- 这个说法与实际情况相反。开放式基金的股份数量会随着投资者的申购和赎回而变化，而封闭式基金才是维持固定的股份结构。这种错误的描述混淆了两种基金的基本运作机制。

B 选项错误。

- 开放式基金的交易价格是按照其净资产价值（NAV）确定的，而不是由市场供需决定。这种说法错误地将开放式基金的定价机制与封闭式基金混淆。

C 选项正确。

- 开放式基金确实允许投资者按照 NAV 进行申购和赎回，而封闭式基金在交易所交易，其价格可能因市场供需关系而偏离 NAV，形成溢价或折价。这准确反映了两种基金的交易特点。

D 选项错误。

- 开放式基金和封闭式基金并不都受到相同的监管框架的约束。例如，巴塞尔协议主要适用于银行业，而 Solvency II 框架适用于保险公司。基金通常受到其他类型的监管，如美国证券交易委员会（SEC）的监管。

考察: 开放式和封闭式基金的特点。（对比这两者的交易机制和定价特点）

6. A risk analyst at a fixed-income investment firm is conducting a training session on market misconduct. When discussing various types of improper trading practices, which of the following statements represents a misunderstanding of these practices?

- A. Late trading involves accepting orders after the market close, potentially reversing trades based on post-close events, and is illegal.

- B. Market timing occurs when fund assets are infrequently traded, leading to stale pricing in NAV calculations, which may attract regulatory scrutiny but is not inherently illegal.
- C. Front-running involves trading ahead of known upcoming transactions, potentially causing price movements, and is illegal and prosecutable.
- D. Directed brokerage involves an implicit agreement where mutual funds direct trades to brokers in exchange for brokers investing their clients in the mutual funds, a strongly discouraged practice considered illegal.

答案:D

解析:

A 选项正确，不选。

- 延迟交易是指在市场关闭后接受订单，这种行为可能导致交易者利用市场关闭后的信息进行交易，从而获得不公平的优势。因此，这种行为被认为是非法的，并受到严格的监管。

B 选项正确，不选。

- 市场时机选择发生在基金资产不活跃交易时，导致净资产价值（NAV）计算中出现陈旧定价。这种行为可能引起监管机构的关注，因为它可能导致投资者的利益受损，但本身并不违法，除非涉及到利用非公开信息。

C 选项正确，不选。

- 前瞻性交易涉及在已知即将发生的交易之前进行交易，这可能导致市场价格的上涨或下跌，从而使得交易者获利。这种行为被认为是非法的，因为它利用了未公开的信息，违反了市场公平原则。

D 选项错误，不选。

- 指定经纪涉及一种默契协议，其中共同基金会将直接交易导向特定经纪人，以换取经纪人将其客户投资于共同基金。这种做法虽然不违法，但被认为是不道德的，因为它可能导致利益冲突，并且不符合最佳执行的原则。

考察: 不良交易行为。(不是每个都非法)

7. A portfolio manager at a hedge fund is explaining the differences between hedge funds and mutual funds to a group of potential investors. The manager highlights the unique characteristics and regulatory requirements of each type of fund. Which of the following statements about hedge funds and mutual funds is incorrect?

- A. Hedge funds do not require daily calculation of net asset value (NAV), whereas mutual funds do.
- B. Hedge funds can be sold to all types of investors, including ordinary retail investors.
- C. Hedge funds can use leverage and long-short strategies, whereas mutual funds typically cannot use leverage.
- D. Hedge funds may charge additional incentive fees, whereas mutual funds typically do not charge such fees.

