

目录

1 考点 3:Definition of Operational Risk	2
题号 1 考察: 操作风险分类 (内部欺诈、外部欺诈、业务中断、实物资产损坏、执行交付管理)	2
题号 2 考察: 操作风险的定义与其他风险类型的区别 (操作风险不包括战略风险或声誉风险)	3
题号 3 考察: 操作风险量化的挑战 (操作风险量化需要复杂的模型和多种因素的考虑)	3
题号 4 考察: 银行风险管理原则 (强调合规性和内部控制的重要性)	4
题号 5 考察: 银行操作风险。(客户、产品和业务实践的范畴)	4
2 考点 3:Measurement and Management	5
题号 1 考察: 对操作风险资本计量的理解。(运营风险资本要求等于损失分布的 99.9% 减去预期运营损失)	5
题号 2 考察: 对操作风险测量的理解。(标准化方法和高级计量方法的比较。)	6
题号 3 考察: 对操作风险测量的理解。(操作风险 VaR 的估算方法。)	6
题号 4 考察: 不同类型 VaR 方法的比较 (特别是操作 VaR 和市场 VaR 在数据可用性、分布假设和建模方法上的异同)	7
题号 5 考察: 操作风险资本计算方法 (BIA、SA、AMA 的特点和应用)	8
题号 6 考察: AMA 核心要素 (内部数据往往不足以可靠估计尾部事件和新型风险)	9
题号 7 考察: AMA 建模要点 (分布假设选择、数据来源处理、情景分析应用、专家判断整合)	9
题号 8 考察: RCSA(了解一下 RCSA 的方法)	10
题号 9 考察: 教育与操作风险 (员工教育可以提高对风险的认识, 从而减少操作风险。)	10

1 考点 3:Definition of Operational Risk

1. Alex is a junior analyst in the operational risk department at Global Trust Bank. His manager Sarah asks him to classify recent operational risk events according to Basel Committee’s seven event categories. Which operational risk is correctly categorized?
- A. Reuters reports that a senior trader at Global Trust Bank manipulated the LIBOR submission process for three years, resulting in \$5 million illicit gains. Alex categorizes this as business disruption and system failures.
- B. The bank’s core trading platform experienced a four-hour outage during peak market hours, causing significant trading delays. Alex classifies this as execution, delivery, and process management.
- C. A severe earthquake damaged several branch offices in the coastal region, leading to \$20 million in property losses. Alex categorizes this as internal fraud.
- D. Local media reveals that external hackers breached the bank’s security system and stole sensitive client data, demanding \$3 million in ransom. Alex classifies this as external fraud.

答案:D

解析:

A 选项错误。

- LIBOR 操纵属于内部欺诈范畴，因为涉及员工故意违规获取个人利益。该事件包含了欺诈、故意违反规定等典型的内部欺诈特征，而不是业务中断和系统故障。

B 选项错误。

- 交易平台故障应归类为业务中断和系统故障，因为这涉及技术系统的运行中断。而执行、交付和流程管理通常指操作流程和交易处理中的人为错误。

C 选项错误。

- 地震造成的财产损失应归类为实物资产损坏，这类风险源于自然灾害或其他外部事件对银行实物资产的破坏，而不是内部欺诈行为。

D 选项正确。

- 外部黑客入侵和勒索属于典型的外部欺诈案例。这类事件由外部人员实施，目的是通过非法手段获取经济利益，符合外部欺诈的定义特征。

考察: 操作风险分类 (内部欺诈、外部欺诈、业务中断、实物资产损坏、执行交付管理)

2. A risk management consultant is conducting a training session on operational risk for new employees at a financial institution. During the session, several statements are made about the nature and scope of operational risk. Which of the following statements represents a common misconception about operational risk?

- A. Operational risk includes risks arising from operational errors, such as incorrect processing of bank transactions.
- B. Operational risk includes strategic risk or reputational risk.
- C. Operational risk is the risk of loss resulting from inadequate or failed internal processes, people, and systems, or from external events.
- D. Operational risk includes risks arising from computer hacking, regulatory fines, etc.

