1 考点 1: 全球金融危机前的资本监管

1. As a result of the new Basel standards, every bank must now calculate explicit capital charges to cover operational risk using one of three approaches: the basic indicator approach (BIA), the standardized approach (SA), and the advanced measurement approach (AMA). Which of the following statements are true with respect to these operational risk approaches? I. In practice the AMA is the most stringent approach for operational risk II. The most popular method to satisfy the AMA is the loss distribution approach III. The AMA allows a bank to build its own operational risk model and measurement system comparable to market risk standards IV. BIA is widely used in insurance and actuarial science

- A. II only
- B. III and IV
- C. II and III
- D. None are correct

答案:C

2. According to the Basel Committee, which of the options below is not a quantitative standard that a bank must meet before it is permitted to use the Advanced Measurement Approach (AMA) for operational risk capital?

- A. A bank’ s risk measurement system should be sufficiently ’ granular’ to capture the major drivers of operational risk affecting the shape of the tail of the loss estimates
- B. Supervisors will require the bank to calculate its regulatory capital as the Unexpected Loss (UL) disregarding the Expected Losses (EL)
- C. Internally generated operational risk measures used for regulatory capital purposes must be based on a minimum 5-year observation period of loss data. When the bank first moves to the AMA, a 3-year historical data window is acceptable