答案:B

解析:

A 选项正确。

- 对冲基金不需要每日计算净资产价值（NAV），而共同基金需要。这是因为共同基金的投资者可以随时赎回股份，因此需要每日更新净值以反映基金的市场价值。

B 选项错误。

- 对冲基金仅限于富有和复杂的投资者以及机构，而不是所有类型的投资者。对冲基金通常面向合格投资者，以规避某些监管要求。

C 选项正确。

- 对冲基金可以使用杠杆和长短仓策略，而共同基金通常不能使用杠杆。这使得对冲基金能够在市场波动中灵活调整投资组合。

D 选项正确。

- 对冲基金可能会收取额外的激励费用，而共同基金通常不收取此类费用。激励费用通常与基金的业绩挂钩，旨在激励基金经理实现更高的回报。

考察: 对冲基金和共同基金的特点。(对冲基金通常面向合格投资者，以规避某些监管要求。)

8. A hedge fund manager is explaining the rationale behind implementing a one-year lock-up period to a group of potential investors. The manager highlights the importance of this policy in relation to the fund’s investment strategy and asset liquidity. Considering the characteristics of hedge fund investments, what is the primary reason for implementing a lock-up period?

- A. Hedge funds primarily invest in highly liquid assets, and the lock-up period is implemented to reduce frequent trading by investors.
- B. Hedge funds include some illiquid assets in their portfolio, and the lock-up period is implemented to avoid forced sales under unfavorable conditions, as many hedge fund investments cannot be unwound quickly.
- C. Hedge fund strategies mainly rely on short-term market fluctuations, and the lock-up period is implemented to ensure investors do not redeem during market volatility.
- D. Hedge fund investments are entirely based on publicly traded stocks, and the lock-up period is implemented to encourage long-term investment by investors.

答案:B

解析:

A 选项错误。

- 如果投资组合主要由高流动性资产组成，那么实施锁定期政策以减少投资者的频繁交易是不合理的。高流动性资产通常不需要通过锁定期来限制交易。

B 选项正确。

- 对冲基金的投资包括一些流动性较差的资产，锁定期的实施是为了避免在不利条件下被迫出售这些资产，因为许多对冲基金投资不易在短时间内解除。此外，一些对冲基金投资是基于特定资产的错误定价进行的赌注，而这些交易可能需要时间来解除。

C 选项错误。

- 虽然锁定期政策可能有助于减少市场波动期间的赎回，但这并不是实施锁定期政策的最直接原因，特别是如果投资策略主要基于短期市场波动。

D 选项错误。

- 如果投资完全基于公开交易的股票，那么这些资产通常具有较高的流动性，不需要通过锁定期政策来鼓励长期投资。

考察: 对冲基金的锁定期（不用马上平仓）

9. A hedge fund manager is discussing the fee structure of their fund with a group of potential investors. The manager emphasizes the importance of understanding various clauses that impact investor returns. Which of the following statements about hedge fund fee structures is correct?

- A. The hurdle rate serves as a performance benchmark that automatically adjusts based on market conditions to ensure fair compensation for fund managers.
- B. The high-water mark clause primarily functions to maintain consistent fee structures across market cycles, with losses being reset annually.
- C. The clawback clause allows fund managers to directly return a portion of incentive fees to investors to compensate for future losses.

D. The proportional adjustment clause is part of the high-water mark clause, specifying that previous loss recovery amounts must be proportionally adjusted when investors redeem.

答案:D

解析:

A 选项错误。

- 门槛收益率是一个固定的最低回报要求，而不是根据市场条件自动调整的基准。它是在基金成立时就确定的固定比率，用于确定是否收取激励费用的标准。

B 选项错误。

- 高水位线条款的主要功能是确保基金在弥补之前的亏损前不收取业绩费，而不是维持一致的费用结构。亏损也不会年度重置，而是持续累积直到被新的收益完全弥补。

C 选项错误。

- 回拨条款实际上允许投资者将部分或全部先前的激励费用应用于当前亏损，而不是基金经理直接返还给投资者。这部分费用是保留在回收账户中，用于补偿投资者未来亏损的一定比例。

D 选项正确。

- 比例调整条款是高水位线条款的一部分，它规定了在投资者撤资时，需要按比例调整回收的先前亏损金额，这是为了公平地分配亏损回收的责任。

考察: 对冲基金的费用结构。（比例调整条款是高水位线条款的一部分）

10. A financial analyst at a large investment firm is tasked with educating new employees on the distinctions between hedge funds and mutual funds. During a training session, the analyst presents the following question to assess their understanding: Which of the following statements should be considered correct regarding the differences between hedge funds and mutual funds?