答案:B

解析:

A 选项正确，不选。

- 操作风险包括由于操作错误而产生的风险，例如银行交易处理不正确。这类错误可以直接导致金融机构的财务损失，是操作风险的一个典型例子。

B 选项错误。

- 操作风险与战略风险和声誉风险是不同的风险类型。战略风险涉及企业战略决策的不确定性，而声誉风险则与企业形象和公众信任相关。操作风险主要关注的是内部操作和系统的问题，以及外部事件对企业运营的影响。

C 选项正确，不选。

- 操作风险是由于内部流程、人员和系统不足或失败，或由于外部事件而导致的损失风险。这符合操作风险的广泛定义，涵盖了内部操作失误和外部事件（如自然灾害、恐怖袭击等）对企业运营的影响。

D 选项正确，不选。

- 操作风险包括由于计算机黑客攻击、监管机构罚款等引发的损失风险。计算机黑客攻击和监管机构罚款都是操作风险的组成部分，因为它们可能由于内部控制不足或外部事件而发生，导致金融机构遭受损失。

考察：操作风险的定义与其他风险类型的区别（操作风险不包括战略风险或声誉风险）

3. A senior risk officer at a multinational bank is tasked with enhancing the bank’s operational risk management framework. During a training session, the officer presents several statements to the team to highlight the complexities involved in quantifying operational risk. Which of the following statements is correct?

- A. Quantifying operational risk is more difficult than market or credit risk.
- B. Market risk modeling primarily relies on qualitative assessments and expert opinions, with historical data playing a supplementary role in risk estimation.
- C. Operational risk quantification benefits from standardized industry-wide loss data, making it easier to build reliable statistical models.
- D. Quantifying operational risk can be directly calculated by the probability of losses caused by cyber attacks and rogue traders.

答案:A

解析：

A 选项正确。

- 操作风险的量化比市场风险或信用风险更为困难，因为操作风险涉及的事件通常更为罕见和新颖，相关数据相对较少。这使得操作风险的量化需要更复杂的模型和方法。

B 选项错误。

- 市场风险建模主要依赖于历史数据来估算风险因素的波动性，并使用 VaR 等量化工具来衡量潜在损失。定性评估和专家意见只是辅助手段，而不是主要依据。

C 选项错误。

- 操作风险的量化恰恰面临数据标准化和可获得性的挑战。行业内的损失数据往往是分散的、不完整的，且难以进行标准化比较，这使得建立可靠的统计模型变得困难。

D 选项错误。

- 操作风险的量化并不是通过直接计算网络攻击和流氓交易者造成损失的概率来实现的。由于这些事件的罕见性和新颖性，相关数据较少，量化操作风险通常需要更复杂的方法和模型，而不仅仅是直接计算特定事件的概率。

考察：操作风险量化的挑战（操作风险量化需要复杂的模型和多种因素的考虑）

4. Foco Bennett is a bank trader who executed a trade without authorization. Although the trade ultimately resulted in unexpected profits for the bank, the action violated the bank’s risk management policies. According to the bank’s risk management principles, which of the following is the correct course of action?

- A. The bank should ignore Foco Bennett’s violation due to the profitable trade.

- B. The bank should immediately penalize Foco Bennett and strengthen internal controls to prevent similar incidents in the future.
- C. The bank should reward Foco Bennett’s profitable action while reminding him to adhere to compliance in the future.
- D. The bank should view this incident as a successful trading strategy and promote it to other traders.

答案:B

解析:

A 选项错误。

- 忽视违规行为会鼓励不重视风险限制的文化，可能导致更大的风险和未来的损失。

B 选项正确。

- 对违规行为进行处罚并加强内部控制是银行风险管理的重要措施，有助于维护银行的风险文化和合规性。

C 选项错误。

- 奖励违规行为会混淆员工对于合规性的认识，不利于建立严格的风险管理文化。

D 选项错误。

- 推广未授权的交易行为会破坏银行的风险管理和合规体系，增加操作风险。

考察: 银行风险管理原则（强调合规性和内部控制的重要性）

5. A compliance officer at a multinational bank is tasked with reviewing the bank’s operational risk events to ensure they are correctly categorized according to the Basel Committee’s guidelines. During a training session, the officer presents several scenarios to the team and asks which of the following events is correctly categorized as clients, products, and business practices?

- A. Authorities determine that some practices at a branch of the bank violate local workplace health and safety regulations.
- B. The bank is left unprotected against losses because the legal documentation related to a certain product is incomplete.
- C. A client engages in activity intended to defraud the bank.
- D. A department of the bank is found to have violated anti-money-laundering laws in dealing with certain foreign clients.