- A. Unlike mutual funds, hedge funds do not need to provide the redemption of shares at any time the investor chooses or a daily calculated net asset value.
- B. Mutual funds offer professional management, instant diversification, and the ability to commingle funds with other investors, while hedge funds do not offer all of these features.
- C. Hedge funds are marketed to any and all investors, while mutual funds are restricted to only wealthy and sophisticated investors.
- D. Both mutual funds and hedge funds are permitted to use leverage.

答案:A

解析:

A 选项正确。

- 对冲基金不需要提供投资者随时选择赎回份额的权利，也不需要每日计算净资产价值（NAV）。这使得对冲基金在流动性管理上更加灵活，因为它们可以投资于流动性较低的资产，而不必担心每日赎回的压力。

B 选项错误。

- 共同基金确实提供专业管理、即时分散投资以及与其他投资者混合资金的能力。这些特性使得共同基金成为普通投资者的理想选择，因为它们提供了多样化和专业管理的优势。

C 选项错误。

- 对冲基金通常仅限于富裕和成熟的投资者，因为它们涉及更高的风险和复杂的投资策略，而共同基金则面向所有类型的投资者，提供更为保守的投资选择。

D 选项错误。

- 共同基金通常不能使用杠杆，因为这会增加投资风险，而对冲基金可以使用杠杆进行投资，以追求更高的回报。

考察: 共同基金和对冲基金的区别（共同基金通常不能使用杠杆）

11. A financial analyst is evaluating the reliability of performance reports from hedge funds. Understanding the biases in these reports is crucial for assessing their true performance. Based on the descriptions provided, which of the following statements about hedge fund performance reporting biases is incorrect?

- A. Hedge fund performance reports may exhibit measurement bias because funds can choose whether to report their performance.
- B. Backfill bias occurs when a hedge fund begins reporting its returns, and its previous historical return data is added to the database.
- C. Hedge fund performance reports are generally more reliable than mutual fund performance reports because they are passively managed.
- D. Hedge fund backfill bias may lead to an inaccurate reflection of a fund's historical performance, affecting the reliability of benchmarks.

答案:C

解析:

A 选项正确。

- 对冲基金的绩效报告可能存在测量偏差，因为基金可以选择是否报告其绩效，这可能导致只有表现好的基金才报告数据。

B 选项正确。

- 回填偏差发生在对冲基金开始报告其回报时，其先前的历史回报数据被添加到数据库中，这可能导致对冲基金基准的可靠性问题。

C 选项不正确。

- 对冲基金的绩效报告通常不如共同基金的绩效报告可靠，因为它们是自愿报告的，并且可能存在回填偏差，而不是因为它们是被动管理的。

D 选项正确。

- 对冲基金的回填偏差可能导致基金的历史表现被不准确地反映，从而影响基准的可靠性。

考察: 对冲基金的绩效报告。（measurement bias 和 backfill bias）

12. A hedge fund analyst is preparing educational materials for a client presentation on various investment strategies. During their research, they encounter several descriptions of hedge fund approaches in industry literature. While most of these descriptions accurately reflect common practices, one of them represents a misconception about how these strategies actually work. Which of these descriptions reflects a misunderstanding of hedge fund strategies?

- A. Long-short equity hedge funds invest by identifying undervalued and overvalued stocks through fundamental analysis.
- B. Dedicated short hedge funds typically seek out companies with poor financial performance that the market has not yet recognized and short their stocks.
- C. Distressed debt hedge funds usually purchase bonds of companies nearing bankruptcy, expecting high returns after the company restructures.
- D. Merger arbitrage hedge funds primarily rely on insider information to trade, aiming to profit once the merger is completed.

答案:D

解析:

A 选项正确，不选。

- 多空股票对冲基金确实通过基本面分析寻找被低估和被高估的股票进行投资。这种策略依赖于对公司基本面的深入研究，以识别市场定价错误。

B 选项正确，不选。

- 专门做空对冲基金专注于寻找被高估的公司并做空其股票，通常寻找财务表现不佳但未被市场捕捉的公司。这种策略利用市场对公司财务状况的误判。

C 选项正确，不选。

- 困境债务对冲基金通常在公司接近破产时购买其债券，以期待公司重组后获得高额回报。这种策略依赖于对破产和重组过程的深入理解。

D 选项错误。

- 合并套利对冲基金依赖公开信息进行交易，而不是内部信息。这种策略利用公开宣布的合并信息来寻找套利机会，而不是依赖于非法的内部信息。

考察: 对冲基金的策略。(合并套利对冲基金依赖公开信息进行交易)

4 Financial Institutions 考点:Central Counterparties

1. A junior trader on a derivatives desk at Quantum Securities is reviewing different execution venues for their interest rate swaps portfolio. His supervisor suggests moving some vanilla swaps from OTC to exchange trading to improve operational efficiency. Which of the following statements correctly describes an advantage of exchange trading systems?

- A. Contract terms can be flexibly customized to meet specific trading needs.
- B. Central clearing and standardized margining systems help minimize counterparty risk.
- C. Traders can directly negotiate prices and quantities with their preferred counterparties.
- D. Voice trading records provide documentation in case of trade disputes.

答案:B

解析:

A 选项错误。

- 交易所产品的合约条款是标准化的，而不是可定制的。例如，期货合约的到期日、规模、交割方式等都是预先规定的。灵活定制恰恰是场外交易 (OTC) 市场的特点。

B 选项正确。

- 交易所通过中央对手方清算 (CCP) 和每日保证金制度来管理交易对手风险。例如，芝加哥商品交易所 (CME) 要求交易者缴纳初始保证金，并每日根据市值进行结算，这种机制有效降低了违约风险。

C 选项错误。

- 交易所采用匿名撮合的交易机制，价格由市场供需决定，交易者无法选择特定交易对手或直接议价。这种标准化的价格发现机制提高了市场效率。

D 选项错误。

- 交易所交易通常通过电子系统执行，而不是通过电话记录。交易确认和争议解决依赖于交易所的电子记录系统，这提供了更可靠和标准化的交易证明。

考察: 交易所交易系统的特点及优势。(交易所交易特点：标准化合约、中央清算、匿名撮合、电子化执行)

2. A derivatives risk analyst at Global Securities is evaluating the risks of their bilateral OTC derivatives portfolio following a major counterparty's credit rating downgrade. Which of the following statements correctly describes a characteristic of bilaterally cleared OTC derivatives trades?

- A. The standardized documentation in bilateral contracts ensures consistent valuation methodologies across market participants.
- B. The bilateral clearing structure promotes market stability through its integrated risk-sharing mechanisms among participants.
- C. Position unwinding during market stress can be difficult due to limited liquidity.
- D. The bilateral market structure enables efficient price discovery through transparent trading mechanisms.

答案:C

解析:

A 选项错误。

- 双边 OTC 衍生品合约通常是非标准化的，这导致不同市场参与者之间的估值方法可能存在差异。缺乏统一的文档标准增加了估值的复杂性和不确定性。

B 选项错误。

- 双边清算结构实际上可能增加系统性风险，因为重要交易对手的违约可能引发连锁反应。双边市场缺乏统一的风险分担机制，每个参与者都直接承担交易对手的信用风险。

C 选项正确。

- 双边 OTC 衍生品确实面临流动性风险，特别是在市场压力时期，找到愿意接手复杂头寸的交易对手往往很困难。这种流动性约束是双边市场的固有特征。

D 选项错误。

- 双边市场的交易机制通常缺乏透明度，价格发现效率较低。由于交易是私下协商进行的，市场参与者难以获得完整的价格信息。

考察: 双边清算市场的特点。(双边 OTC 衍生品面临流动性风险)

3. A compliance officer at Pacific Trading is reviewing the operational differences between exchange-traded and OTC markets. She needs to explain to new traders which functions are typically performed by exchanges. Which of the following statements about exchange functions is correct?