答案:D

解析:

A 选项错误。

- 银行分行的某些做法违反了当地的工作场所健康和安全法规，这属于合规性问题，但不属于客户、产品和业务实践的范畴。

B 选项错误。

- 由于某产品相关的法律文件不完整，银行未能保护自己免受损失，这属于文件和合同管理问题，而不是客户、产品和业务实践的范畴。

C 选项错误。

- 客户从事旨在欺诈银行的活动，这属于外部欺诈风险，而不是客户、产品和业务实践的范畴。

D 选项正确。

- 银行的一个部门被发现违反了反洗钱法律，与某些外国客户的交易中，这属于客户、产品和业务实践的范畴，因为它涉及到银行如何与客户进行交易和管理产品。

考察: 银行操作风险。（客户、产品和业务实践的范畴）

2 考点 3:Measurement and Management

1. A risk analyst at a large commercial bank is currently reviewing the Basel committee proposals regarding operational risk capital requirements. The analyst is particularly focused on the advanced measurement approach and how it impacts the bank's capital calculations. According to current Basel committee proposals, banks using the advanced measurement approach must calculate the operational risk capital charge at a:

- A. 99 percentile confidence level and a 1-year time horizon.
- B. 99 percentile confidence level and a 5-year time horizon.
- C. 99.9 percentile confidence level and a 1-year time horizon.
- D. 99.9 percentile confidence level and a 5-year time horizon.

答案:C

解析:

A 选项错误。

- 99% 的置信水平虽然是一个常见的风险评估标准，但根据巴塞尔委员会的要求，操作风险资本的计算需要在更高的置信水平下进行，以确保更充分的资本缓冲。

B 选项错误。

- 99% 的置信水平和 5 年的时间范围并不符合巴塞尔委员会的要求。虽然 5 年的时间范围可能在某些情况下适用，但在操作风险资本的计算中，1 年的时间范围是标准要求。

C 选项正确。

- 根据巴塞尔委员会的提案，使用高级计量方法的银行必须在 99.9% 的置信水平和 1 年的时间范围内计算操作风险资本要求。这意味着银行需要确保其资本充足，以覆盖在这一时间段内可能发生的操作损失。

D 选项错误。

- 99.9% 的置信水平与 5 年的时间范围并不符合巴塞尔委员会的要求。虽然 99.9% 的置信水平是正确的，但时间范围应为 1 年，而不是 5 年。

考察: 对操作风险资本计量的理解。（运营风险资本要求等于损失分布的 99.9% 减去预期运营损失）

2. A risk analyst at a financial institution is currently assessing the methodologies used for measuring operational risk. The analyst is particularly interested in understanding the implications of economic capital, loss modeling, and data sources. Which of the following statements regarding the measurement of operational risk is correct?

- A. Economic capital should be sufficient to cover both expected losses and worst-case operational risk losses.
- B. Loss severity and frequency are typically modeled using lognormal distributions.
- C. Operational loss data provided by data vendors often exhibit a bias towards smaller losses.
- D. The standardized approach assigns different beta factors to various business lines.

答案:A

解析:

A 选项正确。

- 经济资本必须足够覆盖与操作风险相关的预期损失和潜在的最坏情况损失。这意味着金融机构需要为可能发生的重大损失做好准备，以确保其资本充足，从而能够应对突发的操作风险事件，保障其财务稳定性。

B 选项错误。

- 虽然损失严重性通常使用对数正态分布建模，但损失频率通常使用泊松分布建模。这是因为损失严重性和损失频率反映了不同的风险特征。

- 损失严重性描述的是每次损失事件的金额，通常呈现出右偏分布的特征，即大多数损失较小，但偶尔会出现极大的损失。对数正态分布能够有效地捕捉这种特性，因为它允许损失值为正且具有较大的变异性。
- 损失频率则表示在特定时间段内发生损失事件的次数。泊松分布适用于建模稀有事件的发生频率，尤其是在时间间隔固定的情况下。它假设事件发生是独立的，并且在给定的时间段内，事件发生的平均率是恒定的。

C 选项错误。

- 数据供应商提供的操作损失数据往往偏向于较大的损失，而不是较小的损失。这种偏见可能导致对操作风险的高估，因为较小的损失数据可能被忽视，从而影响风险评估的准确性。

D 选项错误。

- 在计算操作风险的标准化方法中，虽然银行的活动确实分为几个不同的业务线，并为每个业务线计算一个 beta 因子，但并不是所有业务线的 beta 因子都是不同的。标准化方法允许某些业务线使用相同的 beta 因子。

考察: 对操作风险测量的理解。（标准化方法和高级计量方法的比较。）

3. A financial advisor at a wealth management firm is currently analyzing the challenges of estimating operational Value at Risk (VaR) compared to market and credit VaR. The advisor is particularly focused on understanding the unique characteristics of operational risk that complicate its measurement. Which of the following arguments is a valid argument for why it is difficult to estimate an operational VaR using the same framework as market and credit VaR?