- A. Exchange trading systems primarily focus on customized contract specifications to meet diverse trading needs through flexible arrangements.
- B. Facilitating direct price negotiations between buyers and sellers through private channels.
- C. Exchange membership requirements are designed to be inclusive, allowing broad market participation through simplified registration processes.
- D. Disseminating real-time price information through official market data feeds.

答案:D

解析:

A 选项错误。

- 交易所实际上强调标准化合约规范，而不是定制化。标准化是交易所交易的核心特征，这有助于提高市场效率和流动性。定制化合约是场外交易 (OTC) 市场的特征。

B 选项错误。

- 交易所采用集中撮合的交易机制，而不是双边协商定价。买卖双方通过中央限价簿进行匹配，私下协商定价是场外交易 (OTC) 市场的特征。

C 选项错误。

- 交易所实际上采用严格的会员资格审查和交易员注册制度，而不是简化的注册流程。这种严格的准入制度是为了确保市场参与者具备必要的资质和风险管理能力。

D 选项正确。

- 交易所确实负责通过官方数据渠道及时发布交易价格信息，这是提高市场透明度和促进有效价格发现的重要功能。这种实时数据发布机制帮助市场参与者做出更明智的交易决策。

考察:交易所的基本功能和特征。(交易所强调标准化、集中撮合、严格准入、信息透明)

4. Sarah Chen, a risk manager at Pacific Investment Bank, is analyzing potential issues with the mandatory central clearing requirement for standardized derivatives. She identifies two main concerns: (1) clearing members might reduce their risk monitoring efforts since the CCP bears most risks, and (2) CCPs tend to raise collateral requirements significantly during market turbulence. Which of the following concepts best describe Chen’s concerns?

- A. For the risk monitoring issue: moral hazard; for the collateral requirement issue: procyclicality.
- B. For the risk monitoring issue: adverse selection; for the collateral requirement issue: offsetting.
- C. For the risk monitoring issue: moral hazard; for the collateral requirement issue: offsetting.
- D. For the risk monitoring issue: adverse selection; for the collateral requirement issue: procyclicality.

答案:A

解析:

A 选项正确。

- 道德风险 (Moral hazard) 准确描述了第一个问题：当 CCP 承担大部分风险时，清算会员可能降低风险监控的积极性。顺周期性 (Procyclicality) 准确反映了第二个问题：CCP 在市场压力期间提高保证金要求，可能加剧市场波动。

B 选项错误。

- 逆向选择 (Adverse selection) 指市场参与者利用信息优势选择性交易，与风险监控动机下降无关。对冲 (Offsetting) 是指通过 CCP 净额结算减少双边合约，与保证金政策无关。

C 选项错误。

- 道德风险正确描述了第一个问题，但对冲与保证金要求增加的问题无关。对冲是 CCP 的优势，通过减少重复合约降低风险，而不是导致保证金增加的因素。

D 选项错误。

- 逆向选择不能解释风险监控积极性下降的问题，因为它涉及信息不对称导致的选择性交易。顺周期性正确描述了第二个问题。

考察:中央清算机制中的风险管理概念。(道德风险和逆向选择)

5. A junior risk analyst at an asset management firm is evaluating different financial obligations related to their clearinghouse membership. The analyst needs to understand which contribution ensures the clearinghouse can cover defaults by any member and cannot be withdrawn while the firm remains a member. Which statement about these financial obligations is correct?

- A. Maintenance margin is a long-term contribution that cannot be withdrawn and is used to cover defaults.
- B. Initial margin is a permanent fund that supports the clearinghouse in case of member defaults.
- C. Membership fee is a refundable deposit that acts as a financial safeguard for the clearinghouse.
- D. Guaranty fund is a non-withdrawable contribution that ensures financial stability in case of defaults.