- A. Market risk events are easier to map to risk factors than operational risk events.
- B. There is currently no quantitative method to estimate operational risk VaR.
- C. Market and credit VaR are estimated using frequency distributions only, while operational VaR is estimated using both frequency and severity distributions.
- D. Monte Carlo techniques cannot be used for operational risk VaR because the underlying risk factors are not normally distributed.

答案:A

解析:

A 选项正确。

- 市场风险事件通常可以直接映射到特定的风险因素（如利率、汇率等），而操作风险事件（如欺诈、系统故障等）则更难以量化和映射到相应的风险因素。这使得操作 VaR 的估算变得更加复杂。

B 选项错误。

- 尽管操作风险的 VaR 估算面临挑战，但实际上已经存在一些定量方法（如基于历史数据的模型）来估计操作风险 VaR。

C 选项错误。

- 虽然市场和信用 VaR 通常使用频率分布进行估算，但操作 VaR 确实需要同时考虑频率和严重性分布。这一特征并不构成其难以估算的主要原因。

D 选项错误。

- 蒙特卡罗技术是一种灵活的模拟方法，可以用于估算操作风险 VaR。尽管潜在的危险因素可能不是正态分布的，但蒙特卡罗方法并不局限于正态分布。它可以适应多种不同的分布形式，包括对数正态分布、伽马分布等。
- 通过蒙特卡罗模拟，分析师可以生成大量的随机样本，以反映潜在的损失情况。这种方法允许对复杂的风险特征进行建模，从而更准确地估算操作风险 VaR。

考察: 对操作风险测量的理解。（操作风险 VaR 的估算方法。）

4. A risk analyst at a large financial institution is comparing different VaR methodologies across risk types. During a methodology review meeting, the team is specifically discussing the similarities and differences between Operational VaR and Market VaR. Which of the following statements correctly describes the relationship between these two VaR approaches?

- A. Both Operational VaR and Market VaR require backtesting against actual loss experience for regulatory capital purposes, and both can utilize Extreme Value Theory for modeling tail distributions
- B. Both methodologies benefit from abundant historical data, with operational loss data being as readily available as market price data for model calibration
- C. Both VaR approaches typically assume normal distributions for their underlying risk factors, making their calculation processes highly similar
- D. Both methodologies can be effectively implemented using the same statistical distributions and parameter estimation techniques

答案:A

解析:

A 选项正确。

- 这个选项准确描述了两个主要相似之处：监管资本计算时都需要通过实际损失数据进行回测验证，同时两种方法都可以使用极值理论 (EVT) 来模拟尾部分布，这对于准确评估极端风险事件特别重要。

B 选项错误。

- 这个说法混淆了两种 VaR 的数据可得性特征。虽然市场风险数据容易获得且更新频繁，但操作风险的损失数据（尤其是极端损失事件）相对稀少，数据收集和整理往往面临很大困难，这使得操作 VaR 的建模比市场 VaR 更具挑战性。

C 选项错误。

- 这个假设过于简化。操作 VaR 通常需要更复杂的分布组合，如频率分布（泊松分布）和严重程度分布（对数正态分布）的组合，而不是像市场 VaR 那样可以采用相对简单的分布假设。

D 选项错误。

- 两种 VaR 方法在统计方法和参数估计技术上有本质区别。操作 VaR 需要同时考虑损失事件的发生频率和损失程度的双重分布特征，而市场 VaR 主要关注价格变动的单一分布特征，因此无法使用相同的实施方法。

考察: 不同类型 VaR 方法的比较（特别是操作 VaR 和市场 VaR 在数据可用性、分布假设和建模方法上的异同）

5. A risk analyst is reviewing the annual reports of Global Bank International (GBI). The gross income data for the past three years across different business lines is shown below:

Year	Retail Banking	Commercial Banking	Trading & Sales
2018	USD 400 billion	USD 700 billion	USD 800 billion
2017	USD 350 billion	USD 650 billion	USD 750 billion
2016	USD 300 billion	USD 600 billion	USD 700 billion

Which of the following statements about operational risk capital requirements is INCORRECT?

- A. Using the Basic Indicator Approach (BIA), the operational risk capital requirement for 2019 would be USD 270 billion (15% of average gross income).
- B. The Standardized Approach (SA) calculation using different beta factors (12%, 15%, 18%) results in a lower capital requirement than the BIA method.
- C. The Advanced Measurement Approach (AMA) requires modeling of both loss frequency and severity distributions.
- D. All three approaches are equally suitable for banks regardless of their size and operational complexity.

答案:D

解析:

A 选项正确

- 2018 年总收入: $400 + 700 + 800 = 1900$ 亿

- 2017 年总收入： $350 + 650 + 750 = 1750$ 亿
- 2016 年总收入： $300 + 600 + 700 = 1600$ 亿
- 三年平均： 1800 亿， $15\% = 270$ 亿

B 选项正确

- SA 方法 2018 年： $0.12 \times 400 + 0.15 \times 700 + 0.18 \times 800 = 293$ 亿
- 2017 年： $0.12 \times 350 + 0.15 \times 650 + 0.18 \times 750 = 272$ 亿
- 2016 年： $0.12 \times 300 + 0.15 \times 600 + 0.18 \times 700 = 251$ 亿
- 三年平均： 272 亿 $<$ BIA 结果

C 选项正确

- AMA 需要建立完整的损失分布模型，包括损失频率和损失严重性。这是最复杂但也最精确的方法。

D 选项错误

- 不同方法适用于不同规模和复杂度的银行，BIA 适用于小型简单银行，SA 和 AMA 更适合大型复杂银行机构。

考察：操作风险资本计算方法（BIA、SA、AMA 的特点和应用）

6. A regional bank's risk management team is preparing to apply for the Advanced Measurement Approach (AMA) for operational risk capital calculation. During a team discussion, several statements are made about AMA. Which of the following statements represents a common misconception about AMA?

- A. AMA requires modeling the loss distribution where loss frequency follows Poisson distribution and loss severity follows Uniform distribution.
- B. AMA calculates operational risk capital as the difference between the 99.9% one-year VaR and the expected loss after generating the loss distribution.
- C. AMA implementation often faces the challenge of insufficient internal loss data, thus requiring external data as a supplementary solution.
- D. AMA methodology requires appropriate scaling adjustment when incorporating external data, especially when using loss data from larger banks.

答案:A

解析：

A 选项错误。

- 损失频率确实使用泊松分布建模，因为操作风险事件的发生符合泊松过程特征，适合描述离散事件发生次数。但损失严重程度应使用对数正态分布而非均匀分布，因为对数正态分布能更好地捕捉操作风险损失的重尾特征，如交易欺诈、系统故障等重大事件的低频高损特性。

B 选项正确，不选。

- 资本计算采用巴塞尔协议规定的 99.9% 置信水平，通过 VaR 减去预期损失来确定资本要求。
- 例如，当某银行的 99.9%VaR 为 1 亿元，预期损失为 2000 万元时，操作风险资本要求为 8000 万元，这种方法能有效覆盖非预期损失。

C 选项正确，不选。

- 内部数据往往不足以可靠估计尾部事件和新型风险（如网络安全事件），因此需要引入外部数据来补充样本量并提供更多极端事件信息，这对于建立稳健的操作风险模型至关重要。

D 选项正确，不选。

- 使用外部数据时需要考虑规模调整（如资产规模 5 倍的银行数据需要 0.2-0.3 的调整因子）、地域差异、业务模式和控制环境等因素，确保外部数据与本银行实际情况相匹配。

考察: AMA 核心要素 (内部数据往往不足以可靠估计尾部事件和新型风险)

7. Michael, a quantitative risk analyst, is implementing the Advanced Measurement Approach (AMA) for operational risk capital calculation at Pacific Bank. He uses historical loss data and Monte Carlo simulation to model the loss distribution across different business lines. Which statement about loss distribution estimation is correct?