答案:D

解析:

A 选项错误。

- 维持保证金是用于维持交易头寸的资金要求，随市场波动调整，不是长期不可提取的贡献。

B 选项错误。

- 初始保证金是为开立新头寸而缴纳的资金，随交易活动变化，不是用于支持清算所的永久基金。

C 选项错误。

- 会员费是加入清算所的费用，通常是年度费用，不是用于财务保障的可退还存款。

D 选项正确。

- 担保基金是清算所成员必须提供的非可提取资金，用于在成员违约时保障清算所的财务稳定，确保系统的整体安全。

考察：清算所成员的资金贡献类型。（清算所资金要求：维持保证金、初始保证金、会员费、担保基金）

6. The futures desk at an investment bank is preparing for the delivery of a physical commodity from a long futures position. The team needs to understand the role of the clearinghouse in this process. Which of the following statements best describes the clearinghouse's role in facilitating this delivery?

- A. The clearinghouse will coordinate the settlement with any eligible short position holders.
- B. The team must directly contact the clearinghouse to arrange delivery with a specific short seller.
- C. The team needs to settle the position directly with the original counterparty.
- D. The clearinghouse will only coordinate the settlement with the original counterparty.

答案:A

解析：

A 选项正确。

- 清算所作为每笔交易的对手方，简化了期货市场的实物交割过程。它接收卖方（空头）的交割通知，并将其分配给买方（多头），确保交割顺利进行。即使买卖双方未直接交易，清算所也能通过其系统匹配合适的交割方。

B 选项错误。

- 交易者无需直接联系清算所安排交割。清算所自动协调交割过程，确保交易的标准化和效率，减少了交易者的操作负担。

C 选项错误。

- 在期货市场中，交易者不与原始对手方直接结算。清算所作为中介，处理所有交割，提供了一个安全和可靠的交割机制，避免了交易对手风险。

D 选项错误。

- 清算所不仅与原始对手方协调交割，而是根据市场需求匹配合适的交割方。这种灵活性提高了市场流动性和交割效率。

考察：期货市场实物交割中清算所的作用。（期货交割流程：清算所角色、交割协调、交易对手管理）

7. A senior risk manager is conducting a training session on Central Counterparties (CCPs) for new analysts. During the session, several statements are made about CCPs' role in financial markets. Which of the following represents a common misconception about CCPs and their functions in the derivatives market?

- A. A key advantage of CCPs is that they enable market participants to exit CCP trades more easily than bilateral clearing trades, potentially enhancing liquidity in the OTC market.
- B. CCPs manage margin, netting, settlement, and default resolution, but any operational issues with CCPs can have widespread impacts because they handle more transactions than any single market participant.
- C. An advantage of central clearing is that it encourages the development of standardized documentation for OTC derivatives, which helps improve transparency and efficiency in trading.

D. While CCPs introduce moral hazard and adverse selection risks, they provide countercyclical benefits that help reduce market volatility.

答案:D

解析:

A 选项正确。

- CCPs 的一个关键优势是它们使市场参与者能够更容易地退出 CCP 交易，相比于双边清算交易，这可能提高 OTC 市场的流动性。

B 选项正确。

- CCPs 负责管理保证金、净额结算、结算和违约解决。然而，CCPs 的任何运营问题可能会产生广泛影响，因为 CCPs 负责的交易数量远多于任何单一市场参与者。

C 选项正确。

- 中央清算的一个积极方面是，它鼓励了场外衍生品交易的标准文件化发展，这有助于提高交易的透明度和效率。

D 选项错误。

- CCPs 确实带来了道德风险和不利选择风险，但它们并不产生逆周期性的优势。相反，CCPs 可能增加顺周期性，而不是逆周期性。这是因为 CCPs 可能会在市场压力时期加剧市场的波动，而不是减少。

考察: CCPs 的特点。（CCPs 可能增加顺周期性）

8. In the context of Central Counterparties (CCPs) and their exposure to model risk, consider the pricing of over-the-counter (OTC) derivatives using valuation models that employ mark-to-market functions. In this scenario, model risk could arise due to errors related to all of the following except:

- A. Tail risk.
- B. Volatility.
- C. Complex dependencies.
- D. Right-way risk.