- A. Scenario analysis is primarily used to capture extreme events that have occurred in the past, making it the most reliable method for estimating both loss frequency and severity.
- B. External loss data can be directly applied to estimate loss severity when internal data is insufficient, without any scaling or adjustment.
- C. The loss severity typically follows a Poisson distribution, which models the number of independent events occurring at a constant rate over a fixed time period.
- D. Loss frequency can be estimated using either historical bank data or expert judgment from risk professionals after evaluating existing control mechanisms.

答案:D

解析:

A 选项错误。

- 情景分析的主要价值在于评估尚未发生但可能发生的极端事件，而不仅仅是历史事件的回顾。它补充了历史数据的不足，帮助机构识别和评估潜在的风险情景，例如新型网络攻击或前所未有的操作失误。

B 选项错误。

- 使用外部损失数据时必须进行适当的调整，需要考虑机构规模、业务特征和控制环境的差异。例如，大型银行的损失数据在应用到小型银行时需要规模调整，确保数据的可比性。

C 选项错误。

- 损失严重程度通常遵循对数正态分布而非泊松分布。泊松分布用于建模损失频率，而对数正态分布更适合描述损失金额的分布特征，特别是捕捉大额损失的重尾特性。

D 选项正确。

- 损失频率的估计可以采用两种方法：基于历史数据的统计分析和基于专家判断的定性评估。专家判断特别重要，因为它能够考虑当前控制环境的改进和新出现的风险因素，从而对历史数据进行必要的调整。

考察: AMA 建模要点 (分布假设选择、数据来源处理、情景分析应用、专家判断整合)

8. Taylor, FRM, a line manager in the Golden Bank, is running a training workshop to raise employees' awareness of operational risk losses. While preparing for risk control and self assessment (RCSA), key risk indicators (KRIs), and education, Taylor has made several statements to help employees to understand operational risks. Which of the statements below is most likely correct?

- A. A “whistle blowing” process does not encourage to implement to identify risk issues promptly.
- B. A high level of staff turnover can increase the likelihood of operational risks occurring.
- C. Educating employees about unacceptable business practices and creating a risk culture can be important in reducing operational risk, so more education is better.
- D. Interviewing operational risk professionals but not line managers and their staff are one approach of the risk control and self assessment.

答案:B

解析:

A 选项错误。

- 举报（“whistle blowing”）流程通常是为了快速识别和报告风险问题，增强透明度和员工的风险意识。

B 选项正确。

- 员工流动率高可能导致操作风险增加，例如因为经验不足、知识转移不足或流程不熟悉等问题。

C 选项错误。

- 虽然教育确实有助于降低操作风险，但更多教育并不一定是正确的。教育需要针对性和时效性，而不是简单地增加数量。

D 选项错误。

- 在 RCSA 中，仅采访操作风险专业人员是不够的，还需要包括一线经理和员工的参与，因为他们更接近业务活动和风险。

考察: RCSA(了解一下 RCSA 的方法)

9. A compliance officer at a multinational bank is conducting a training session on employee education in risk management. During their presentation, they emphasize that proper education can significantly reduce operational risks, but some common beliefs about employee training may actually increase risk exposure. Which of these training-related statements aligns with sound risk management principles?

- A. Employee education primarily serves to document compliance requirements, with minimal impact on actual risk reduction in daily operations.
- B. Product knowledge training should focus on highlighting positive features to enhance sales performance and market competitiveness.
- C. Legal disputes are an inevitable part of business activities, especially in the litigious environment of the United States.
- D. Employees should avoid using emails or phones in all communications to prevent information leakage.

答案:C

解析:

A 选项错误。

- 员工教育不仅仅是为了记录合规要求，它在实际风险管理中发挥着重要作用。通过教育，员工能够更好地识别和管理日常操作中的风险，提高风险意识，减少操作失误的发生。

B 选项错误。

- 产品知识培训不应仅关注产品优点以提升销售业绩，而应确保员工全面理解产品的所有特征，包括潜在风险和限制。这种完整的理解有助于提供准确的信息，保护客户利益。

C 选项正确。

- 法律纠纷在商业活动中是常见的，尤其是在诉讼环境较为严格的国家。企业需要做好法律风险管理，以应对可能的法律挑战。

D 选项错误。

- 虽然信息泄露是一个风险，但完全避免使用电子邮件或电话是不现实的。相反，应该教育员工如何安全地使用这些通信工具，以防止信息泄露。

考察: 教育与操作风险（员工教育可以提高对风险的认识，从而减少操作风险。）