答案:D

解析:

A 选项正确。

- 尾部风险是模型风险的一个重要来源，因为极端市场事件可能导致模型预测失准。

B 选项正确。

- 波动性是影响模型风险的一个关键因素，因为市场条件的变化可能导致模型估值不准确。

C 选项正确。

- 复杂的依赖关系可能导致模型风险，因为模型可能无法准确捕捉不同市场变量之间的相互作用。

D 选项错误。

- 正向风险（Right-way risk）通常不是模型风险的来源。相反，模型风险可能与反向风险（Wrong-way risk）相关，因为反向风险涉及市场条件恶化时风险敞口增加的情况。

考察: 模型风险的来源。（区别正向风险和错向风险）

9. In the event that a clearinghouse member is unable to fulfill its obligations in a transaction with another clearinghouse member, the clearinghouse will resort to a number of measures to ensure that contracts executed among members are made good. Which of the following presents the preferred method followed by clearinghouses?

- A. Under-margined positions at the defaulting member firm are liquidated along with all of the member’s proprietary positions and if that is insufficient, the defaulting firm’s membership may be sold and its deposit liquidated.
- B. The member’s deposit is liquidated and if that is insufficient, the clearinghouse draws down on a credit facility at a pre-designated bank, the cost of which is borne equally by all members of the exchange.
- C. The member’s deposit is liquidated and, if necessary, other member’s deposits are liquidated on an equal percentage basis; if that is insufficient, the clearinghouse then draws down on a credit facility.
- D. The clearinghouse has a credit facility at a pre-designated bank that allows it to make good on all contracts, the cost of which is allocated across all members of the exchange using a weighting scheme based on the outstanding positions held by the member.

答案:A

解析:

A 选项正确。

- 当清算所成员无法履行其财务义务时，通常会采取的措施是清算未满足保证金要求的头寸以及该成员的所有自有头寸。如果这些措施仍然不足以弥补损失，清算所可能会出售该成员的会员资格并清算其存款。

B 选项错误。

- 清算所通常不会首先依赖于银行的信贷额度来弥补违约损失，而是会先清算违约成员的头寸和存款。

C 选项错误。

- 清算所通常不会在违约成员的存款不足时立即清算其他成员的存款，而是会先尝试其他措施。

D 选项错误。

- 虽然清算所可能拥有信贷额度，但这通常不是首选的解决方案，尤其是在违约成本分摊方面，通常会优先考虑其他措施。

考察: 清算所违约处理的首选方法。（优先清算未满足保证金要求的头寸）

10. A member of a commodity exchange holds positions in multiple soybean futures contracts over several consecutive days. One soybean futures contract represents 5,000 bushels. Information about the futures positions and daily settlement prices is given below:

Position	Settlement price (in USD per bushel)
Long November soybean contract	Day 1: 10.00, Day 2: 10.20, Day 3: 10.10
Short January soybean contract	Day 1: 10.50, Day 2: 10.70, Day 3: 10.60

If the exchange has an automatic netting arrangement in place, what is the variation margin for the member at the end of day 2?

- A. The member pays USD 500.
- B. The member neither pays nor receives any USD.
- C. The member receives USD 250.
- D. The member receives USD 1,000.

答案:C

解析:

步骤 1：计算长仓的盈利。

- 长仓盈利 = $(10.20 - 10.00) = 0.20$
- 长仓盈利总额 = $0.20 * 5,000 = \text{USD } 1,000$

步骤 2：计算短仓的亏损。

- 短仓亏损 = $(10.70 - 10.50) = 0.20$

- 短仓亏损总额 = $0.20 * 5,000 = \text{USD } 1,000$

步骤 3：计算净额。

- 净额 = 长仓盈利总额 - 短仓亏损总额 = $\text{USD } 1,000 - \text{USD } 1,000 = \text{USD } 0$

步骤 4：计算变动保证金。

- 由于净额为零，会员在第二天结束时没有支付或收到任何金额。

考察：自动净差的计算过程。(需要理解 netting 的原理)
